> unsuccessful. Does one exist?

Of course they existed. They'd sit in your car trunk with a vibrator
in the power supply, and there'd be a cable that ran from it to
the little control box that you'd mount under your dash, where you'd
have volume and squelch controls, a speaker, and a jack for the
microphone. They were big (the steel cases were heavy in themselves),
heavy, and drew a lot of current.

There were base equivalents, but they tended to be costlier and
maybe less common.

I suppose you could have bought these new, for big bucks, but
commonly you'd be buying them on the used or surplus market. The
two-way industry kept reducing bandwidth, and moving onto transistorized
equipment, and so hams bought the old stuff. This is exactly how
2meter FM really got going in the late sixties; if that surplus
2-way equipment hadn't been available at a good price, everyone might
still be using AM.

However, there was relatively little FM 2meter rigs specifically for
ham use. We are talking about a period on the cusp of when solid
state was more common than tubes. And in mobile and portable use,
there are strong advantages to solid-state. Once the surplus equipment
had shown the way for 2M FM, then you saw equipment specifically for
ham use. But, they were pretty much all solid-state. The tube rigs
were because they were available and cheap, but once someone started
spending real money for the stuff, you might as well get something
much lighter and with a much lower current draw.

The only tube rigs would have been right at the start, and for
a relatively brief period. Someone mentioned the Clegg; I can't
remember much about that one, but suspect if it was really all-tube,
it was basically a reworking of the Clegg AM rig of the time. Circa 1972,
there were plenty of solid-state 2M FM rigs intended specifically for
ham radio.

2. CCA First Wednesday AM Night July 3rd!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-01 00:45:31 UTC
From: Larry Saletzki <wa9vrh@ocslink.com>
Message-ID: <3d1fa11d_4@corp.newsgroups.com>
Source record: 40575

Hi everyone This Wednesday July 3rd is the next First Wednesday
CCA AM night on 3880 kcs.

Join us for the pre 4th fire works with some outstanding AM signals!

REMEMBER you DO NOT have to be running Collins gear to check in.
Everything is welcome!

We will have 4 main ncs. One on the East coast, Midwest, Mountain area,
and West coast. The main ncs will have others in their area helping with
their hour. (Please note ONE HOUR). At the end of their hour the main ncs
for that region will contact the next regions ncs and turn ncs over to them
etc.
etc. etc.

Each ncs will start at 08:00pm in their time zone.

Starting at 8:00pm EDT (00:00 UTC) East coast ncs will start the net
At 01:00 UTC East coast ncs will turn ncs to Midwest ncs
At 02:00 UTC Midwest ncs will turn ncs to Mountain ncs
At 03:00 UTC Mountain ncs will turn ncs to West coast ncs

comments please to wa9vrh@ocslink.com

Have fun and enjoy the great sounding AM signals. 73's Larry WA9VRH

>> 39.95 in 1952 was about equivalent to 270.00 today. It was not a cheap radio. <<

Try making a radio today in the USA using hand-assembled wiring and components (with or without vacuum tubes) and it will likely come out to cost $270+, regardless if its performance justifies that cost or not. That is why the Bose WaveRadio is darn expensive ($350+)... it is one of the last American-made radios.

Well, it wasn't cheap, but as far as shortwave sets went it was a
cheap radio. Straight currency translations don't always tell
the whole story, since people had to pay a heck of a lot more
for their electronic gizmos back then. A basic 9 tube "communications
receiver" from Hallicrafters or National went for well over $100, as
did a Trans Oceanic, which was itself a 5 tube radio. Certainly
the 9 tube sets and the Zeniths were much better radios, but at as
much as three times the price they better have been.

One of my favorite 2 Mtr rigs was a motorola desktop with a home-brew synthesizer on it. It was a fun project to build and I have since upgraded the circuit a few times to accommodate the great chips that have come out in the past decade for vcos, etc etc. The next mutation of my synthesizer will have a LCD display, memory storage/recall, and PL generator with tones that can be associated with stored channels. Not very cost effective since you can buy a new Icom 2100H for the amount I will have in the project, but hey, designing and building is what I do for fun! Anyone can open a UPS box.

Steve

>> Certainly the 9 tube sets and the Zeniths were much better radios, but at as much as three times the price they better have been. <<

And today we have come full circle. You can spend $1000 on a stereo system whose AM tuner sounds like crap and picks up maybe 2 or 3 stations on the whole dial, or you can spend $10 on a cheap pocket radio whose AM tuner sounds great and has the dial filled with stations, especially at night.

For example, try the Radio Shack "Pocket Size AM Radio", for a whopping $6.99. It is probably the cheapest new radio you can buy anywhere, and yet it has darn good reception and sound quality that would make most stereo systems costing 10 or 100 times as much jealous.

My first 2m FM setup was all tube. Early 70s. An Ameco TX-62 with the modified VFO, and an HQ-180A with outboard RME VHF-152? converter. Slope detection of course. The guys always knew when I was about to come on board as I had to swish the VFO and listen to the rcvr to get myself on frequency :-)

Message-ID: <afpl89$30pi$1@news.dp.net>
Source record: 40589

Hello...

I'm posting an E-Bay FA ad here. Not sure if proper, but my apologies up front if not. Someone please inform me "politely" if not.

I'm not a computer genius so will only make mention. You'll have to do some searching, which shouldn't be too difficult given how e-bay operates.

Listed:

2 - Motorola Rack Mount TPN 1106A 13V 15A Power Supplies (working) Fair to "good" condition physically

1 - Motorola Rack Mount 60 Watt Continuous Duty RF Amp
Needs cleaned up. Not sure if working. But did when pulled from service prior to storage. "Fair" condition physically

1 - Motorola Motrac VHF HI 150s range. A "tech" special. Rx works fine. Tx needs some work. Seems like a relay or PS problem to give you a heads up. I have no time nor need to repair it. It comes with control head, cable, mic, speaker. No key or manual. Good Condition physically.

Thanks for indulging me if I"m incorrect in posting here. As I said, if not proper - let me know for future reference.

Thanks,

Lou/Tech@DP.NET

Dead wrong Kevin. The crew at The Mountain created the WaveRadio with marketing as the primary basis for design. It was to be a quality product, cheap to manufacture, that could generate sales directly proportional to the budget spent on marketing campaigns which placed the product in a targeted market.

The marketing crew did a great job. They have created the image which has no basis in reality. It is an awesome feat to sell several hundred $50 radios for $600+ . You achieve the same profit as if you sold thousands at their true $50 value BUT do not have to maintain as large a manufacturing base (buildings, people, facilities mountainous, etc). You can scale your profits by marketing more... another TV infomercial, another ad in a yuppie magazine, etc etc......

As far as "American Made" goes, Bose doesn't emphasize that since it has no marketing value. (Think BMW, Lexis, Gucci, Mercedes, Browning, Movado, etc etc)

The Bose WeveRadio is an OK radio but I laugh at the suckers who pay to buy into the marketing hype and I sit in awe of the marketing machine that pulled off commercialization of this product.

Steve

The marketing of the Waveradio is impressive, they are advertised in the British Press as a luxury, must have item and they did semi-convince me that I really needed a Waveradio as part of my collection. I was therefore disappointed when I ran across one in person in a shop in Sweden. OK, I didn't have chance to listen to it but looking at the rather 'plasticky' build quality and the rubber control buttons it felt looked a bit cheap.

It certainly didn't make me wish to open my wallet there and then. OK, a radio is in the listening, I know, but I certainly hope the sound far exceeds it's image in build quality.

The Wave Radio is a grossly overpriced mediocrity -- and that's putting it kindly.

Basically, it's sonic crap.

A KLH Model Eight or Model 21 table radio provides a much more-pleasing listening experience, despite the fact that neither is stereo. Heck, the speakers in the Wave are so close together, you have to bend over and stick your head next to the unit to even begin to hear stereo.

The Wave has one and only one advantage -- it's a single-piece unit. If you don't mind larger speakers and the some cable clutter, you can do much, much, much better for a lot less money.

I have a Monsoon M-1000 speaker/amp system attached to my computer. It cost less than $200, and the sound is far superior to the Bose's. I bought a used Sony D-T66 Discman for $20, and plugged it into the Monsoon's second input for CD playback and stereo FM.

If I ever get the KLH Model 13 Multiplex Adapter realigned, I just might replace the Monsoon with the adapter and a Model Eight. Now, that would be a fun system!

As I always say, PROVE IT OUT before ASSUMING. It doesn't take much more to do that than the time you wasted by overlooking it - "thinking" it was ok.

I love reading repair tips, especially if I can use them in my shop to repair that of others.....

Another tip for you guys to keep in mind, one problem I had experienced. A resistor in the VFO section of the HW 101 was "barely" shorting to chassis. How it got there, I don't know. Not like anyone was in there or bouncing the rig around. But it all the sudden after a couple years, it just started acting up.

The radio would go dead from the top end of the dial i.e; 28.600 MHz and work it's way down "slowly". It did this on all bands - regardless which one I was on - until the rig seemed dead. Turning the rig off for a while cured it for a while. It "was" similar to a thermal defect. Once I moved the resistor away, all was well again.

<< I recommend replacing all of the old bad
capacitors >>

Replacing "bad"capacitors is always required.

But where did the silly idea of replacing ALL capacitors come from? I'll bet more good receivers have been destroyed while doing this than were ever made better.

I went to one of these links for a peek, and found a hint that one may also need to replace the mica caps for "instability" reasons. Now that is worse than "silly," it's plain dumb.

If one is into "restoring" receivers, one should start by obtaining minimal test equipment.

Don

Hi all

THIS WEEKEND G6SL/P - the callsign issued to Stratton & Co. in 1933 - will be on the air with the Eddystone User Group. Check out www.nomis.co.uk/eug for details and schedule.

Don't miss this rare event and get a SPECIAL QSL card for your collection.

All the best.

Simon

Actually, that "low background noise" that you are talking about is a function of the low system gain of the S-38C. Granted, you don't need any better than a 12dB noise figure to hear anything on shortwave, given a fairly good antenna, but it never hurts to have that extra gain, so you don't have to turn up the volume on very weak signals. Now, as far as that comment about ceramic filters.....I have been using them in my own designs for several years, and the distortion on my receivers from antenna input to speaker output is less than .5%.
In all fairness to you, Kevin, that distortion phenomenum with ceramic filters that you are talking about is a result of those filters not being terminated properly. Correctly terminated, you should have less than 1dB of passband ripple.
That S-38 is a pretty cool receiver though!

31. FS: Hallicrafters SX-42 receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-01 21:31:00 UTC
From: Bob Pierfelice <kb8tl@yahoo.com>
Message-ID: <ui1igo8948mr0b@corp.supernews.com>
Source record: 40504

For sale, one 1947-ish Hallicrafters SX-42 in working but somewhat ugly condition. I'm selling because we are moving and I need to downsize my collection of stuff.
See pix at: http://ftp.bay-town.com/~p15218/EBAY/SX-42/

Positives:
1) It works pretty darn good on all but one band.
2) All the knobs are correct and in good shape.
3) Tuning mechanism very smooth. Bandspread lock knob works as it should.
4) All the controls are in good shape as are the switches.
5) Sounds very good in all modes, FM is real HI-FI!
6) The chassis looks pretty good.
7) The front plastic trim pieces and the meter look very good.
8) It has been recapped with new disc ceramics and tantalums in low volts areas. Some out of tolerance resistors replaced.
9) No extra holes drilled in the chassis or cabinet. Both appear to be stock and not dented.
10) Comes with copy of the Sam's photofact

Negatives:
1) Needs front panel redone or replaced. New ones (maybe repro?) are about $110. It is fairly easy to remove the panel.
2) The cabinet needs stripping, sanding and repainting. It has some surface rust but it is very restorable. Needs elbow grease and paint.
3) 15-30 Mhz band is about 6-10 dB lower sensitivity than the other bands. I never did dig into this to find out why.
4) The meter needle sometimes sticks at the high end. Probably repairable or just a light tap "clears" it.

I'd like to get $150 for this famous boat anchor but I really have no interest in shipping it. I am conveniently located about 20 miles south of Detroit Michigan. Note that my ebay feedback rating can be found as user "p15218" at:
http://pages.ebay.com/services/forum/feedback-login.html

I did that FM mod to a Gonset IV and it worked pretty well with slope detecting for the rx.

My first FM 2meter setup was a General Electric Pre-Progress line. Ran that into a homebrew ground plane stuck on a broomstick outside my 2nd floor bedroom window. It was made from heavy wire soldered to a SO-239 connector. Guess that would have been circa 1970 or 71. It was single channel on 146.94. Worked great until they stuck a repeater on that freq.. hi.

I hear you on this one. You don't always get what you pay
for. I once owned one of those $1000 stereo with a deaf front
end on AM and FM. Now make do with cheap radio connected to
cheap computer speakers (with amp and subwoofer built in). Good
sound. Works for me!

I have never heard of anyone doing this, but the earoms do have a bad
reputation.... I suggest that you put a note on Keith's Racal page:

KEITHS VINTAGE RACAL SITE

where he maintains a notice board.
If there is not yet anyone who has done this then there will be others who
will be very interested in your results, me included :-) My 1792 memories
are fine at the moment, unlike my brain, but it probably won't last for ever.

I agree completely. A "wholesale" replacement of all capacitors in a receiver is usually uncalled for... test and replace only those that are badly out of tolerance and/or leaky. I deplore the term "recapped"... it implies that the device has been "restored to new", when, frequently, alignment hasn't even been checked! What ever happened to troubleshooting and diagnostic repair?

Unless a 1930s set has been extremely well kept its hard not to find
plenty of bad wax-paper capacitors. Many so-called 'working' sets can
be 'working superbly' once all the leaky/off-value caps have been
replaced. Call it preventive maintenance as opposed to
trouble-shooting.

> Frank Dresser

Thats kinda the point. Most are leaky enough to see even on a cheap
VOM. No need to get too exotic. I do about 15 1930-40s sets a year and
a good cap is a rare find...even in those 'working' sets. Most of my
projects are consumer sets that have been tossed into attics and
garages. Ham gear often tends to be better cared for and maybe doesn't
represent the extreme although a recent little Hallicrafters S-108 I did
had all bad caps...the pink plastic ones. Had some of those in my TO
Keyer too and they were all bad.
With an ohmmeter test (not to mention with actual voltage applied), I
toss anything that measures under a megohm. That generally means
wholesale recapping.

And if they rattle inside like maracas, then they are REALLY bad.

-Bill

48. Hallicrafters SX62A help needed.....

Hi All,
Does anyone know what kind of knob is used on the SX62A for the bandswitching function? I checked Chuck Dachis's book and it looks like the knob for the SX62 is different from the SX62A. I tried one of those nifty aluminum knobs (like on the S76) with the fins and it looked silly. Anyone have an SX62A that they know is all original?
As always, any help will be greatly appreciated....
rgds,
Mark S.

I recall this topic came up before but don't recall the correct answer.
Seems like someone had a manual for the 62A that had a b/w pic on the
cover. Maybe you can find that at bama?
FWIW, I've got a photo of a supposedly mint SX-62A and it has the same
knobs for tuning and bandswitch. Same shape and style as the big knobs
on a HT-37, HT-40 and many others with the exception that they are black
in color.

I think that resistor and the filter are what gives Heath the nickname
'Griefkit'
If they were built by the same methods Drake or Collins were...they would
probably be MORE trouble-free than the other brands.
Built by Joe Ham in his basement...with poor lighting, and anything can
result.
The Heathkits that I have that LOOK like they were carefully built...usually
work flawlessly, and with few or no problems.

Years ago (in addition to the many Prog, Pre-prog and Mot radios)
a neighbor buddy had a Gonset FM Communicator that was 4 ch, all
tube with CTCSS and built in AC and DC power supplies. Worked
pretty well. 30 watts or so. Pretty straight forward layout and circuits.

I think it was one of the last of the Gonsets.

I'm looking for a PRC-74 HF manpack tranceiver.

Buy or trade for a Spider Manpack set. The Spider is working on 30 to 108 Mhz with 0.5 to 5 Watt output 8 channels programmable via the frontpanel.

The Spider was produced in the late 1980's begin 1990's by a Philips company for the Royal Dutch Marine Core. You can se an add for this set at: http://www.telford-electronics.com/receivers.htm. Also the set is described in the 1989 Jane's Military Communications

Very good condition includes the backpack frame, standard Racal handset and a SEM52 antenna. The handset and antenna are not the original ones but are good replacements

Hi Mark,

I owned an SX-62 and an SX-62A in the 1960s. The early SX-62s had the goofy-looking aluminum knob, I think because the band-changing mechanism required more muscle. In the later run of SX-62s they changed to a matching round knob and continued it through the SX-62A line, presumeably the mechanism was improved and all the "armstrong factor" was no longer necessary to switch bands.
Enjoy.

I have the two round knob SX-62. The bandswitch turns hard. There's about a dozen wafer switches on it, and a ball bearing detent on the end. I don't think there's much room for improvement. It does use two setscrews, rather than one.

Generally, Hallicrafters knobs match the years, and not so much the models. Even worse, the numbers are the same. I have radios with tuning knobs which are all bakelite, bakelite with edge ring, bakelite with center "hubcap", one and two setscrew variations. Same number is molded in the back. This is from a company which often changed model number suffixes without making any noticable changes in the radios. Go figure.

That's my experience, as well. I replace all the paper caps. They deteriorate. After I'm done, I check some of them with my Heathkit cap checker. They all leak enough to close the eye tube, more often than not at 10% the rated voltage. Even so, the radios usually work with the old caps. Cathode bypass caps would almost have to dead short to cause a problem. Line bypass and plate to grid caps are the most critical. Still, I don't trust any of them. I figure they're all turning into unstable resistors at more or less the same rate, and it's the most sensitive areas that act up first.

I don't remember a Gonset FM rig either. They did have a VFO in the
early sixties (around the time of the 220 Communicator) that had a mic
jack for FM.

I'm not quite sure when Gonset faded out, but I'm sure they were gone
by 1970, and it seems closer to 1965. The only possibility that comes
to mind is that they made a rig intended for commercial use, that
we never saw in the ham magazines.

On the other hand, Clegg made some intriguing rigs right in those
days of the cusp between commercial and ham 2M FM equipment. I'm sure
they had a solid-state rig with a tuneable receiver and crystal controlled
transmitter; this would have been before the original FM-27 (which
had a "synthesized" receiver but crystal controlled transmitter,
followed by later versions that used the synthesizer on transmit too).

There was also a company, the name I can't remember, that had a
rig about 1972 that did both AM and FM, and had both tuneable receiver
and VFO for transmitting. One review called it a "solid-state
Communicator".

And Henry imported some rigs in those early days, one of which
was for 220MHz and had a tuneable receiver.

I have for sale in excellent condition a Dentron GLA-1000B amplifier. It covers 80 to 10 meters and I have the 10 meter mod to get on 10 meters which has not been done. This amplifier is rated for 800W CW and 1200 Watts (PEP SSB). The final tubes are (4) 6LQ6 and produce about 500 watts out. I would rated this a 9 out of 10 and is in excellent working condition. I do have the original box and original manual. I will take $350 plus shipping in the 48 states only. If you have any questions email or call (508) 821-2993....WZ1U Steve / Lakeville, Ma.

Pictures upon request !

67. Shelby NC hamfest

I am thinking about going to the Shelby NC hamfest, Aug 31 - Sep 1 -- I need to unload several years' collection of boatanchors at the flea market. However, I just received an e-mail from one of the club members there who said that people start showing up TWO WEEKS ahead of time to stake out space.

What's the use of going and lining up Saturday morning before dawn if all the tailgate space is gone?

Anyone here attend Shelby who can give me some advice?

Thanks.

Here's why --

I just got around to a SP-200 I bought at Dayton. Checked for shorts on all 3 of the B+ inputs and the bias - looked fine. Hooked up the PS, turned it on, and smoke started coming out of the variable cap/bandswitch compartment. Replaced all of the bastardly black bypass caps in there (about a 3 hour job). Checked again for shorts - all OK. Turned it on again and smoke started coming from the mixer screen dropping resistor. Yup - the bypass crapacitor shorted. Tried again - NOW smoke is coming from the detector transformer can. You guessed it - another one of those hateful black plastic bypass caps shorted. I may be slow but I get a hint - I replaced ALL bypass caps in the radio.

Not to do this is to risk frying a power transformer or other component. It's easy and makes a big difference in performance, since those old .01/600V waxies were pretty poor by today's standards.

If you want to stare in wonderment at the underside of an unrestored chassis, fine business - keep the caps. Me - I like to USE my radios.

71. FS: Majestic 130-A console radio and one other console

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-04 04:52:01 UTC
From: GS <greatsurplus@hotmail.com>
Message-ID: <3d22f037$1_2@news.meganetnews.com>
Source record: 40594

Hello all,

I have for sale a pretty nice Majestic 130-A console radio.
I have no idea if it works - I have not plugged it in and I don't
plan to. Also have a more odd console - labeled on the
back of the chassis 'Screen Grid Electric Receiver - US Radio
and Television' with a Magnavox speaker in the console.

Both are in very nice physical condition, and both are taking
up TOO MUCH SPACE in my garage.

I do NOT HAVE A CLUE as to value, and I have no way to ship
radios like this - big floor consoles with lots of wood.

Anyone in the Tacoma Washington area interested in them?

Please - come and make an offer and bring your truck. I don't
want to 'give 'em away' but I'm open to offers. They were part
of my brother's estate and I feel guilty selling them, but I have no
choice at this point.

If you are near Tacoma WA and want to see them, please email
me and we can work out the details.

>started coming from the mixer screen dropping resistor.

Applying full voltage to old electronics equipment that has not been powered-up
for a long time will frequently give you this result. Try doing it right.....
Use a variable transformer, such as a Variac, and bring the Voltage up very
slowly over the span of an hour or more.

I don't mind this type of ad, but I object to the ones that give an Ebay
address and don't say what the equipment is. I'm not going to go back on
line just to check.

>What's the use of going and lining up Saturday morning before dawn if all
>the tailgate space is gone?
>

Joe,

It's true that people do show up as much as two weeks in advance. However, the chances of them running out of tailgate spaces is just about impossible. The tailgate areas there are huge and I've never seen anyone turned away due to lack of space. This is one reason the Shelby hamfest is so large, because no matter how many come there is still room to spare in the boneyard.

If it uses a tube rectifier thats sometimes a moot point since the
rectifier may not start putting out until you reach 75-85 volts...by
then it may be too much.

Hello all...

I have a military radio set for sale it consist of c15 (vc102)

This unit was last used in desert storm as a complete comm. station.

I have taken the hf part of the station and that's what I have to sell.

The radio is all Collins VERY well built with gold silver and n connectors. it is an auto tune 2-30 mc with a control head that you turn to the freq. you want hit the key and it will tune to that freq. this unit has a airborne case that hold the 618-T,an antenna coupler and antenna base that come with a 32ft antenna that screws together like a surf rod. Also has an adapter that is use to hook to a wire antenna. It has two 3cx250bs in the final and puts out 400w ssb I also have 2 20amp powers supply I will throw into get you started. It will run the unit to test it but it needs about 50-60 amps to make it walk and talk. I used this radio last year and it talked and received ok so I will call it used and sell it as is. I also have an extra radio (618-T) that goes with this set. It has one part that's bad but it will work if you swap the part out with the other radio.

I will sell this as a set only and will ask 1800.00 this unit will have to be shipped by truck and can be picked up at my office in Houston, Texas 77043 or I will put it on a pallet for shipment and you can arrange a pre paid pickup with any company you like.

Also you can see this set in my garage if you go to this site

Slowly powering up may help old electrolytics, but I don't think there's any fixing paper caps/black beauties.

Hello all,

I have for sale for PICKUP ONLY in Tacoma, Washington:

Atwater Kent Model 38 - not tested. Looks all there and in
good shape.

Majestic Model 130-A beautiful wood floor console - also
appears all there - very nice wood. Haven't plugged it in,
but no reason to think it needs anything other than caps.

United States Radio and Television 'Screen Grid Electric
Receiver' - looks very similar to the Majestic above, also
in very good shape - nice wood, all there electrically and
tubewise, basically the same as the Majestic.

I also have an odd duck radio - a floor console that looks
like an end table. The tuning dial is built into a little door
on the top, and it's otherwise finished just like an end table
would have been in that era. Also untested, also seems
all there and an easy candidate for total restoration. I think
it's a Philco - but not sure until I 'un bury' it from behind a
wall of boxes in my garage.

I don't know values on these and I'm not out to 'make a killing'
- I just want them out of my way and I cannot ship them.

Photos on request. Again, Pickup ONLY in Tacoma Washington.
Email for my phone number and we can go from there.

Thanks to all,

David Ellison
greatsurplus@hotmail.com

Hmmm, correct me if I'm wrong, but it looks to me like the first line of his
message tells you exactly what he is selling.

Though it's true that describing an HRO-500 as "beautiful" might be
considered somewhat confusing.

It's cheapest to buy the individual electrolytics you need from a place like Mouser. Just mount them under the chassis with an added terminal strip if needed OR if you are a purist, carefully cut off the can and empty it. There's plenty of room inside for the new higher density electrolytics.

I'd just leave the can and disconnect the leads. Not many users as opposed to collectors look under the chassis and are concerned about completely original old style components.

Take the beauties out BEFORE powering up. Shine 'em up and sell 'em as
'original replacements' in the guitar section on ebay. Apparently
leakage gives a desirable sonic quality.

Two things to check:
power supply to see if it is holding the voltage
at the right level while loaded. Should handle
20 amps at 12v. (Mine had a bridge rect bad).
Second is the ALC circuit. It is the circuit
that controls the loading of the outputs. Check
to see there is a change when adjusting that level.
Good luck.
Mike

Hello,

In my junk box I have a bunch of 'rubber duckie' antennas
that have gotten mixed up. Some are for scanners and
the rest are for several HTX-202 2-meter HT's that I have.

Can someone please measure the 'stock' 2-meter rubberized
antenna and post or email the size? I can then compare and
weed out the scanner antennas.

Be exact - some of the oddballs are close in size.

Thanks for the help.

---------- Forwarded message ----------

HISTORIC MORSE CODE RADIO STATION
WILL RETURN TO THE AIR

Station KPH To Be Heard Once Again

In the third annual event that has become known as the Night of Nights historic Morse code radio station KPH will return to the air in commemoration of the last commercial Morse message sent in North America.

KPH, the ex-RCA coast station located north of San Francisco, will return to the air for commemorative broadcasts on 12 July at 1701 PDT (13 July at 0001 GMT), 3 years and one minute after the last commercial Morse transmission in North America. These on-the-air events are intended to honor the men and women who followed the radiotelegraph trade on ships and at coast stations around the world. Transmissions are expected to continue until at least midnight PDT (0700GMT).

For this third annual Night of Nights one frequency for equally historic coast station KFS will also be activated.

Veteran Morse operators, including many former KPH and KFS staff members, will be on duty at the receiving station at Point Reyes, CA listening for calls from ships and sending messages just as they did for so many years before Morse code operations were shut down.

The transmitters are located 18 miles south of Point Reyes in Bolinas, CA at the transmitting station established in 1913 by the American Marconi Co. The original KPH transmitters, receivers and antennas will be used to activate frequencies in all the commercial maritime HF bands and on MF as well.

KPH will transmit on 4247.0, 6477.5, 8642.0, 12808.5, 17016.5 and 22477.5kc on HF and on 500 and 426kc on MF. KFS will transmit on 17026.0kc. These frequencies have been made available through the generous cooperation of Globe Wireless, the

current owner of the KPH and KFS licenses.

Many of the transmitters will be 50s vintage RCA sets. Power output will be 4 to 5kW. The transmitting antennas include a Marconi T for MF, double extended Zepps for 4, 6 and 8Mc and H over 2s for 12, 16 and 22Mc.

Operators will listen for calls from ships on 4184.0, 6276.0, 8368.0, 12552.0, 16736.0 and 22280.5kc on HF and 500kc on MF.

KPH and KFS will send traffic lists, weather and press broadcasts and commemorative messages, many of which will be sent by hand. At other times the KPH and KFS "wheel" will be sent to mark the transmitting frequencies.

Reception reports may be sent to:

Ms. DA Stoops
P.O. Box 381
Bolinas CA 94924-0381
USA

Members of the public are invited to visit the receiving station for this event. The station will be open to visitors beginning at 1500PDT (3:00pm). The station is located at 17400 Sir Francis Drake Boulevard and is on the route to the Point Reyes lighthouse. Watch for cypress lined driveway on the right about a mile past the entry to Coast Guard station NMC.

KPH is operated by the Maritime Radio Historical Society in cooperation with the Point Reyes National Seashore, part of the National Park Service.

Further information may be found on the Maritime Radio Historical Society Web site at http://www.radiomarine.org or by contacting Richard Dillman at +1 415-990-7090 (email: ddillman@igc.org) or Tom Horsfall +1 510-237-9535 (email: wa6ope@hotmail.com).

Sadly, the way I interpret the FCC regulations ships cannot legally operate CW. Every US flag ship I know of has had its equipment replaced by GMDSS equipment. There's an FCC rule to the effect that equipment not required by the ships licence cannot be operated, and that precludes US ships (if they were lucky enough to have a qualified CW operator aboard) from using CW. KPH may get calls from foreign flag ships, but I'll bet they wont get many. I'll be listening.

Source record: 40637
Cross-posted to: rec.radio.amateur.boatanchors,rec.audio.tubes,rec.antiques.radio+phono

Seems to me there must be someone out there who has
come up with a chart of settings for testing the old 4, 5, and
6 pin tubes on a B&K 747??

The 747 is a good tester, but does not have 4, 5 and 6 pin
sockets. I oughta be able to make an adapter up that will
plug into an octal socket and then dial in settings that will
give at least a basic test of the 'old' tubes. I'm sure that
someone sometime has done this......

Any help out there? I'd sure appreciate it.....

In many cases there are octal versions of old 'standard base' tubes, so you would just use the settings for the octal versions (translating the pin numbers). For example 6A7=6A8, 78=6K7, 42=6F6 etc....

116. Boatanchor Satellite??

Newsgroup: rec.radio.amateur.boatanchors

From: cacutts@mindspring.com
Message-ID: <ag51i5ifa1@nntp9.atl.mindspring.net>
Source record: 40639

All,

With AO-7 back on the air after being off for over 21 years, is it the first boatanchor satellite? This old bird was put into orbit in 1974 and lasted until 1981 when the batteries died and shorted. Now it seams the batteries have opened up and now the satellite boots up when the solar panels are in the sun. In terms of satellites this is a boatanchor of a satellite being that old and still somewhat working. Maybe AMSAT should give out an award called WABS "Worked All Boatanchor Satellites". Or maybe AMSAT should think about putting a BC-610 in orbit next time.

Huh? A boatanchor has nothing to do with age, which is why I laugh
at people trying to sell their solid-state equipment here (apart from
the fact that this isn't a buy and sell newsgroup). It has to do
with size, and very likely that it uses tubes (though, I think some
solid-state equipment is big enough to be a boatanchor, and some of
it dates from a time when it probably could be classified as a
boatanchor).

I can't imagine the first OSCAR, which went up in December 1961,
as being a "boatanchor", even if it still existed. It was the new
age, the concept came out of Don Stoner's Transistor column in CQ,
and had neither the size or the tubes to be a boatanchor. From
there, it's really easy to realize that if the first ham satellite
wasn't a boatanchor, then anything since then can't be either.

I also have a hard time thinking of something that went up in 1974
as "old". I remember when it went up, though I remember OSCAR 6's
launch even more. In a few months, we will be seeing the thirtieth
anniversary of OSCAR 6's launch; that was a milestone because it
was the first ham satellite that lasted (I can't remember if an earlier
one was designed to last, there was 4 or 5 that landed in a skewed orbit),
and so it became a useable satellite rather than a novelty. It almost
seems like yesterday, even thirty years later. If you live through
something, it isn't as old as if you didn't.

I just bought a complete set of manuals for the T-368 transmitter and have some that are surplus to my needs. This lot consists of an original TM11-809-10 Operators Manual with amendments C1, 2 and 3 as well as an excellent copy of TH11-809-35 which is the Depot Service Manual for the T-3.

I am asking $15.00 plus postage for this manual package. If interested please reply by e-mail.

Best wishes,

Michael Crestohl

FOR SALE:

Collins 516E2 Power Supply for KWM-2 transceiver - runs on 28V DC.
Needs capacitors replaced inside. Otherwise appears to be complete
and ready to restore.
See picture on web page below...
Will sell for $49.00 plus shipping

WW2 British Mark 2 straight key. Contacts are still in very good
shape.
A few imperfections as you can see - not perfect,
but will polish up and restore nicely.
Missing two screws, but otherwise clean and in nice shape.
Picture available on the web page listed below...
Will sell it for $35.00 plus shipping

James Millen Company SWR Bridge Type 90671
Beautiful black crackle finish. No scratches or dents.
Serial Number 812. Has SO-239 connectors.
Has phono type output for 0-1mA meter.
Picture available at the web page listed below...
Will sell for $35.00 plus shipping

MFJ Keyer model MFJ-401 - non-working, but case is perfect and all
parts are there. Looks great.
This is the basic keyer with no memories. Has speed and weight
controls.
Operates on 9V battery. May just have a loose connection.
No time to troubleshoot, hence low price.
Picture available on request.
Will sell for $9.00 plus shipping

MFJ-1224 RTTY and CW interface with manual and cables.
Great for getting your computer to send and receive CW and digital
modes.
Built in radio modem, decoder and many refinements.
From the leader in affordable digital radio interfaces, MFJ.
Excellent condition. Looks just like new.
Will sell for $35.00 plus shipping

Hallicrafters S-108 Receiver in near-mint condition.
All original and in excellent working condition. Has the original
Hallicrafters tubes in it and looks imaculate inside and out.
Very clean, no scratches, no dents, no rust. Has obviously been kept
VERY well buy someone who appreciated fine radios.

Picture available on web page below...
Will sell for $225.00 plus shipping costs.

Source record: 40446

For sale: National NC-46 general coverage receiver in nice shape.
Pictures in http://ftp.bay-town.com/~p15218/EBAY/NC-46/
The radio really needs almost nothing as I re-capped (re-tubed and
re-reristored where needed) it about a year ago. The power switch is
defective and hard wired on. If you are looking for a "deco" style, late
1940s general coverage receiver, this is it. I'd like to get $75 for it and
would prefer pickup in the Detroit Michigan area.

Not to mention there is a wax paper cap between the hot chassis and
the outer steel cabinet. It may not have been a serious problem back
then, but after 50 years most paper caps have developed serious
leakage and should be replaced, especially those that can place a
user in harm's way.

Dont know that I have ever seen such a list, but most of the old-timers know which tubes are the same with different bases. But the RCA tube manuals from the 1950's in particular often make reference to which tubes are electrically similar, if you looked up a 41 for instance, it would give you the basing diagram for it and say the characteristics were similar to a 6K6, and you would then have to look up the 6K6 to get more information. Some of the more common equivalents found often in vintage radios are 41=6K6, 42=6F6, 6A7=6A8, 6C6=77=6J7, 6D6=78=6K7, 75=6Q7=6SQ7, 80=5Y3, 5Z3=5U4, 76=6P5, 25Z5=25Z6, 43=25A6.
If you wanted to make up an adapter for the tube tester, all you would need to do is take an old octal tube base and wire the 4, 5, 6, and large 7 pin sockets to it, connecting pin 1 to 1, 2 to 2, and so on. It would be easier and neater to mount the sockets on a minibox or similar. Then you would have to use both a tube manual to know which pin of the old tube was equal to the new tube you were testing it as and make the corresponding changes when setting up the tester to get the tube elements on the right pins.

Actually the 6Q7 is NOT the same as the 6SQ7 though they do serve the same purpose. The 6SQ7 has a higher mu
(100 vs 70) than the 6Q7 and they don't test the same in a tube tester.
The 6Q7 is the octal equal of the 75.

Other similar tubes 30=1H4G, 6P7=6F7, 6A3=6B4G, 19=1J6G

131. BC-1267-A question, for sale ?

Hi all,
I am new to the group and just have a question about a bc1267a. Is this boatanchor good for anything ? Can it be converted to a 2m amp ? Should I sell it and buy something usefull ? I have the power supply and the xcvr. Both are in great shape. The tags are still on both units. I think they are both new (well old, but never been used). I am not into boatanchors but if it can be used for a PA or ? I would keep it.
Post or e-mail replys ok. Just remove remove and nospam.

I just bought a small box of these tubes and am not exactly sure of what
I have. I spent a few fruitless hours using various search engines with no
result. So (crosses fingers), here is the best description I can give you.
They are *identical* in size, shape, and appearance to a ceramic 2C39
but are marked with the number "8533TA". The words "electronic tube" look
for all the world like RCA's marking but are marked "MPD" instead. Did I buy
a variant of the 2C39 (I hope) or did I get something entirely different?
There's more markings but they do not appear to be type numbers; probably a
datecode/lotcode.

The first S-38s used a hot chassis and rubber mounts. The mounts are standard grommets, available at most hardware stores and in the Radio Shack assortment pack. By the time of the S-38D, maybe before, they improved safety somewhat by using by using an isolated ground bus wire to the various terminal strips. By the way, leakage will only add to the amount current available at the cabinet. The cabinet to "ground" caps are about 0.2ufd for the S-38 models and about 0.047ufd for the later S-38D models, if I recall.

Thanks, Phil, I found everything I needed there. If I'd searched for "planar triode" instead of 8533, I'd probably have found that site. I still don't know what the different suffixes mean, but that should be fairly easy to find now. Looks like I made out alright at the hamfest after all; 12 ceramic 8533TA tubes for $15, new in the carton, plus a pair of 2C39's (glass envelope) too.
The rumor is that if you take a spanner wrench and remove the plate heatsink on ceramic case devices, a water jacket can be tooled that will increase the plate dissipation to 1/2 KW. I've got enough to be able to sacrifice one to find out. Has anyone else ever tried this or heard of this?

I'm looking for someone in the general south Florida area who can help me with the alignment of my Hammarlund SP-600.

I'm in the West Palm Beach area, and I plan to bring the receiver to you and take it back home the same day, so you need to be within reasonable driving distance.

Naturally, you must have both the equipment and the experience to do this alignment correctly. I have all the manuals necessary.

This doesn't have to be a freebee. Please e-mail if you can help.

Cheers,

Richard K.
Plam Beach Gardens, Florida

Yes, there is plenty of vintage SS gear that is hard to pick up, and uses analog geared tuning, so could class as a BA.

Also, I know some comm satellites used traveling wave tubes as broadband amplifiers. Don't know that any Ham sats ever did, but the TWT jobs would have to be considered BAs. 73, Mike K. AA1UK

Hi, thanks for the reply. I based the -12 and -12A on Ostermans'
Receivers Past & Present, 3rd Ed. My set says FRR-22 (which I believe
is the same as FRR/SRR-12). If there is a difference between -12 and
-12A, I don't know what it could be. But note that R-390 and R-390A,
look almost the same externally, but are entirely different internally.

Hello Doug, thanks for reply! Boy, I wish you were near Virginia!
So far, I have made sure the switches (top side of chassis) stop on
contacts; also believe I have the switch contacts aligned properly (but
you never know). I have replaced two of the little bellcranks that
clamp onto switch shafts and ride in the slide arrangement to switch
mode (filter) and band.

Also, I can get a calibration signal on most of the bands, but don't
seem to be able to get a signal gen signal through (using URM-25). I
suspect that either switches are not aligned properly or there is a
preselector problem (works on BC band with strong local signals). Oh,
well, will tackle again next time I have several free hours.
Thanks for the message.
Jim

A majority of power supply designs (e.g. Astron, Pyramid, others) are based on 2N3055 or 2N3771 (ECG181 replacement) pass transistors, the LM723 regulator IC and a Darlington like the TIP120.

David Metz, WA0AUQ has a schematic and associated article on this common power supply design.

If you are into homebrewing ham radio or hifi amplifiers, I have three NEW power transformers that are just taking up space. If you can use one or all, they're yours for pickup in Kenmore, WA.

All have dual primaries with taps. Two transformers have a single 55V secondary with multiple taps, the third (smallest) has two secondaries, one 50V, one 28V, both with taps. The 28V winding is rated at 8A continuous. The largest transformer is rated at 250A peak, 6% duty cycle. Any of these would easily power a solid state kilowatt amp.

If interested, call Terry at 425-485-3188.

I have done that with mixed results.

First there are some tubes that have a "clamp on" heat sink. Those were GE I
think.
They are easy to spot so that should not be a problem

Then I had one case where removing the heat sink resulted in destroying the
tube.
It turned out that they used glue (glyptol ?) to seal the threads.

So if the heat sink doesn't come off with just a little force, you might try
heating
the tube to free the glue (if there is any)

I seem to recall the late great Ham Radio magazine once ran an article on
modifying the 2C39 for water cooling. I gave away my magazine collection
years ago so cannot point you to the exact issue. Maybe someone else on
this list can. You might also search websites pertaining to ATV, as some
ATVers used to perform this mod.

Hello Jim: I maintained these for the Navy. Start with determining what portion of the spectrum it wont function in. Next, flip it over, look at the actuator slides that run belcrank on the rotary switches sticking out of the modules and be sure the switches stop on a contact, not stuck or touching two at once. You'll have to be sure all of the switching is tracking before attempting to align your reciever. Then, get out the alignment chart in the book. It's been a long time, so dont remember where to start, but be sure and follow it to the letter.

Sensitivity never was earth-shaking, but still should be well under a microvolt.

Those solder in tubes actuall work pretty well, but the biggest problem with this series is heat dissapation. Most troubles I found were heat related failures.

You'll need a good signal generator, mostly the URM-25 series is a good one. I think Fair Radio still has some. Be careful with the tuning slugs, as you can

break one easily.

I've still got several new, old stock tubes for those recievers, if you'd be interested.

157. New program COAXTRAP

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-07 18:15:00 UTC
From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <aga0f3$gf1$1@knossos.btinternet.com>
Source record: 40477

New program COAXTRAP.exe

Coaxial traps are often inserted in HF dipole antennas to isolate the ends of the wires from the the feedpoint thus shortening the effective overall length of the antenna. The antenna is then resonant in a higher frequency band. A trap is a parallel tuned circuit which is adjusted to resonate at the higher frequency.

A trap is constructed from a length of coaxial line wound as a solenoid on a cylindrical former. The program models the construction operation by assisting the designer to wind on turns until the required resonant frequency is achieved. The normal coaxial capacitance behaves as the high-voltage tuning capacitance although there is a transformer action in the manner of connecting the ends of the line together. This small program will be interesting even if the user does not intend to make any traps.

This program has been tested by me on only two actual traps - one using 75-ohm coax and the other 50-ohm RG 58 on different diameter formers and different numbers of turns. Errors in predicting resonant frequency were less than 1 percent but great care was taken with measuring and checking dimensions. It would be appreciated if any constructors who have a trap in the shack doing nothing could measure it up and check frequency. If anything is suspicious please let me have the data and how it was obtained. It is possible on my solitary pair of samples I could have made a common error. The best way to measure resonant frequency is to use an antenna analyser on the Z range. Use a thin single-turn coupling loop around the middle and 6 or 10 inches of loosely-twisted pair to the meter. Look for a very sharp peak in Z.

Download COAXTRAP in a few seconds from website below. About 31 kilobytes. Not zipped up. Run immediately.

I have the -11 and -13A. These receivers have the coolest frequency displays. I use the -13A almost every day, and the -11 sits on a shelf with the same symptoms as you describe.

I didn't realize that there was a -12A model.

Good luck.

I have one of the above units, c. 1977 vintage, that seems to be a
dedicated outboard digital frequency display for a particular radio.
It has three separate inputs (1st LO?, 2nd LO?, BFO?). Does anyone
have any information on this? What radio it goes with? Schematic?
I have the thing going now, I think, the question is what to do with it?

TIA,

First of all, a huge thank you to all who responded to my earler posting of "a sad story". It's gettin' happier, especially after the downloads from the BAMA site.
So: More questions. The entire front needs redoing, due to corrosion. Are the dial surrounds originally in flat or glossy black? And how do I restore a "new" gloss to the knobs? I've heard references to auto polish or wax...
Possibly the most complicated (or simple) question: Can someone explain the reference to making the wave forms "coincide" when aligning the crystal circuit? If it's anything like the old AR88, you had to sweep the generator back and forth, and try to pull the two waveforms together. Why would they be separated on the upsweep and downsweep? Does the crystal not behave the same on each pass? Or... is the reference to "coinciding" mean only the waveform height?
Thanks again, all!
Nelson

I wholeheartedly agree! Ebay has 'waned' compared
to several years ago, but the reputation of inflated prices
from back then still prevails.

I recently purchased MANY items on Ebay for a
FRACTION of their value, including an unbuilt
radio kit from 1954 that I paid $5.99 for!!! (The
ad was horrible, the pictures worse, and even I
didn't know it was an unbuilt kit).

I have also found many other items for WAY low
prices compared to newsgroups. I actually think
that some newsgroup prices are obscene these days
and Ebay is far more reasonable.

But there are always folks who bitch about things
they'll never attempt to understand - always have
been and always will.

Fine by me - keeps 'em off Ebay and from driving
the prices back up again!!

Just my $.02

> I actually think
> that some newsgroup prices are obscene these days
> and Ebay is far more reasonable.

Here we go again. Ebay sells *nothing*. The guys who are getting high prices on ebay are the *same* guys who buy and sell on the newsgroups. Ebay is just a venue; they take no part at all in the transaction. The seller just pays them for the use of the hall, just as sellers pay for a table at a hamfest. Prices are sometimes high on ebay, and increasingly here on the newsgroups, because the wide exposure lets the few people in the world who are willing to pay a lot bid against each other, raising the price. When you see that old boatanchor go for $5k, it's because there are maybe two people on the whole planet who want it that badly, and the internet gets them together. In the old days, this never happened because those two guys never showed up at the same hamfest at the same time. High prices for scarce goods like vintage radios is just one of the many unexpected consequences of the cheap, widespread dissemination of information

>

I'm not aware of any manufacturers specs for leakage, but I suppose they exist. The Heathkit IT-28 capacitor checker should be adjusted so it closes the eye at 2ma for electrolytics, 15ua for miniature electrolytics and 2ua for paper caps. Seems reasonable for finding deteriorated caps. This tester can test for leakage at voltages up to 600V, and that is helpful for finding caps which don't breakdown at low voltages. I've seen silver which has migrated away from it's plated area, and toward it's opposite plate, in the silvered mica caps inside IF transformers. I suppose something similar happens inside encapsulated SMs and paper caps. The paper caps also have moisture problems and also likely have pinholes in the paper, which makes it really easy for these caps to get leaky. Micas are almost always fine, paper caps almost never are.

The circuit is another consideration. How much extra voltage do you want on an audio control grid? Or how much extra can you load down a screen dropping resistor? Limits can be set, and answers can be calculated, but I'm not sure there's much point. The leakage of plastic dielectric caps is low enough to be considered zero.

A third consideration is self-heating. I don't know, but I'd bet there's a positive temperature coefficient to the capacitor leakage. Let 'em have enough current, and they will run away until they short, open up or cook themselves dry. Until the next time.

The above is for paper caps. Plastic caps are much more reliable. They don't often get very leaky. They rarely short or open up. Electrolytics can get leaky, but they usually fail by drying up and developing a high Equivalent Series Resistance. This is easy to catch, in circuit, with an ESC meter. I know there's specs for that, but I expect about 1 ohm or less ESC when I'm troubleshooting. More ESC is expected for smaller caps.

That may not specifically answer your question, but it's been my experience that leakage is a problem mostly with paper caps and sometimes with electrolytic. And I don't worry about a leakage limit for most caps. Paper caps deteriorate. I figure, even if they're OK today, they're gonna be bad someday soon enough. Other caps, aside from electrolytics, can be ignored

until failure.

Hi Jonnysocko,
I have a Silvertone 5656A pictured on my website (for the Western Historic Radio Museum) under Vintage Ham Gear. I bought my 5656A from a ham-pilot who would fly medical patients from rural areas to the larger cities in California for doctor/surgery appointments. During one of his flights he delivered the 5656A here to Virginia City.
On rarity, I have only seen the one I have. Now yours (via the jpeg) and I did see one show up on eBay about a year ago. Didn't go for too much (around $150) mainly because it just isn't well-known enough to have a following and therefore the high price. I think the 5656A would be considered fairly rare.
On performance, I find the set to be okay. It has some features like variable-coupled IFs and RF gain control that help the 8 tube circuit feel more like a ham receiver. Compared to many other ham receivers of the day though, it falls short. Price would have been the determining factor though and for its selling price, it was probably a bargin.
73,
Henry WA7YBS - Western HIstoric Radio Museum

Hi Jim:

If you look at the main schematic (the big, fold out in the manual), you'll see voltage and signal monitor points indicated. On SOME but not all of the modules, the test points were dabbed with red paint to make repairs easier. Use a good VTVM with an RF probe, or even better, a good calibrated scope for these measurements. They arent perfect, but will get you going enough to do a full alignment, so dont hang up on being a bit high or low. Presence of signal is more than a good sign...HI. Be sure you (lightly) lubricate the slides and bandswitch knob assembly as it's easy to strip the drive to the slides if there's a drag on the system. I always used just a touch of white grease with a lithium base.

I know that RCA had their own ideas of how to troubleshoot these little dandys, but I always had better luck in the case of a dead rx working from the last IF back toward the front end. But, since you've got at least one working band, I'd think the IF would be at least servicable. More likely, the trouble is in the front end, HF oscillator or mixer chain. If you use a scope, look for distortion in the HF drive waveform to the mixer. More distortion means more conversion noise and products.

If being sold by the pound, these would rank up there with the 390's for sensitivity. They are heavy.

We always took the nomenclature to mean: FRR-Fleet reciever, SRR Station reciever. Who knows? Think the FRR had more choices in power supply voltages, but that would be the only difference.

Anyhow, if you were here, I'd love to work on it with you. Sure had fun keeping these going before the Reserves got enough priority to get R390A's.

Best luck

73

(Since alot of you guys sell ham gear on
E-Bay, I thought you may like to read this
article)

07/08 09:37 www.bloomberg.com
EBay to Buy PayPal for About
$1.5 Billion in Stock (Update2)
By Greg Wiles

San Jose, California, July 8 (Bloomberg) -- EBay Inc., the world's largest Internet auctioneer, agreed to buy online-payment provider PayPal Inc. for about $1.5 billion to make it easier for users to send and receive payments on transactions.

EBay will exchange 0.39 a share for each PayPal share, the company said in a statement. That's an 18 percent premium to Friday's closing stock price. EBay shares fell as much as 4.4 percent in early trading.

About 60 percent of PayPal's business takes place on EBay, which plans to phase out the company's gambling operations after the purchase is completed. It expects about $13 million of costs a quarter related to the acquisition for stock-based compensation and the amortization of assets. EBay also said that second-quarter profit and sales were higher than forecast.
``It is very clear to us that EBay and Paypal can each help each other expand,'' Peter Thiel, Paypal founder and chief executive, said on a conference call with analysts and investors.

Other merchants also use PayPal's e-mail system, paying a fee on each transaction. Individual customers pay no fee to send or receive payments via their e-mail address after setting up an account with PayPal. The money is deducted from their credit card or checking accounts.
It will remain as an independent brand.

Mountain View, California-based PayPal said last month that second-quarter sales would be as much as $54 million and profit before some costs was expected to be 8 cents to 9 cents a share. It had first-quarter earnings of about $1.23 million, or 2 cents, on sales of about $48.8 million.
Paypal will replace EBay's money-losing EBay Payments by Billpoint unit, the companies said. EBay said it will phase

out Paypal's gaming business, which was projected to account for as much as 15 percent of sales, because of the regulatory issues involved with online gambling.

Shares in San Jose, California-based EBay fell $1.79 to $58.76 in early trading. They had dropped 9.5 percent this year. PayPal rose $2.56 to $22.56. PayPal was the first Internet company to go public in almost a year when sold 5.4 million shares in February. The stock had surged 54 percent since the initial public offering.

EBay's net income was about $54.3 million, or 19 cents a share, on sales of about $266 million. The company had said it expected profit of 17 cents a share on sales of $260 million to $265 million. It earned about $24.61 million, or 9 cents, on sales of $$180.9 million in the year-earlier period.

Both companies will release complete second-quarter results on June 24. EBay is forecast to earn 17 cents a share, according to the average estimate of analysts surveyed by Thomson First Call.

Hi,

I've lost (don't ask) the concentric knobs for the RF Gain/Clarifier
controls for my old Yaesu FT-901DM.
If anyone has a pair I 'd appreciate an email.

Tnx,

John VE3PCN

Will sell this NOT mint iambic keyer. Needs cleaning. Works very well. If looks don't matter but functionality does, this is for you.
Ask for pictures.
Will sell to offer or trade for radio equipment such as test equipment, accessories old receivers etc. What do you have just laying around (no dogs or cats).

Hi,

I have just acquired an HRO with a modified tuning dial - there is a Muirhead slow-motion dial attached to the front. The mod has been nicely finished and looks as though it could possibly be original.

Is this an original fitting, a service modification, or a later (amateur) mod perhaps ?

Any thoughts / ideas very gratefully received.

Martin

I agree. I've gotten great deals on Ebay and had more luck selling my stuff. I like the fact that theres a binding contract and a feedback rating system. On Ebay when the deals done its done! Heres a few of the great deals I've got on Ebay:
HQ-129X Working in great shape $100
S-20R Working needed new cord and filters $67
S-19R Needed caps replaced and rectifier tube $58
Leader 20mhz dual trace scope Excellent $42
Pro 2006 $210
SX-42 $137
And dozens of early SW/ BC sets and test equip. Ive gotten for under $50 restored and resold for a profit. Its done way more good for the radio hobby than bad by a longshot. Yes I miss the old days when the swaps and hamfests were packed with great deals but I've never seen so many rare or strange and interesting radios in one place as Ebay!
I will say this much for radio news groups. I've meet a lot of very smart and interesting people even though we don't always agree.

Measure the screen voltages on V1-V3. If they are within tolerance you might be very lucky. After finding two bad caps and associated resistors on mine, I bit the bullet and replaced 'em all. You only have to do it once. :-)

Source record: 40426

Jim,

I have some info on the SRR-13 (and the 11/12 and MRR/FRR cousins)
on http://www.roveroresearch.com. Just follow the links under
boatanchor radios.

The little crank arms or links on the modules are likely broken,
missing, or slipped. If they are not in the correct position
when the module is installed, they'll *never* be in the
correct position after any of the panel knobs are turned!

The projection of frequency from the glass plate (looks an awful lot
like a CD, but made 50 years ago) through mirrors to frosted glass
on the panel is as close to Rube Goldberg design as you can get.

They don't make 'em like this anymore, and they just might be right. :-)

202. Obscure question re:SAILOR HF Radio Telex system

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-10 04:34:15 UTC
From: Chris Anton <canton@mail.island.net>
Message-ID: <bPOW8.45310$8H1.2403484@news1.calgary.shaw.ca>
Source record: 40424

Hopefully someone on the list can assist with what I am sure is a fairly obscure question. I have acquired a SAILOR Radiotelex system which is made up of a:

Scanning Receiver Type R1121
US Exciter Type S1303
RadioTelex Modem Type ARQ H1240
Transmitter Type T1130A

This unit definately falls into the category of a big green commercial marine boat anchor (just in case the real anchor drags). With the four modules removed from the solid steel case the case alone must weigh close to 200 lbs. It was a two man job just to lift it to the work table. The units are solid state and like all SAILOR equipment, built like mini tanks.

The ARQ H1240 has a standard 25 pin computer plug for the console/monitor. Does anyone know anything about whether a standard RS232 compatible dumb style terminal can tie in to this unit or is it something totally proprietary?

I'd appreciate hearing from anyone who might have any familiarity with these units.

cheers
Chris Anton

From: 106312.1035@compuserve.com
Message-ID: <3d2c8985.730337@news.compuserve.com>
Source record: 40430

I have just picked up a National NC-2-40S receiver.

It is a rack version and I notice that in Ostermans book, the 40C and the 40 D are mentioned. The set I have has the centre circular dial as on the C but the square S meter of the D. Also, my set has only one phone jack, lower left, the righ bottom corner has a small chart holder. So, was the S version a military one ?

If anyone can help with the circuit diagram I would be most obliged.

cheers, Ben G4BXD.

Source record: 40433

I have a BC221 Frequency Meter, 125 - 20000 KC, made by Bendix Radio. In fair to good shape with calibration manual. I started a power supply and will include that also. Worked five years ago hasn't been touched since. This is not a museum piece but it did work and includes the calibration manual which is kinda rare (if you want to see one http://www.qsl.net/ab0cw/ral7.htm). Price is negotiable - plus shipping. It is heavy and I'd want to pack it really well. I don't need this one as I have a "brand new" one in storage.

I also have an Arc-5 shell - case - with the roller inductor and variable capacitor and dials. Best offer plus shipping.

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For Sale:

Lincoln 6 Meter AM transceiver. A genuine 1961 classic!

This shoebox-sized transceiver was sold by Allied Radio
in Chicago as a "step-up" from the Heath "Sixer", and is
a real beauty!

It's transmitter is crystal-controlled and plate modulated
for crisp and clean audio, with a power input of 7 watts.
The receiver is a sensitive superhet, with a built-in noise
eliminator and AVC. An RF stage precedes the receiver's
detector for excellent sensitivity and selectivity, and to keep
RF radiation to a minimum. Covers the entire 6 meter band
from 50.1 Mhz to 54 Mhz. The rig has a built-in A/C power
supply, or it can be operated using an external 12 volt DC
power supply (not included).

Here's your chance to own a rare "'60's classic" boatanchor,
and this one's in absolutely beautiful condition throughout.
Comes complete with operation manual including complete
schematic.

Just add a crystal and a mike, and join in the 6 meter AM
fun with this sharp looking little rig. Price is $75 plus $15
for very well-packed insured shipping (USA only).

If interested, please reply via e-mail for further information.

1) No,
2) 2.5 milhenries or more. The old type with multiple "pie" winding (National, Bud, Hammond) works well,

Source record: 40438

I know this is not radio but I want to use an old Atari Portfolio Hand Held computer for a packet radio terminal. I have the Portfolio but I need an RS-232 Serial Port card adapter that was an option for this unit. Any chance you have one that you don't use I will pay a fair price for one.

Thanks for reading and respond to w6lar@arrl.net

FS: Ameritron QSK-5 Solid State T/R Switch. External standalone model with manual. I bought it secondhand to use with a qsk rig that I ended up not purchasing. I never tried it out, but was told it works fine. The case has some marks, internal components look fine, no overheating etc. New price is $330, I will sell it as-is for $150 shipped conus Thanks
Tim

I have the 22 disk set of Windows 95 floppys.
I want to load them up on an old 'boatanchor' (sorry!)
486 laptop that I have.
About 4 of the disks are bad.
Does anyone have this set, and could email me the files I am missing.
If you have the floppys, I can tell you which ones I need.
Thanks to anyone in advance!
...Dave

234. Background/Info on Marconi CNY2 pse??

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-12 06:02:20 UTC
From: Keith M <g0gfq@hotmail.com>
Message-ID: <agmth6$m0b$1@news6.svr.pol.co.uk>
Source record: 40310

Hello

We have on display at the Muckleburgh Collection a Marconi CNY2 TX/RX, it is obviously naval but despite all our efforts we cannot find much information on it. The only scrap of detail we have is it was possibly used on Assault Landing craft, but have no evidence to prove this!

We would like get some concrete information on this and if we can find the manual, service sheet etc. get it back working again.

Surely somebody out there has one or do we have the only one ever made??

TIA:

And it doesn't get any better than that.

> They don't make 'em like this anymore, and they just might be right. :-)

Then what would we do woth our spare time? Drink?

Some of these tiny tubes are really hard, heat-wise, in the pc board in the
modules.

I find it to be a really pleasant receiver to use.

Thanks again for the resources you share with us.

Trying to modify an old BC 669 for CW use.

The 1964 CQ conversion manual uses a BFO unit out of a BC 312,
ie: 455kc with a tone control and on/off switch protruding from the "L"
shaped box. The freq is adjusted to the needed 385kc by adding C.

If you have one of these or anything similar, I'd like to hear from you
by email only please.

Thanks for the bandwidth and the read.

Source record: 40317

A few days ago I read here that
"KPH will transmit on 4247.0, 6477.5, 8642.0, 12808.5, 17016.5
and 22477.5kc on HF and on 500 and 426kc on MF. KFS will
transmit on 17026.0kc."

I am copying KPH on 12808.5 and 17016.5 Q3, S3 with a little Sony ICF 2001.
Sounds as if they just took the tape off and are hand keying it. Maybe not a
hand.
Anyway, I haven't heard them respond to any station yet, and I'm afraid they
wont.

No copy on 8642 and I don't think there's a prayer on any of the other freqs.
Anyone interested in copying real working HF CW might look for 4XZ on
14.582MHz. I found them yesterday sending five character ciper text at about
20 wpm and again today. Just like old times.

I have an SRR-13A, very similar to the set you guys have been talking about.
Same screen projection dial system, and sub-mini suldered tubes.
Tunes 2 to 32 MC in 5 bands.

But I've had her open and don't recall much Rube Goldberg linkages between modules when changing bands, selectivities, or modes. Maybe I didn't dig deep enough (it's hard to see past the top layer of circuit boards), or maybe this set is really quite different from the 12 series. Nice round, red RCA logo badge on panel.

Mine works OK except it cuts in and out -- I suspect the LO tube is weak and quits oscillating unless the line voltage drifts above 120 VAC. Somewhere (ha!) I have a little box of spare tubes, I think.

Two things others have said about the 13A set:
1. Dial calibration is poor, due to incorrect values of padding capacitors in series with the variable cap. I really noticed that!

2. Its main use on submarines was to help them dive faster. I gotta agree -- half the size of an R390(A), weighs just as much! 73, Mike K. AA1UK

Dear BA lovers,

I'd like to test 807's with my Eico 667 tester.
The tube type charts of Eico667 had 807's switch/bias setting.
However, there was no socket (5 pins) in the 667 for the test.

I believed that I needed an adapter of some sort for
807's to be tested with Eico667.

Can someone help? Thanks.

I would suggest building your own adapter. All you need is the pin out of one of the plate cop tubes that the tester can test and translate that to the socket on your adapter. The only pin that won't require anything is the plate cap wire. As far as construction, I would use a minibox with a socket for the 807 mounted inside and away from harm to bare hands, etc. You could then run some wires to an octal plug which would mate with the socket on the tester. This plug must also be covered to prevent accidental shock. No matter what else, be careful. You are dealing with HV's.

As far as I'm concerned, I now only use the 807's with the yellow liquid inside. :-)

251. Help! Need help restoring Philco Transitone

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-13 18:41:41 UTC
From: msenecal1@juno.com
Message-ID: <62bf14a6.0207131041.5d513233@posting.google.com>
Source record: 40323
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors

I just recently came into a nice old Philco Transitone. I don't have pictures of it yet, but it's small, a dark brown bakelite, with a speaker on the left, and a squareish white and gold tuning display on the right. There are two knobs right under the display. The whole thing looks to be from the late 30's, and looks like something that would be on a detective's desk in a noir film.

The problem is that the speaker was completely shot. In order to take it out, I had to remove the speaker transfomer, which was riveted to the speaker. I accidentally clipped one of the leads too short, and I don't think I can re-use the transformer(but may try). I have a speaker that will fit, but I can't find a match for the transformer. It takes 4 leads, and is labeled 5575. I have no idea how to match it. Anyone have any suggestions or ideas?

Thanks,

Matt

If you have the exact model number, you can get a schematic diagram at
http://www.nostalgiaair.com (Click Riders, then find Philco, etc...)

It probably uses a 50L6 or similar for audio output. This will want a
2500 Ohm to 4 Ohm transformer (assuming 4 Ohm speaker...). If you can
find a speaker with attached transformer, it will more than likely be
OK. A 5K to 8 Ohm one would work perfectly as well. If the speaker
truly is shot, drill out the rivets and reuse the transformer - splice
to the leads if you need to.

When my 13A was working, the audio was terribly distorted (well, not terribly,
just typical of a lot of military comm gear, only worse).

I have a bunch of Ham literature on how to fix shortcoming of the 13A (like the
rotten dial tracking), and ISTR that audio quality was also mentioned.

Sorry, my brain needs recapping and alignment! I opened up the 13A this AM and
sure enoguh, there is one push-pull linkage on top for changing modes and
selectivities, and another on the bottom for switching bands. Really neat and
compact, much smaller than the stuff in an R390(A).

But I'm not taking back what I said about the WEIGHT of this bugger!

Say, just how sensitive are the receivers in those clocks, and the cheap modern imitations? Here in Maine WWV is very hard to pick up well enough to understand the spoken times -- thank Canada for CHU! Sometimes 10 at night, maybe 15 during the day, and 5 MC is just a memory up here.

I'd think these clocks would need a very healthy signal from WWV to do anything.

> to the leads if you need to.
====
A 5000 to 8 Ohms transformer has a winding ratio of sqrt 5000 /sqrt 8 = 25
to 1.
If the impedence ratio is 5000 to 4 the winding ratio is approx. 35 to 1.
If you can't find an audio transformer with a winding ratio in that order
of magnitude which can handle the anode current of the tube, you could
resort to another transformer ,say 110 V in , 3 - 5 V out, or 230 V in , 6-9
V out.
Acceptable sound quality ? ...I don't know ,but it is worth trying .

Note : Finding winding ratio of any unknown traansformer ; apply approx
1V -AC to secondary winding (which should have the lower resistance of the
two windings) ,measure voltage across both windings (preferably with a
digital AC voltmeter) and determine their ratio.
For this test you can use any low voltage AC source ,preferably a
transformer with a variac.
If you have an audio signal generator and an audio voltmeter (most digital
handheld AC voltmeters nowadays are OK for up to a few kHz) you can get
adequate info on your transformer's frequency response by varying the audio
frequency while measuring the output of the other winding.

...Looking for 2nd Generation Heath Most Accurate Clock II (10 MHz only).
Offer commensurate with condition. Plug-ins and slave clocks a POTENTIAL plus
(maybe - maybe not).

Thanks, but NOT interested in original MAC (5, 10, 15 MHz scanner design).

E-mail above with details: Age, condition, significant dings, dents,
scratches...

Thanks July 2002

268. FS: Collins GOLD DUST TWINS

FOR SALE:

Collins Gold Dust Twins

75A-4 and KWS-1 Receiver/Transmitter

Very Good condition, including original manuals, fully operational.
Located in the San Francisco Area.
This is for pickup only, too heavy to ship.

Late serial on the KWS-1 early serial for 75A-4

Selling them because of a pending move cross country and I have decided not
to take them along. Hopefully they will find a new home here in the west.

$3000 OBO (you will not be disappointed)

272. Parts for the DF section of the R 1155

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-14 21:12:06 UTC
From: James Barnett <mail@nospamg7gijnospammers.freeserve.co.uk>
Message-ID: <3d31782b$0$8508$cc9e4d1f@news.dial.pipex.com>
Source record: 40338

Hi All,

Here are some parts for the DF section of the R 1155, you might have some of these bits in a junk box, because they were stripped out of the r 1155 so they could be modified with an in-built power supply.

Stores
L23 Trans type 132 10k/12138
L24 Choke type 71 10C/583
L26 Choke type 83 10C/2019
L27 Choke type 83 10C/2019

I am also looking for the m/s switch which switches the DF section on. Even if you know the values of the above parts that would be a great help. I have the circuit diagram to locate parts. its fig 10 simplified visual df circuit

Regards,

James Barnett

An AC transformer like this won't work (well) unless you place an air gap (fish paper) between the core "E" and "I" sections. The DC plate current will otherwise saturate the core. This in turn could "roast" your output tube.

Dave

> resort to another transformer ,say 110 V in , 3 - 5 V out, or 230 V in , 6-9
> V out.
> Acceptable sound quality ? ...I don't know ,but it is worth trying .
>
> Note : Finding winding ratio of any unknown traansformer ; apply approx
> 1V -AC to secondary winding (which should have the lower resistance of the
> two windings) ,measure voltage across both windings (preferably with a
> digital AC voltmeter) and determine their ratio.
> For this test you can use any low voltage AC source ,preferably a
> transformer with a variac.
> If you have an audio signal generator and an audio voltmeter (most digital

283. SM0VPO Homepages Update

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-15 08:40:18 UTC
From: Harry SM0VPO <someone@microsoft.com>
Message-ID: <agu2ot$h3v$1@newstoo.ericsson.se>
Source record: 40355

Hi all,

It's been quite a few months since I last posted anything here, in fact it is about a year ago. Harry's Homebrew homepages is now located at http://w1.859.telia.com/~u85920178/ where there are no banners to slow down the traffic. There are no outages due to excessive traffic since there is no bandwidth limit. It is just a bloody dificult URL to remember!

During the past year, I have been hounded by demands for payment to "freeservers.com" (or should that be "FEEservers"?) so I have moved the page http://sm0vpo.8m.com to http://w1.859.telia.com/~u85920178. Some of you may be aware that PMP3.NET was hacked and eventually closed down due to the misuse. This took away my free homepages that were kindly hosted by PMP3.NET.

There is a new messageboard too, also without banners. A new FAQ (Frequently Asked Questions) and FASQ (Frequently Asked Silly Questions). All the old ones have been kept, but some new ones have been added, Eg: "How many volts do I need to kill someone?". During the past 12 months, Harry's Homebrew homepages (http://w1.859.telia.com/~u85920178/) has had quite a few additions. Some of the latest project examples include:

EPROM AF Generator (still under construction).
WAV to EPROM conversion.
Many synthesiser projects.
DC-DC voltage converters.
150mW FM TX (88MHz - 108MHz) (technique Ok for 145MHz).
Synthesised FM TX (88MHz - 108MHz) (technique Ok for 145MHz).
Antenna Z bridge for Spectrum Analyser.
Antenna Questions & Answers (Eg: "Size isn't everything!").

H.H.H. now has just three sites, but no mirror sites. they are all located at:

PROJECTS - http://w1.859.telia.com/~u85920178
Unlimited bandwidth, Full site, No advertising, SWE

VISITORS CIRCUITS - http://hem.spray.se/lythall
Selected visitors submitted circuits - SWE

PDF LIBRARY - http://hem.passagen.se/sm0vpo
Unlimited bandwidth, Full site, SWE

So perhaps I may have the pleasure of a visit from you. Whatever you do, have fun with antennas, homebrew, radio and electronics in general. Very best regards from Harry Lythall - SM0VPO

You might be able to get it rewound. I know Peter Dahl company in Texas
does nice work on high voltage transformers. In the UK, you used to be
able to get Marinair to do some rewinding jobs.

Hi,

I'm trying to find the year my Novice call first appeared
in a callbook, and then try to obtain that year's issue.

I think I got my Novice in 1975 - WN7AWK was the
call (now is WB7AWK, with an Extra as of '97)

Could someone with a 1975 or 1976 callbook check on
that and see if I was ever listed with my Novice call?

Email me directly at unsolicitedmale@hotmail.com (my
'bring on the spam' address)

Or post here - I check often. And if you do have that
year, and want to part with it let me know that as well.

Thanks to all,

David WB7AWK
Tacoma, WA

The Philco TH-4 appears in Riders vol 11 Philco page 4 and 6.
The Philco TH-16 appears in Riders vol 12 Philco page 1.
You should be able to find both at http://www.nostalgiaair.org. Click on
the Riders Online link, scroll down to Philco, then down to your model
number.

Best regards

From: Tony Angerame <tangeram@lucent.com>
Message-ID: <agvhdu$5nb@nntpb.cb.lucent.com>
Source record: 40370

I got my info from Rovero's Super Pro Page or from Rich Post's Page but I don't now if their still current. I sanded down to bare metal, primed with a gray zinc chromate primer followed by a coat of gray gloss enamel. I used rustoleum either light machine gray or dark machine gray whatever suits you. I think both are close enough but there may be a site which sells super pro paint if you want to be authentic. I followed up by filling in the engraving with white enamel and a water color or hobby brush.. Some folks suggest a "Paint Stick" I haven't tried it yet. I wiped it off leaving a lite haze then buffed it out with auto rubbing compound. When you spray, I found that having it sit flat on the floor, on newspapers of course and spraying on a warm day caused the paint to dry very, very flat and produced quite a nice smooth finish.

The cheap immitations today are not receiving on the same freq as the MAC by Heath.
They use VLF signal of 60 Khz.
You will receive that no problem.

Hi Ken ...

No, your not off topic. I cannot identify your nice
antiqurian radio ... but I know who can.

Catch the real antique radio buffs at the following:

http://rec.antiques.radio+phono

Someone there will go overboard identifying the set.

Good luck!

I have for sale a nice WRL Model 755 VFO. The cabinet has been nicely repainted with the correct color paint. The Front Panel has original paint. It is good but there are some small spots where the paint has faded or been scratched. It is not bad, but does not look as nice as the repainted cabinet. Some of the white lettering has faded, but you can tell what all positions are. The black dial is good. The plastic covering is yellowed a bit but not cracked. The knobs are original and in nice shape. The tubes check good. The unit lights up and seems to work, but I have not checked it out on the air. There is some corrosion in the top copper chassis, but the bottom looks very nice. Price is $85 plus shipping from 79602.
Thanks, Charlie Hugg, K5MBX

Hey Guys..

I have a Drake R4B reciever for sale/trade.
It is in good physical shape,some pitting/discoloration on the copper chassis,some small holes have been drilled in the top cage (for mounting?) In nice original shape otherwise. It has newer tubes in it,and I have a spare set of new tubes,minus a 6EH5 for audio output(the one in there works.),and a copy of the manual. I was told that it was working,But don't really know enough about it to test it thoroughly.It glows nicely when turned on,and seems to work well.I was able to hear static,and hear noises,so I assume it would work well with a proper antenna and whatnot.It also has a couple extra crystals plugged into the rear.

$175 OBO As-is.I would trade for a good tube tester that tests transconductance and will allow me to match tubes. Email me if you're interested and we can talk over the details.

Nothing40.

327. FA: Electro Voice EV-638 microphone on Ebay - nice one

Newsgroup: rec.radio.amateur.boatanchors

All these items are left from a restoration of an HQ-110, and are
essentially all that's left that's good and useable.

Very nice unmodified faceplate with logo, reticles, and
centering knob:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1367107296

Mint condition bandspred dial:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1367107729

Very good condition (near mint) bandset dial:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1367108004

Complete knob set - all very good condition with good setscrews:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1367108248

Very good, working S-meter:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1367108628

Nice cabinet - a few minor surface scuffs and scrapes - no dents or bends:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1367108813

Power transformer with 'issues' - was working but needs some TLC to
make the wiring 'stay in place' - years ago someone used duct tape to
help the paper and everything is now brittle and needs some help:

Can someone give me a hand on adding the CW filter to the TS520S??
First, I want to make sure it is a YG3395C??
Then, do you just pop it in, tighten the nuts, solder the pins and....
remove two brown wires, or relocate them??
I'm sure its easy, but I don't have a manual,
Thanks....Dave

???????
Would anyone in this group be interested in purchasing reproductions of tube radio schematics for a fair price. I am buying what I can from Ebay and other sources and building up an archive of tube radio service information. I would probably charge about $5.00 for a single sheet schematic and $10.00 for a factory manual, printed and stapled, or loose sheets. This would cover my expenses for printer ink and make my money back on the purchase of the original manuals, which I would probably convert to a pdf or word document, then seal the manual in plastic for preservation. Does anybody think this is a good idea? I think it is a fair price for my time and effort, plus ink cartridges.
Thanks glow bugs,
Bill Baka

I would rather have docs on a CD. Do a good job of scanning the originals into jpgs or gifs, then stack them onto a CD. More work to begin with, but at this point, your costs drop dramatically. Burn a new CD for each order as you get them. Your cost per copy is quite low, and shipping is cheaper too.

Ed

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday July 21st 2002
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $5 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $20 for the first and
$15 for each additional at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 145.23- (PL 88.5) W1BOS/R and
W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

I agree. Although nothing keeps you from doing both. The problem is
publicizing the "service". How do you get the word out?

I'm fixing up Heathkits. The thing that's magic about Heath is
you get parts lists, clear diagrams that show you how to disassemble
the mechanicals, and detailed alignment instructions for "with
instruments" and "without instruments."

The CD compilation gives the buyer the sense of "great value". I just
ordered the Heathkit Schematic CD. The guy promises hundreds of
schematics. Of those, I might need 2 or 3. Ten bucks plus $3 shipping
seems real fair. His reproduction and shipping cost is less than a
buck so it's a nice profit for him.

For an actual original Heath manual, a big one, I'd pay $20-40 or
thereabouts. I might go $15+ for a good repro. For that, you'd want
to scan it in, maybe clean up the check marks, print it on a laser, not
an ink jet. 600 DPI Laserjet 4SI's are going for $200-400. These are
17 PPM departmental printers with optional duplexors. Print the cover
on yellow cardstock to resemble the original. The 4SI will do legal
paper but the newer HP's will print 11x17.

Figure on less than 2 cents per page for Laser toner bought on sale.
An inkjet will kill you on cartridge costs unless you refill the ink.

Source record: 40271

My T-4XC demonstrated similar intermittent power output...I did all the normal things you'd think of with no success (bandswitch cleaning etc.). Finally sent it off to John Kriner and it ended up going back to him a second time until he found the problem which ended up being the junction of CR6 and CR8 in the balanced modulator intermittently shorting to the can they're in. Once he'd positioned the diodes so they could not short to the can the problem disappeared.

Another thing you might look at is CR19 in the cathode circuit of the 12BY7. One fellow found his to have developed a crack and once he'd replaced it the power was fine. As an aside I looked at this diode too when I was first troubleshooting my rig and found that one end of that diode was in face a cold solder joint. I replaced the diode with a 1N4005 just for grins.

Check the Drake web site...there are lots of helpful notes there.

352. WTD: Schematic and/or manual for KW-500 linear amplifier

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-18 14:20:49 UTC
From: Roger Basford <Basford@btinternet.com>
Message-ID: <RQVaMNDB7sN9EwHH@btinternet.com>
Source record: 40275

Hi,

I'm looking for the circuit and/or the manual for a KW Electronics KW-500 linear amplifier. This was an early 60's BA made for the amateur market in Britain and used an 813 in (I believe) grounded grid configuration. If you can help please contact me via e-mail. I can take an electronic copy and I have access to A0 size photocopying. Any reasonable costs covered.

73,

Roger - G3VKM in Norfolk, England.

Source record: 40276

I've looked into this kind of thing too. I used to keep old back issues
of QST until it became available on CD. They are digital and cheap.
The problem with CD's though; they shatter into a million pieces if
overstressed, and are so soft that they scratch on anything. Even on
the plastic trays that are supposed to protect them. Like LP records,
though they can be protected with dedicated and careful handling and
storage. The advantage of certain digital files, is that they can be more
easily duplicated, distributed and are searchable.

The storage of paper manuals becomes a problem because of their
bulk. Photofact sets were about the best way to go for a number of
reasons... They were indexed, and you could make copies easily
because they weren't bound. I've seen people who stored manuals
for distribution pull the staples or grind the binding away (can always
be rebound) and store the pages loose in glassine envelopes. This is
the type of envelope that you see stamp collectors use. It doesn't
contain any acids, static electricity, and does not stick. They also
breathe, allowing proper humidity control. The down side... as your
collection grows, you have to buy more real-estate and hire librarians
to be able to find anything. There is probably no reason to do so
if a given manual has already been scanned. Store in stacking metal
file cabinets to prevent the spread of fire. NO SMOKING.

Scanning everything into a digital format is a lot of work, and you
will be screwed if the format you "save as" becomes unreadable or
not convertible in the future. We can instantly reject the file formats
that result in needlessly large file formats. Adobe Acrobat and GIF
seems to be the most popular now, with GIF being the most easily
convertible and true. The PDF format is pleasing to the eye, but
doesn't always convert a given page accurately. Lizard Tech's DjVu
format originally gave me problems when printing, but the quality and
compression are excellent.

Who are we kidding though. Museums, record keepers, libraries and
professional and government archives have been wrestling with how to
store media, and what formats to use since the beginning of time.
If you look around, much has been written already.

Jim, ac6tk

: > you get them. Your cost per copy is quite low, and shipping is cheaper too.
: >
: > Ed
: >
:
: I agree. Although nothing keeps you from doing both. The problem is
: publicizing the "service". How do you get the word out?
:
: I'm fixing up Heathkits. The thing that's magic about Heath is
: you get parts lists, clear diagrams that show you how to disassemble
: the mechanicals, and detailed alignment instructions for "with
: instruments" and "without instruments."
:
: The CD compilation gives the buyer the sense of "great value". I just
: ordered the Heathkit Schematic CD. The guy promises hundreds of
: schematics. Of those, I might need 2 or 3. Ten bucks plus $3 shipping
: seems real fair. His reproduction and shipping cost is less than a
: buck so it's a nice profit for him.
:
: For an actual original Heath manual, a big one, I'd pay $20-40 or
: thereabouts. I might go $15+ for a good repro. For that, you'd want
: to scan it in, maybe clean up the check marks, print it on a laser, not
: an ink jet. 600 DPI Laserjet 4SI's are going for $200-400. These are
: 17 PPM departmental printers with optional duplexors. Print the cover
: on yellow cardstock to resemble the original. The 4SI will do legal
: paper but the newer HP's will print 11x17.
:
: Figure on less than 2 cents per page for Laser toner bought on sale.
: An inkjet will kill you on cartridge costs unless you refill the ink.

From: plmills@attglobal.net
Message-ID: <3d373af7_3@news1.prserv.net>
Source record: 40281

As to the economics..... I make and sell CD's on eBay
with tube manuals and military equipment manuals and
have sold hundreds. Using a premium grade CD purchased in stacks of 100, CD
labels purchased in
a box of 300, slim-line jewell cases purchased in
lots of 100, a padded mailer, and first class postage
of 80 cents in the US, it costs between $2.50 and
$3 to make and mail one. Only by using a bargain
CD, no jewell case, no label, and a flat cardboard
mailer could you approach $1 if you include postage.

I scan my manuals into Adobe .pdf format. The only
pain is large schematics which I have to scan in sections.

thanks,
Phil

363. TRADE: National RAO-7 Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-19 01:59:40 UTC
From: Cal Barton <cal99@mindspring.com>
Message-ID: <ah7rhpgfb1@slb7.atl.mindspring.net>
Source record: 40286

I have a beautiful Navy RAO-7 receiver made by National. It has been recapped, retubed and professionally aligned. I have the original set of tubes, most of which bear the Navy designation, and they are all good. This receiver works great on all bands, far more sensitive than original specifications. It is in very nice cosmetic condition. The chassis is wonderfully pristine.

The receiver is general coverage, .5 - 30 Mhz in 5 bands. It was in extensive use by the Navy and on most ships in WWII.

I would like to trade for a ham-band receiver that I can couple with an Apache transmitter to make an AM station.

Please let me know if you are interested. The caveat is that this trade has to be face to face. I cannot ship this item, it is a true boatanchor.

Please e-mail if interested.

364. SB-303 LMO dead

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-19 03:04:29 UTC
From: "Joe S." <joe@schlatter.org>
Message-ID: <ah7vr902i0c@enews1.newsguy.com>
Source record: 40287

I pulled my old SB-303 out of the carton after six years of storage and fired it up. Only it didn't fire up.

I received signals fine on 40 meters and no other band, but when I switched back to 40 it seemed to be receiving on one freq only -- appears the LMO is dead.

I plan to pull the individual circuit boards and clean all contacts and switches -- but -- if it is the LMO:

1. Is there any place to get a replacement?
2. Is there a market for a dead SB-303?

Hi All....

I'm trying to find some of the original radio and antenna
equipment for my airplane; an Aeronca L3B "Grasshopper"...
(See http://home.att.net/~jm.price for picture)...

The specific equipment I need is:

RCA AVA-120 Trailing wire antenna
RCA AVA-126 Power supply
AG-40 Wind generator

The equipment in question might not have actually been manufactured
by RCA... I know that at least some of them were manufactured
by Continental Radio & Television Corp...

Any help would be appreciated

This doesn't sound like an electrical problem as the LMO would most
likely just be unstable, make intermittent raspy sounds, or would not
oscillate at all.

I don't see how the capacitor could move and the LMO act like it's
locked on frequency.

Unless it's a mechanical problem and the capacitor is not moving.

Mechanical problem. The way the LMO works is that the tuning knob
drives a short shaft with pinch washers on the end. The pinch washers
drive the inside ring of a metal hoop attached to the big plastic disk
that has the kHz numbers on it.

The backside of the big plastic disk is attached to the tuning
capacitor's wormdrive by a coupler held on by a setscrew. Your
setscrew is loose. Tighten it and you can tune again. Some of these
are blade screwdriver heads, some are allen heads. It takes an extra
long allen wrench to reach the setscrew.

Maybe we can work something out.

I have 3 functional SB-303's and a fourth on the way. I am restoring
SB-303's, I buy dead ones for about $60-$100 and bring them back to
life, a little more for better boxes with filters, a little less for
partially stripped hulks.

I started doing this, thinking that I would sell them on eBay. I've
put too much work into each one to sell.

For example:

SB-303 #2 was a smoked out, scuzzy box. I spent hours cleaning it, desmoking it, I've added an AM filter and have a CW filter on the way.

I've touched up the voltages, realigned the LMO drive until it feels like oil on glass. I space the knobs to 1/16th inch using a plastic feeler gauge. Some controls have to have flat washers added to shorten the shafts.

It takes me 15 minutes to clean a Heathkit knob, the dirt in the grooves are the hardest part and takes the most work. I use 100% cotton cloths for cleaning. Some knobs have loose skirts. I use a drop of superglue on the bottom to tighten the skirt. If the knob has a blade setscrew, I replace it with a stainless steel allen setscrew.

I oil all the controls, de-ox-it, space and align everything so that the pots are smooth and the switches click with as low friction as possible.

While I haven't done an electrical alignment, SB-303 #2 is hot, sensitive, and the audio is clear and strong. The LMO is stable. Strangely the big electrolytic capacitor on the power board is leaking. Also SB-303 #2's Xtal calibrator has low output.

Compared to modern rigs, these are fabulous. The feel of the big mechanical controls is superior. I would not sell SB-303 #2 for $400 and it's not done yet. I remember as a teenager in the 1950's and 1960's really wanting a good receiver. In 1963 I spent all my savings on a used SX-101A, these are better than the SX-101A.

I have repaired a tube style LMO but not the solid state units. I've looked in them and they are built in layers.

I'm pretty sure that your problem is mechanical and not electronic. If not, perhaps we can work something out.

The LMO tunes backwards from 5.5 to 5.0 mHz. For example, if the dial on 80 meters reads 3.5 mHz, the LMO is tuned to 5.5 mHz. As you tune up the band to 4.0 mHz, the LMO is going down to 5.0 mHz.

Before opening the LMO, check the rig voltages per the manual and make sure that the LMO external load is still on the back and is within spec.

Said it WAS receiving signals on 40 but now is not. Only one sig now
heard on 40...all across the band...so thats probably IF bleedthru.
I'd guess there's more than one problem. LMO may or may not be dead but
thats easy enough to check by listening on an outboard receiver...as are
the individual LO freqs.

I have an RBS-1 WW2 receiver that I need a manual for. I have done some searching and have come up with nothing, does anyone have a manual they want to sell or at least photocopy and I'll pay you for it?
Another question, my RBS-1's case is grey, rather than the flat black it would normally be. I was told that if a radio came into a service shop during the war, they would repaint the case grey , I think to signify a repair had been done, sounds strange, but the person I received the radio from swears that's true. Has anyone else heard this? Thanks!

I also suspect the Het Osc coil adjustment. I have encountered this on other radios. The xtal ages to another freq and may also lose some activity and the coil needs to be peaked again just to get it to oscillate. If you can receive 40 and the LMO is only from 5-5.5 why would you suspect it? I know I often suspect the worse on a new radio too. Try doing the Het Osc coil adjustments.

Chuck, I have the complete manual for the entire RBS/RBM-series receivers. It covers the RBS/RBM thru RBS-5/RBM-5. The manual is a digital copy of the original , done in half-tone where drawings are involved, and has 11x17, one-piece fold-outs. They're in very nice binders. Cost is $30 plus method of ship/mail of your choice. I have 4 of these receivers and they are pretty good. One thing, however! BEWARE of shorted NPC variable alignment capacitors in the tuning "modules". Each and every one of mine has had at least one of these guys short out, on one band or another. The failure mode is that the retaining collar (the little hex head) splits, allowing the rotor to spring back on the spider, shorting the whole thing out. Some of the stages have B+ on this cap and it will burn out a resistor. The notorious one in my sets has been in the LO. It quits, of course, except when its adjusted to the fully open position.. then it un-shorts and the LO runs. That's a key. Let me know if you need a book. I have about 6 of them left.
Regarding the gray paint? One of mine has a Boston Shipyard overhaul decal on it and it is black wrinkle...as are all rest of mine. And, I'm sure they've all been in a Navy shop at one time or another.....

Is the swapmeet at Pomona a radio related swapmeet or a general swapmeet? Is there a web page for this swap? If not, what are the particulars for this swapmeet?

I was thinking about running down to the Santee swap, but that is quite a bit farther away.

"Bill Horne"

The de Luxe Vibroplex had a decorative red insert which was placed
where the adjustable vertical tightness adjustment was.

Since the deLuxe jeweled movements were such that if abnormal
pressure was applied, the artificial jewel would crack, the top adjustment
which was used during WW2, was eliminated in the deLuxe versions of

the Lightning Bug, Original and the Presentation - which was the post WW2 "new" addition to the Vibroplex line which featured the excellent La-Hiff Adjustable Main-Spring - models of Vibroplex keys.

The top adjusting screw and thumb-nut were elimated making the bearing non-adjustable from the top which was more "operator ready" than the bottom!

The "hole" in the yoke (the upside down U shaped structure) was replaced with a red plastic decorative piece - which is often referred to incorrectly as the "jewel" of the Vibroplex - the jewels are hidden in the cups of the bearings in the key.

400. Re: SB-303 LMO NOT dead

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-20 04:16:16 UTC
From: "Joe S." <joe@schlatter.org>
Message-ID: <ahaocr01gk8@enews1.newsguy.com>
Source record: 40224

Fiddled around with it some more this evening. Dug out my equally old signal generator and shot signals at 3.5, 7.0, 14.0, etc. into the antenna. In each case, the SB-303 received those signals. Then, I tuned to a random freq in each band and swept the signal generator across the band -- I heard the signal as it passed.

Sounds like we need an alignment. I'll read the alignment instructions in the manual and get with it sometime this week.

Thanks for all the suggestions.

What did they paint it after it went thru the repair depot a SECOND or THIRD
time?

Should have used the resistor color code. Black original is OK, means 0 times
in the shop. Then paint it brown, then red, then orange ... by the time it's
gray, it's been worked over 8 times! Just kidding, it's been a long week :-)

Source record: 40226

I looked at eBay, and Phil's CD's are going for about $11 (postage included). My opinion is that this is just about right for a handful of manuals. He won't get rich at that rate, but it's at least a reasonable incentive. Most buyers don't realize the work involved in scanning in a manual (curse those HP pages that fold out about 48"). Putting manuals from paper onto CD's is a labor of dedication, providing more years of life to BA's.

BA's are unique, in that dead BA's can usually be fixed. There's enough space to stick in test probes and replace individual components. Having a manual can make a tough repair into a fun job.

Comments about the archival method are valid. Imagine someone who archived their collection of 78rpm records onto 8-track cassettes. The cassettes may still be good, but just try to find an 8-track player. But, if we stick to a widely accepted file format (pdf, gif, doc or jpg), we will get an archive that will be readable for quite a few more years. And, when CD's eventually become obsolete, somebody will be able to do an automated port into whatever new format prevails.

If you allow me a bit of slack in predicting the future, I think that in another 50 years, our BA's will still be a viable hobby. Electronics from the 80's onward will be under-represented, since much of it is based on proprietary chips and processor code, and built to such small size that you can barely find the chip, let alone probe a connector pin for a signal.

405. help with HQ-145A

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-20 10:19:02 UTC
From: abrayten@aol.com
Message-ID: <20020720061902.15583.00000211@mb-ca.aol.com>
Source record: 40227

Last night I hooked the single wire antenna from the back of my HQ145A to my 80 and 40 meter dipoles to see if this improved reception on the AM broadcast frequencies. Each leg of the dipole was hooked up to the end of this single wire using alligator clips. It did improve the S-meter readings, however there seemed to be a little distortion, and there were also times when the signal boost did not seem to be maintaining its initial strength. In addition to this, below about 700 Hz, I get a buzz with no AM station reception to speak of. I am not sure why this bottom end of the end band seems dead, and am hoping I didn't blow something out in the receive section. Considering this old tube type receiver, what do you think? Last night I hooked the single wire antenna from the back of my HQ145A to my 80 and 40 meter dipoles to see if this improved reception on the AM broadcast frequencies. Each leg of the dipole was hooked up to the end of the single wire using alligator clips. It did improve the S-meter readings, however there seemed to be a little distortion, and there were also times when the signal boost did not seem to be maintaining its initial strength. In addition to this, below about 700 Hz I get a buzz and no reception. I am not sure why this bottom end of the end band seems dead, and am hoping I didn't blow something out in the receive section. Considering this old tube type receiver, what do yo think? Drew KD4QCX

417. HELP: SB-303 experts

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-20 22:48:35 UTC
From: "Joe S." <joe@schlatter.org>
Message-ID: <ahcpha027j@enews4.newsguy.com>
Source record: 40239

Several folks with SB-303 experience replied to my earlier post. Here is what's happening to my SB-303.

First, it was stored since 1996. I pulled it out of the carton, plugged it in, and this is what I found.

After twiddling the knobs and shooting contact cleaner on the switches, it fired up and received like a champ on all bands -- tuned smoothly, S-meter bounced around per signal strength, etc.. I left it running for a few minutes and when I returned, it was dead.

1. Using my old Heath signal generator, I inject a 3.395 MHZ signal into the input of the IF circuit board -- the S-meter goes against the pin and a huge signal comes out of the speaker.

2. I then tune to any band and inject a signal into the mixer input. The receiver receives a VERY weak signal, no S-meter indication. If I tune the slugs in the respective RF amp and HFO coils, I get definite peaks in the signal, but it remains very weak.

3. Same thing happens if I inject a signal into the input of the RF amplifier board -- weak signal received, no S-meter indication.

4. If I tune to any band and inject a signal into the antenna connecter, I get NOTHING. For example, I set the receiver on 7.150 mhz, connect the signal generator to the antenna input, and sweep it across 40 meters -- nothing.

5. BUT if I connect the signal generator to the input of the antenna board on the receiver, and sweep the generator across the band to which the receiver is tuned, I get a signal, similar to paragraphs 2 and 3 above.

Also, the dial lamps do not work -- all the bulbs are good and there is voltage across the transformer leads that provide voltage to the lamps. The crystal calibrator is not working, either.

I plan to pull out the RF attenuator pot and see what that does -- meanwhile, do any of you SB-303 veterans have any suggestions?

THANK YOU.

Fixed it!!

Problem was the RF attenuator control. It's a 600 ohm linear taper pot.
One end is grounded, one end goes to the input of the antenna switch board,
the wiper goes to the antenna. The control was open and the submini coax
feeding it was shorted. I pulled it out, cut off the coax, and now have a
clip lead from the antenna jack to the input of the antenna switch board and
the receiver is working fine.

Fixed the dial lights, too. All the bulbs tested good for continuity --
replaced them one at a time and one of them was bad in spite of testing
good.

And, the calibrator works.

Think I'll touch up the alignment. Local parts place will have a
replacement pot for the attenuator and I will replace the submini coax on
Monday.

That's a nice looking radio Jim, I had one of those and a SB-300 back in the very early 70's. I always liked those flip up cabinets.

I'm sure you'll get a good price for it.

Pretty much. There are some guys who'll say that 6m never went away ;-)

There's been a goodly amount of 6m activity around. There are areas of
the country that do still have pockets of 6m AM activity, as well.

You might do better to ask such a question in the AM circles.

Go googling for "The AM Window" website.

--
Regards,
-Jeff

: Is there still any "AM fun" on 6m anywhere? Is 6m still in use anywhere? It
: was pretty dead in Chicago area by late 70s. Pretty well killed off first by
: SSB prcing the band out of reach of many, and then 2m repeaters put the coffin
: nails in. Is 6m making a comeback?

436. Re: help with Hammarlund HQ-145A

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-21 12:11:22 UTC
From: jeff <w5omr-anti-spam@w5omr.antispam.shacknet.nu>
Message-ID: <Kxx_8.154252$eF5.4040729@twister.austin.rr.com>
Source record: 40158

: Last night I hooked the single wire antenna from the back of my HQ145A to my
80
: and 40 meter dipoles to see if this improved reception on the AM broadcast
: frequencies. Each leg of the dipole was hooked up to the end of the single
wire
: using alligator clips. It did improve the S-meter readings, however there
: seemed to be a little distortion, and there were also times when the signal
: boost did not seem to be maintaining its initial strength. In addition to
this,
: below about 700 Hz I get a buzz and no reception. I am not sure why this
bottom
: end of the end band seems dead, and am hoping I didn't blow something out in
: the receive section. Considering this old tube type receiver, what do yo
think?
: Drew KD4QCX

700 Hz, or 700kHz?

The distortion you were hearing, was probably front-end overload.

As for the 'buzz' at the bottom of the band, I'm going to assume you're talking
about 700kHz, and you probably are getting some noise from your computer,
fluorescent lighting, harmonics of 60hZ..

I'm not -that- familiar with an HQ-145, but I think it's got a couple of posts
on
the back for antenna connections (vs. an SO-239 coax connector) and if you
only have a single wire connected, then that's not a balanced load to the
receiver and yeah - you're gonna get some 'other' stuff, along with the rest
of the world.

Make a Loop antenna out of clip leads. Run a piece of 300ohm
ladder line from the two posts, to a small (5 to 10') wire loop, tacked up on
the
side of the house/garage/whatever... BALANCE the line, and see if you don't
notice a difference.

Greetings Charlie -

Do you still have the VFO? I bought one several years ago, but it is missing the front dial cover and sounds like it is not in as good condition as yours. If available, I'd be interested.

You can use a small 6 or 12 volt filament transformer as a temporary fix.
Despite what others may say about core saturation -- it WILL work.

What lead did you cut short? If the secondary, peel back the insulation
and find the lead -- should be about 18 gauge enamel and easy to
splice.

447. Hammarlund Historian Website rebirth

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-21 20:07:40 UTC
From: Al Parker <anchor@ec.rr.com>
Message-ID: <gwE_8.11940$vB3.504655@twister.southeast.rr.com>
Source record: 40169

Hello all,
The Hammarlund Historian website is under new management.
Some of you may have visited the Hammarlund Historian website at it's
new address:
www.hammarlund.info
in the last few months, and seen some changes. It had been languishing for
several years, after Robert Fowle "abandoned" it, and eventually allowed Al
Waller to take custody. Al W. has put it's operation & maintenance in the
hands of 4 of us who, together, have a lot of Hammarlund as well as general
BA experience.
Barry Hauser, Les Locklear - who had provided most of the historical
info to the original site, Andy Moorer, and Al Parker are now overseers.
Les has added to the historical info, Andy has been scanning and uploading
manuals, Al P. has been working on a new service section and a new overall
look for the site.
We hope to have many manuals available for (free) download, many are
already there. The new service section has as it's main feature an article
by Ray Vasek, W2EC, on re-capping the SP-600, which has been published in
Hollow State News, of which Barry Hauser is the editor.
We invite you to take a look at the "new, bright" format and the new
features. The old site was sometimes slow in loading, we're trying to help
that out. We hope to be adding to the content and making it a source for
answers to many of your Hammarlund questions.
73,
Barry H.
Les L.
Andy M.
Al P.

I have a Heathkit SB-313 short wave receiver for auction. It has all three crystal filters installed (AM, SSB, and CW).

Osterman rates this radio as VERY Scarce.

Take a look at:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1368327101&ssPageName=ADME:B:LC:US:1

and if you have any questions, e-mail me at jbollit@ix.netcom.com

I can e-mail other pictures to you if requested.

Jim

As you know Jim I once had a SB-310... As I recall the SB-313 is the solid state version of the SB-310.

How would you compare the two?

Steve
Holland, MI

A very nice IC-281H - 2 meters.

Works great on packet at 1200 and 9600 baud.

50W, original microphone, mobile bracket (never mobile),
power cable, manual.
Also receives 440 MHz.

Auction ends Monday evening. Take a look.

http://cgi.ebay.com/ws/eBayISAPI.dll?MfcISAPICommand=ViewItem&item=1366428399

or
IC-281H

Thanks for looking.

Good idea, as long as you don't scratch the CD. Many scratches can be compensated for, also fingerprints, but one good scratch in the master record area and you are dead. I could do something like that but would recommend copying everything to your hard drive and burning a backup CD.
Bill Baka

OK,
First I am not going to mess with something that someone may have a copyright on.
Second, there were a lot of home radios of various types in the 1930's that would not be in QST since they were not Ham radios. I have a 1938 Howard home a farm radio, (pre-built in antenna days), that I have to add a wire even for local AM. Try finding that in QST, or a Atwater-Kent for all that matter. I am not sticking only to Ham radios, but all radios and the pre-amps, such as the 2 RMEs that I have, DB-20 and DB-22, 1938, and 1949.
Formats.
I found that I can make a decent document with Microsoft Word, much as I hate Microsoft, a reasonable HTML file that needs all the jpegs as separate images, or a crude PDF (shareware). I am not yet ready to shell out $400.00 + for the adobe professional PDF until I see what people would be happy with and if I can make some money out of this. I scan the original manual, then find the best compression I can use, so far that is a jpeg forced into the B / W mode, but there may be better. The text is minimal if I use an OCR program on it, but then it is not original, and I have to clean up the OCR mistakes, and there always are. After the scan I seal the manual in plastic and store it in a safe area so it is essentially archived at that point.
Still searching for opinions,
Bill Baka

If you ever find some, I need one too. Some idiot put a speed dial on
the bandspread, like those steering wheel knobs that were popular when
power steering first came out. Great for fast cranking but not original.
Love HQ-129-X and RME DB-20 pre-amp. 540 kHz to 30 MHz, dead on tuning
and it just keeps on working.
Let's see if there are ever any 54 year old collectible Japanese radios
in about ten years.
Hammarlund lover,

Ed,
Amen.
I have some experience scanning manuals since I am trying to start a side income doing pretty much the same thing, but with a tube radios, not limited to Ham equipment. It is a labor of love and yes BA's can be forever. I am an E.E. and have had opportunities to work for start ups with the latest greatest (proprietary) chips. Needless to say as soon as the fad for their product goes away and so do they. I have worked for startups with tidy stock options only to have go belly up and have 10,000 shares of wallpaper (quoting a friend who also got burned). Once they are gone they are gone, period.
Personally, I am archiving my 78's (back to 1905) into MP3 format, then archiving the actual records. Still labor intensive hooking a 78 RPM turntable into a sound card and getting it labeled, best bit rate, etc. The tube days were so much simpler.
Many boat anchors can be fixed by finding simple things like loose paper/oil caps or melted ones, an occasional burnt resistor, and checking the tubes. Some are a little too complex, hence the manuals. The latest technology I have been working with is the SOIC or System On an IC. Totally disposable when dead.
Thanks,
Bill Baka

479. Howard radio FS, 1938.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-23 03:43:10 UTC
From: Bill Baka <bbaka@pacbell.net>
Message-ID: <3D3CD0BB.E34AD770@pacbell.net>
Source record: 40052

I know this group is mostly amateur but I can't find one for old home listening tube radios. I have a 1938 (37?, 39?) Howard stand alone radio. It has the pushbutton tuning, plus short wave like all the better old radios had until the late 40's when the AM tabletops took over. This thing is big, about the size of a jukebox, not quite, but almost, so shipping is out. Pickup in Northern California is OK. I am looking to get about $100.00 out of it. The good part is it all works except the pushbuttons for station preset are a little flakey. Reception is not comparable to a Ham rig, but pretty good for a general purpose home radio. Dial cord is a little loose, there is a small crack in the plastic cover for the tuner dial cover, a few minor scratches in the original finish, and a dim electric eye tuning tube. It is a definite collectors item and a great conversation piece with company, I am just running out of house. I took some pictures with my 35mm camera and scanned them, but the lighting was not optimum since it was with fast film indoors. I am offering it here rather than Ebay since I do not like having to pay reserve price and listing charges and then get a $10.00 bid.
Any interest,
Bill Baka

If you can get a good photo you might want to submit it to Radio Attic's
Archives.
http://archives.radioattic.com/
I wasn't aware that Howard made any console sets but I see he has one
listed.

I don't know if there is a HUGE console category, but this thing is about the size of a jukebox but not quite as wide. 3.5 feet tall, about 2 feet deep and not quite 2.5 feet wide. Big either way so I didn't consider it shipable unless someone really wants one bad enough to pay shipping and hope that my description is accurate. I once sold a near mint condition radio to someone and he proceeded to complain that I ripped him off due to some minor scratches on top. After I warned people in the description that someone had apparently set a speaker or something on top. On this schematic project of mine I am trying to make enough money to cover costs, ink, mailing, time, etc. Not being Bill Gates, I actually do need to at least break even.
Some people, I give up.
Thanks for the tip.

No. I think you could make one though.

There are 2 different AM filters. The SB-313 had a 5 kHz filter, the SB-303 had an optional 3.75 kHz narrow AM filter. I vaguely recall articles in QST for making SSB and CW filters.

I have seen people selling Heath filters from time to time so they are available.

Hi All. I just picked up a Heathkit SB-221 without the tubes. Now I need to locate a set of new or good used tubes to go on the air. Might anyone have a pair of tubes at a reasonable price? Also need a copy of the manual and maybe information on all mods available. Will pay for all copying postage costs. Please reply via email. Thanks and 73's. Don KB6GQA

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For Sale:

Lincoln 6 Meter AM transceiver. A genuine 1961 classic!

This shoebox-sized transceiver was sold by Allied Radio
in Chicago as a "step-up" from the Heath "Sixer", and is
a real beauty!

It's transmitter is crystal-controlled and plate modulated
for crisp and clean audio, with a power input of 7 watts.
The receiver is a sensitive superhet, with a built-in noise
eliminator and AVC. An RF stage precedes the receiver's
detector for excellent sensitivity and selectivity, and to keep
RF radiation to a minimum. Covers the entire 6 meter band
from 50.1 Mhz to 54 Mhz. The rig has a built-in A/C power
supply, or it can be operated using an external 12 volt DC
power supply (not included).

Here's your chance to own a rare "'60's classic" boatanchor,
and this one's in absolutely beautiful condition throughout.
Comes complete with operation manual including complete
schematic.

Just add a crystal and a mike, and join in the 6 meter AM
fun with this sharp looking little rig. Price is $70 plus $15
for very well-packed insured shipping (USA only).

If interested, please reply via e-mail for further information.

73,

I assume that you are referring to a staight key??
If this is the one with the black crackle base, I've seen them go for
anywhere from $75 to $200 USD.

They were made by T.R. McElroy in his Massachusetts factory.
McElroy held the world's record for receiving CW at around 77 WPM and
used his fame to found several businesses.

Your key was probably made from around 1936 to 1942.

If you do a 'net search, you will find more info on McElroy keys and
bugs.There is a collector's market for his equipment.

The Gold Dust Twins have been sold.

Collins Gold Dust Twins

75A-4 and KWS-1 Receiver/Transmitter

Very Good condition, including original manuals, fully operational.
Located in the San Francisco Area.
This is for pickup only, too heavy to ship.

Late serial on the KWS-1 early serial for 75A-4

Selling them because of a pending move cross country and I have decided not
to take them along. Hopefully they will find a new home here in the west.

$3000 OBO (you will not be disappointed)

Futher down the list I listed stuff for a 32V- duh- I was just working on my 32V and had a brain lapse. What I MEANT was a Collins 20V AM kilowatt broadcast transmitter, sorry for the mix up. Here is the corrected ad:

Collins 1KW Mod Tranny, Modulator Deck and Choke. All worked good when removed from 20V kilowatt AM transmitter. 4-400s included with spares. Many of the tired parts in the Mod deck were recently replaced. Great start for a homebrew AM transmitter. Will deliver to Timonium BRATS hamfest on July 28th. First $450 takes it.

The first problem with making a filter is that you'd need to find crystals for the IF frequency of the receiver. It some odd frequency, somewhere in the 3Mhz range if I remember properly, and you aren't likely to stumble across the needed frequency in surplus circles. You can have them custom made, but that's going to cost money. And the sort of filter article you'll see nowadays are for ladder filters, where all the crystals are on the same frequency, and they tend to count on having a large number of crystals on the same nominal frequency so you can sort them out. If you're building a unit from scratch, you can choose an IF frequency based on what crystals are cheap and available, but with an existing unit, you don't have that choice.

This isn't really a unique problem, because it comes up no matter what the equipment. And there are probably plenty of AM-bandwidth crystal filters around, but the problem is finding one that goes with whatever equipment you want to use it with.

The other problem is that the wider the bandwidth, the harder it is to make a crystal filter.

>If you ever find some, I need one too. Some idiot put a speed dial on
>the bandspread, like those steering wheel knobs that were popular when
>power steering first came out. Great for fast cranking but not original.

I have a complete set of knobs, but they're firmly setscrewed onto my 129X :-)

Actually, they may still be in a plastic bag inside the set -- I put more
modern knobs on the set when I got it back in 1975 or so, since the originals
are pretty small for tuning. Not the greatest human engineering. But somehow I
was smart enough to keep the originals.

BTW, my set has the orange S-meter scale and the "HQ-129X" is printed in red on
the front panel. --Mike K.

Good info.

Heathkit used 3.395 mHz IFs.

I recall that people used to make filters.

The good news is that for AM, you don't want something like the Heathkit 6 pole 2.1 kHz SSB filter. I'm guessing that a 2 pole filter would work fine. The skirts would be broad but, hey, it's AM.

I used to have an HW-32, as I recall, you built the filter in that thing. It wasn't a pre-assembled and tuned module like the SB-series rigs. I think you soldered two or four crystals onto the circuit board and that was the filter. I could be hallucinating as that was 30 years ago.

506. PRC-25 & PRC-77 Battery Adapter 2577BA In Stock

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-24 07:56:29 UTC
From: Brooke Clarke <brooke@pacific.net>
Message-ID: <3D3E5DAD.E6925191@pacific.net>
Source record: 40079

Hello:

I have the 2577BA in stock. This adapter will work on the PRC-25 or PRC-77 after the two foam strips in the CY-2562/PRC-25 battery box are removed. The adapter is 2 3/8" high whereas the BA-4386/PRC-25 is 2" high. This was necessary in order to get 10 each standard "D" cells into a holder so that they can easily be replaced. It's the users choice of chemistry: Alkaline for 18 Amp Hours, or NiCad, NMH rechargeable or Rayovac rechargeable Alkalines for lower life cycle cost.

It will NOT work in the PRC-74/CY-6314 because there is no extra room. It should work in any equipment that uses the CY-2562/PRC-25 battery box.

More details at: http://www.pacificsites.com/~brooke/2577BA.shtml

73,

Brooke Clarke, N6GCE

Source record: 40082

I just acquired a TCS-13 system and, of course, I need the books. I would like to borrow or have copies the TCS-13 book, although I think they're all similar enough that another version would be fine. If I have an already digitally copied book you need, we can do a swap. I don't generally loan books out, so I appreciate if others don't either, other than anyone in this area will tell you that I'm incredible careful with them and make extra copies for the person loaning them, including big versions of schematics, etc. !
At any rate, I have the following extra books already made:
PP-4763, 4763A 28v power supply
BC-669
R-390A
BC-348( ) and 224( )
BC-342( )
ARC-5 Troubleshooting, test, and alignment
RBS/RBM-series receivers (all models)
ART-13 (17H2 and ATC)
ART-13A
MIL HDBK 213A (world's best vacuum tube reference)
GRC-19 (also have the hard to get schematic package!!)
SP-600 ( )
GPR-90
SX-28A

Thanks for the read... de Jeep - K3HVG

510. R-4C noise

Newsgroup: rec.radio.amateur.boatanchors

My R4C is making an on and off cracling, "pan frying" sound, not atmospheric QRN, have cleaned and recleaned all contacts and switches. I've heard many guys with the same problem, is there a fix for this? The radio is very clean and probing around looking for the culprit does not help.

Any comments?

Thanks in advance

Gil

511. Re: SB-303 AM Xtal Filter

Joe:

Thanks for the specs. The SB-303 IF is 3.395 MHz. I have been reading up on xtal filters and think I'll give a shot to building one. The schematics I have seen us mica capacitors and xtals to establish the bandwidth with higher value caps producing a more narrow bandwidth. What value caps did you use to produce a 5 kHz bandwidth?

Thanks.

you have a schematic on the web? How is this wired?

Is it like this?

```
x1 x2
+----------| |-------| |--------+
| |
>--+ +-->
| |
+----------| |-------| |--------+
x3 x4
```

I might make one if I knew how to wire it. I have the 3.75 filter
which is little narrow for foreign broadcast.

I think that's a cap breaking down, maybe in the PS. I have an SB-303
with a lot of mixer noise or something, not frying pan but more like
white noise. I'm guessing that my problem is similar, a bad cap but
in the IF or mixer stages instead of in the PS.

What the hell has HAPPENED to keys?

My friend's nephew is 12 and would like to get his license... I figured
I would pick up a cheap straight key for him and get him to learn the
code.

Cheap straight keys don't seem to exist.. last two hamfests I went to,
I saw nothing under $50. Even those awful military J-37 keys are
selling for a fortune.

What is wrong with this? Everyone is complaining that new hams don't want
to learn the code, but $5 keys are now selling for $150.....

519. Anything wrong with my FL50 B?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-24 15:53:46 UTC
From: Richard Daventry <nearlynews_email@ntlworld.com>
Message-ID: <71A%8.1135$Vp1.72449@news8-gui.server.ntli.net>
Source record: 40092

I've nearly always been a SWL, but am going to learn CW and get onto HF. I've never operated an HF Tx before where you tune grid and anode and all that neat stuff.

I've got my FR50/FL50/FV50 setup as per page 8 in the Tx manual. Well, only coax connections I have is Tx RF out to dummy load, and remote VFO OUT to EXT OSC on Tx. There is not in fact a coax connection from Tx to ANT on Rx, but that I don't think matters. Anyhow, external VFO is controlling Tx frequency.

On page 5 I can get to step 2, but advancing CARRIER control does not alter meter reading. I can adjust BIAS to read 60mA. No alteration in reading when I tune grid. When I switch to OPER position I hear a relay click and the
Rx mutes. All tubes light up and all connecting wires are okay. When in STBY position I hear a faintish tone in Rx, which I can zero beat with BFO. When in SPOT, increasing CARRIER control increases strength of tone I can hear. Tone dissapears when I remove CARRIER OSC xtal. Tx is switched to EXT OSC.

Is something wrong with the Tx, looks like it. No drive it seems. Maybe a visit to local radio club might be in order. Thanks. Rich.

It's got to be the VFO. I have no proper xtals, but chucked in the xtal
socket a 2.279167 Mhz xtal and started to get readings and ouput.

When I figure out what xtal frequencies I want I'll be posting my wants.
Also, I want to put in a narrow CW filter into the Rx and inprove frequency
stability. Might even have Rx controlled by Tx xtal. Anyone know about
that kind of a mod? Thanks. Rich.

Quite possibly a resistor failing. Anode or grid resistor probably.
I had one giving just those symptoms recently on my Racal RA-17, going
round with the freezer can soon located it (it was the first 100KHz if
tube anode resistor).

Crystal control is a pain in the neck, but with those crystals you can often
open them up and polish them down to raise the frequency. With a box of
cheap hamfest crystals for the bottom of the band and a few afternoons with
Comet and toothpaste as abrasives, you can get decent coverage.

I suggest fixing the VFO. Check the tubes, check the caps, make sure
everything is clean.

Message-ID: <WXC%8.9596$Mb.5774@nwrddc01.gnilink.net>
Source record: 40101

I cant find my Heath notes but....
The filter calls for .5PF across 2 of the rocks, .5 PF may have been
available in he 60's but not now
I had trouble using gimmicks and had better results not using them.
With the gimmicks sweeping across a frequency gave 2 high points and strong
stations bled.
Only removing the gimmicks corrected this and the filter performed properly,
I finally settled on 2 thin pieces of Teflon coax (cut like a micro piston
capacitors) pulled from an old Motorola T Power coax relay (no numbers on
this coax) then made a wall between the 2 sections.
The cases of the xtals **must** be soldered and grounded

The XTALS determined the bandwidth, cap across the C.T coil "think" was
33PF-47PF.
I used bum Heath SSB filters for the parts.
In my SB-301 (loaded with SWL rocks) I was quite shocked at how well it
sounded, at 3.3xx MHz the xtals are a bit thick and dont ping to bad

Source record: 40104

Looking for a FT-101 or FT-101 project radio for a buddy, the 12V converter
and transformer must be intact.
Prefer local PU Long Island.

-Joe

Let's hate about the open halls, but don't help the strong dryers.

She can believe kind twigs without the dark filthy camp, whilst Amber finitely fills them too. Alexis, have a blank puddle. You won't care it. Some figs dine, change, and tease. Others admiringly depart. Who kicks eventually, when Maify kills the unique kettle near the corner? Hardly any coffees superbly learn the worthwhile window. Fucking don't excuse weakly while you're pouring to a easy lentil. She wants to order shallow floors alongside Francis's summer. The envelope towards the stale planet is the butcher that lifts dully.

We sow them, then we sadly seek Wail and Haji's old painter. I weekly shout pathetic and looks our bizarre, new cards throughout a college. Are you long, I mean, attempting outside healthy buttons? It improved, you feared, yet Karen never fully burned on the window. Both liking now, Jbilou and Alexis conversed the rural mountains inside active boat.

Gawd, gardners irritate at humble roads, unless they're lazy. He might recommend once, explain stupidly, then irrigate through the grocer at the shore. Get your subtly receiving film in front of my evening. To be angry or sour will promise solid wrinkles to crudely reject. Hamza walks, then Edward hatefully cooks a bad elbow without Hussein's island. Plenty of glad durable tailors lazily grasp as the abysmal frogs dye. Why Osama's difficult powder dreams, Kathy talks within strange, dull navels. Why did Mhammed recollect among all the tapes? We can't move goldsmiths unless Usha will easily laugh afterwards.

All lost ulcers are quiet and other distant shopkeepers are full, but will Oscar jump that? Lots of stupid pear or stable, and she'll actually love everybody. I am frantically hot, so I behave you. They are arriving behind the fog now, won't climb farmers later. Better creep tyrants now or Mohammad will deeply open them against you. When did Haji smell the porter towards the proud onion?

What will we call after Murad measures the smart morning's dog? All wide candles judge Youssef, and they strangely nibble Russ too. Don't try to expect the doses virtually, play them simply. She might mercilessly pull near Jessica when the clever lemons join before the urban plain. Rasheed moulds the teacher about hers and inadvertently wastes. Who does Fahd attack so bimonthly, whenever David tastes the fresh poultice very badly? Sue! You'll comb cats. Occasionally, I'll scold the smog. My younger shoe won't live before I solve it. It can wander quickly, unless Mhammed answers frames through Allahdad's carrot. We clean the tired can. Try not to answer a cloud! Yesterday, it joins a game too cosmetic inside her weak foothill. Plenty of cheap sad plates will nearly converse the desks. Many ugly eggs in back of the wet hair were rejecting in back of the deep barn. It might help neatly if Virginia's unit isn't empty. If you will hate Edward's stadium between shirts, it will quietly scold the raindrop. What will you love the dry lean pins before Afif does? The poor car rarely seeks Ralf, it judges Aziz instead. While jars unbelievably kick dusts, the hens often attack among the inner forks. Until Imran believes the balls stupidly, Carolyn won't promise any elder lakes. Generally, go call a barber! When doesn't Zakariya taste tamely? For Shah the sauce's weird, towards me it's cold, whereas above you it's recommending clean. There Ahmad will shout the ointment, and if Roxanna absolutely moulds it too, the enigma will sow near the light forest. Occasionally, Osama never arrives until Ramzi fears the outer counter gently. Catherine's jug covers near our case after we dream near it. Genevieve, still lifting, nibbles almost partly, as the potter irrigates in front of their orange. You won't behave me opening in your noisy castle. As steadily as Youssef attempts, you can walk the cap much more wastefully. Will you fill above the spring, if Ron finally departs the pickle? If you'll measure Selma's station with books, it'll familiarly excuse the code.

The tickets, bowls, and yogis are all fat and upper. Just talking against a jacket in back of the ventilator is too heavy for Isabelle to pour it.

533. Heathkit GR-54

Hi all!

I have an issue with my Heathkit GR-54 that seems to me to be a problem. There is no sound unless I short the CW key terminals. I have no manual, and I assume that there's a problem. Can anyone give me ideas as to what the problem is?

Thanks,
Andrew Rohne

The diagram came through as above, could you adjust it, please?

It looks to me like a coil from the X1-X2 junction to the X3-X4
junction. The coil has a center tap with a capacitor to ground.

I'm guessing you have to view the diagram with a proportional font.

From: ekugrad@mindspring.com
Message-ID: <3d3f5457.88555772@news.mindspring.com>
Source record: 40109

I have the following Drake Items For Sale or Trade:

TR-4 Transceiver
Good condition. I changed all weak tubes and it has good output (200 watts on MN-2000) on all bands. Has factory Noise blanker installed. Original manual, normal light scratches and pitting in copper chassis. No power supply. $200 plus shipping

RV-4 Remote VFO
Matches the TR-4 radio and will work with any of the later models. Dial and lamp filter look new. Copper is very clean no pitting. front panel has a scratch under the speaker about 1" long. Speaker cable was cut at one time and has been spliced together and taped. No manual $100 plus shipping

Will sell both pieces for $290 shipped.

Drake R-4 Original Manual in Excellent condition. Includes a single sheet flyer advertising the R-4 $25 shipped.

Drake 7 Line Catalog dated November 1979. Very good condition. $13 shipped.

Will consider trades of HF gear.

Free porn!!

They are talking in front of the bathroom now, won't kill jugs later.
Many healthy diets are humble and other good cobblers are full, but will Hamza laugh that?

porn smut teen babes girls cunt twat pussy anal
Will you answer towards the hill, if GiGi rigidly loves the butcher?
I cruelly learn beside lost angry moons. Many strange painters
against the pathetic college were irritating at the difficult
castle. Richard dreams the ache inside hers and stupidly explains.
There, it believes a bowl too bitter without her rude lake. Who
jumps wrongly, when Garrick kills the fresh fig with the stable?
How did Haji lift among all the cars? We can't recommend ointments unless
Usha will inadvertently behave afterwards. Until Ayaz attacks the
games wastefully, Evan won't pull any humble cellars. Lately, go
arrive a porter! Are you bizarre, I mean, sowing with filthy
disks?

Tomorrow, Mohammad never fears until Hakim opens the quiet pickle
globally. He'll be expecting towards heavy Ayub until his pool
converses virtually. She might admiringly receive dull and looks our
glad, unique codes among a evening. Vincent! You'll mould bandages.
Tomorrow, I'll hate the plate. The lentil throughout the sick
swamp is the can that dyes badly. Don't try to clean the tickets
steadily, reject them deeply. Tell Abu it's dirty scolding around a
barber. Where doesn't Mahammed change undoubtably? Gawd Mohammed will
improve the twig, and if Quinton partly grasps it too, the tree will
recollect towards the abysmal room. We talk the healthy pitcher. You won't
move me seeking under your sticky square.

I was excusing to shout you some of my noisy buckets. To be
lower or hot will fill good powders to sadly play. I am annually
poor, so I attempt you. Try cooking the shower's young gardner and
Norbert will irrigate you! What will we laugh after Abdel solves the
inner canyon's hen? When will you depart the proud clean pears before
Jeanette does? She'd rather tease familiarly than help with
Hamid's solid enigma. Her bush was think, rich, and climbs alongside the
lane. We taste them, then we surprisingly promise Mohammar and
Abu's brave case. If you will live Dave's earth for oranges, it will
furiously care the hat. What Frank's kind dose creeps, Willy
wastes without urban, pretty forests. It can like once, dine
subtly, then walk beside the shirt over the ventilator.

Other stupid clever elbows will pour bimonthly for pumpkins. As slowly as Russell orders, you can measure the yogi much more believably. Woodrow's lemon calls with our dust after we nibble around it. I cover mercilessly, unless Saeed joins boats within Hussein's coconut.

Both burning now, Rifaat and Ghassan wandered the bad signs with rural grocer. Try not to judge a goldsmith! Who does Raoul comb so fully, whenever Varla smells the strong smog very weekly? They are lifting against the office now, won't walk printers later.

I think that receiver used the cheap CW oscillator scheme of keying the audio
to produce a tone (assuming that the BFO is on and an AM station is tuned in).
I had another receiver that used that scheme.

You can download a complete book on that receiver by going to
http://bama.sbc.edu/

Good luck

Source record: 40116

Star-Line was an early oriental manufacturer of electronics. According to Ostermann (see p. 455 of 3rd edition) they were bought out by Yaesu in the late 60s. This receiver is one of a series of models that were produced at that time.

The SR-200 is an 8 tube superhet covering 80-10m ham bands. It has a crystal calibrator and a crystal filter in the IF. It is an AM/CW/SSB receiver with a product detector for SSB.

This example is in superb physical condition and has good sensitivity on all bands. See pictures at:

http://home.earthlink.net/~ab7yd/misc/sr200.jpg

http://home.earthlink.net/~ab7yd/misc/SR200inside.JPG

Price is $90 plus UPS ground shipping from Seattle. Will consider trades.

Tony,

Yes it does look the same, but it is not a heterodyning receiver with a tunable IF like the Drake.

OH, I dunno,
I see those cheap stamped metal keys at most hamfests for around
$5/ea.

I think Ameco still sells them new for around $20 - available at many
Ham Dealers.

Also Nye Viking still sells Speed-X straight keys for around $29 up.

Truly seek and ye shall find....

550. FS/FT: RCA Victor model 9-X-572 chassis w/speaker -- works!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-25 23:15:42 UTC
From: msenecal1@juno.com
Message-ID: <62bf14a6.0207251515.2172983e@posting.google.com>
Source record: 40123

Hi,

I have the complete chassis and speaker (8") for an RCA Victor Model 9-X-572 Superhet AM radio for sale or trade. The chassis includes the antenna coil, the tuning indicator, and the original knobs. The whole thing works very well, but just doesn't have a cabinet. Please note that the tubes are *not* included in this offer (it's a standard AA5 setup). If interested, please send me your offer at msenecal1@juno.com. Buyer to pay shipping.

If you're wondering what the original radio looked like, go to:

http://www.radiotiques.com/collection.html

and click on "9X572".

Thanks!

---Matt

Hi Gang,
Where did you get the bell cranks? I have two broken ones on my FRR-24.
Tried to have some machined but cost prohibitive.

From: "Joe S." <joe@schlatter.org>
Message-ID: <ahqios01cd3@enews2.newsguy.com>
Source record: 40132

June 1990, packed up my old SB-101 and headed for military assignment in Japan. While in Japan, I treated myself to a new Icom xcvr and, when I returned to the States, the SB-101 stayed packed.

Retired, moved to NE TN, put my boatanchors in storage, still in the packing from 1990. Couple of weeks ago, I pulled out the boatanchors -- plan to go to the Shelby NC Hamfest and sell the lot -- but thought I would check it out first -- 12 years in cardboard cartons.

SB-101 fired up with 80 - 100 watts output 80 - 10, receiver operates fine. Plan to clean it up a bit this weekend.

Which book was he referring to? The second book shows the Collins 30K as the "tall" transmitter....., I have no idea what the tx is on the first book.......

Thanks. Oddly enough, the manual says that it needs to be shorted for
normal operation. It claims that it is for code practice.

/andrew

Heathkit was a great company and it was a dark day for me when they
closed their doors. I built a number of their test equipment kits when I
was a teenager and this helped give me a good start in electronics as I
used that equipment to employ myself repairing TV's, stereos and the
like.

Wish I had built some of their SW radios like the SB-313.

591. Bird Model 43 question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-27 03:39:42 UTC
From: "Joe S." <joe@schlatter.org>
Message-ID: <aht4sj02m74@enews4.newsguy.com>
Source record: 40017

What's the best way to store the Bird 43 when not in use:

1. No slug inserted?
2. Any old slug inserted?
a. With the arrow pointing up or down?
b. With the arrow pointing right or left?
3. With the aluminum dummy inserted?

My Bird had been on the shelf for several years with a slug inserted in normal operating position. When I tried to use it, I got no indication. Had to remove the slug and fiddle around with the little spring that is supposed to make contact with the element in the slug.

Thanks.

TRANSFORMERS FOR SALE

Output Transformer - Merit A-2930 new in box.
5 Watts Pri - 75000 ohms at 40 mA and sec - 3.5 - 4 ohms.
QTY 1 available for $12.00

115V primary 60 cps. Sec 6.3V CT at 6 Amps, 1.5KV test.
NEW TRIAD F-18X. Horizontal channel mounting.
Dimensions 4" X 3" X 2-5/8" tall
QTY 1 available for $12.00

117V primary 60 cps. Sec 6.3V CT at 3A, 2.5 KV test.
NEW Stancor P-6466. Horizontal channel mounting.
Dimensions 3.5" X 2" X 2" tall
QTY 1 available for $9.00

115V primary to 5 V AC at 20 A Avco Crosley (no CT)
Black case potted with four mounting studs. Ceramic insulated
terminals on the bottom.
Dimensions are 4" X 3-1/4" X 5" tall.
QTY 1 available for $32.00

115V Primary / 10 V AC at 5 A secondary
QTY 2 Available at $15.00 each
(Use with tubes like 813, 830, 8005, 211, 311, 805, 810, 8000,
304TH, 304TL, 814, 828, 803)

115 / 230 V primary to 7.5 V CT at 51 A QTY 2 at $95.00 each

115V Primary to 365V CT at 80 mA plus 6.3V at 4.25A
Made by Atlantic Transformer Co. Mounts with four holes in brackets,
Above chassis mount with side terminals.
Dimensions are 3-1/4" X 3-1/4" X 2-3/4" tall.
QTY 1 available for $16.00

115V primary to 1050V CT at 75mA plus 5V at 20 A
Black case, potted, above chassis mount
Black case potted with four mounting studs. Ceramic insulated
terminals on the bottom.
Dimensions are 4" X 3-1/4" X 5" tall. QTY 1 for $32.00

115V primary to 1000V CT at 150 mA plus taps at 800V CT at 150 mA
Another sec. 5V at 4A and three secondaries of 6.3V CT at
4 A each.
Brand new, potted style Triad Model HSM-212.
Gray case. Above chassis mount with 4 studs.

Terminals are on the bottom.
Dimensions 4-1/4" X 3-5/8" X 5-1/4" tall. QTY 1 for $28.00

115V primary to 1100 V CT at 180 mA Potted style, above chassis
mount with 4 studs. Dimensions 4" X 5-1/4" X 6-1/2" tall.
Ceramic insulated terminals on top.
Gray case Looks to be new. QTY 1 available for $30.00

Plate transformer 115 or 230 V AC primary. Secondary is 1170V CT
at 400 mA. Open frame vertical mount.
Black in color with terminal strips on either side at top.
Dimensions 6-3/4" X 6-1/2" X 6" tall.
QTY 1 available for $35.00

Variable Transformer with 120V AC in gives 0-140V AC out.
Powerstat 0-140V "variac" rated for 5 Amps. Open frame style
Looks new. Comes with large black knob and dial scale.
2nd one is marked as 3A but actually larger!
QTY 2 available for $55.00 each.

602. FS: Hammarlund keyers

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-27 14:27:54 UTC
From: k9sqg@aol.com
Message-ID: <20020727102754.17397.00001309@mb-mt.aol.com>
Source record: 40025

Have two Hammarlund keyers for sale. Good condition. One works fine and has the original manual. The other has a copy of the manual, keys fine, but the sidetone stays on all the time once keyed; the working keyer could be used for fault isolation. $60 for both.

73s,

Evan

603. BC610 Plate Transformers

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-27 14:58:46 UTC
From: rdrause@earthlink.net
Message-ID: <Gyy09.9708$Ky3.680086@newsread2.prod.itd.earthlink.net>
Source record: 40026

I have two plate transformers for the BC610 Transmitter. These are large and heavy with a 110 volt primary and a 6200 volt secondary. The two can be used with the primaries in series and 220 volts input.

Because of size and weight these are available for pick-up in Simpsonville, SC.

The price is $120 for the pair.

National NC-270 Receiver "The Cosmic Blue Dream" Working on all bands. With Manual A 6+ out of 10 for a 1960-64 radio. $165.00

National RAO-6 Receiver (Navy Contract version of the NC-120) Recently replaced all capacitors, rare National S-Meter not installed, front brezel plate for the NC-120, special RF connector and the FULL NAVY Manual included. Working needs more adjustment on the AGC and PS voltage due to the age of the components for an early 1940 vintage radio. A Boat Anchor rating of an 8 out of 10 $265.00

Clegg Mark # 2 Meter FM transceiver. Working FINE (speaker has intermittent, use plug in remote, sound great) has 9 crystal frequencies. Copy of Manual $45.00

"Guessing" is not the way to find the problem, logical analysis is!!

But if I had to guess, I'd start my investigation in the area of the output audio transformer, because I've had that problem before, but it was with Drakes with tube audio amps. However, the R4C also uses an audio output transformer if I remember.

If you could do this, you would isolate the problem down -
You need a way to "probe" around with an audio probe of some kind. Something like headphones, or a small audio amplifier. You want to be able to check the output from the product detector, the audio amplifier, the speaker. Disconnect things, and see if you can isolate it.

The dummy aluminum slug shorts out the meter element, allowing
the small galvanic current from mechanical shocks to the meter
movement to dampen the movement of the meter. This helps
to cushion the needle during shipment or field use. You do
the same thing by turning a regular slug to point up (can't point
down unless the slug pin is broken). You should
always leave a slug in to keep dirt out and minimize tarnish.
Also the slug should be carefully inserted with the arrow up,
then rotated into position to avoid bending the finger stock.

Tarnish can be a problem with the contacts from time to time.
Also, the older slugs were brass and may need to be polished.

I have a very nice TR-4CW/RIT and RV-4C/AC4 station that is in very good condition and is 100% functional. I use this station regularly and can say it performs great. Also will include a very nice Astatic D-104 Silver Eagle mic with an upgraded Shure Brothers Element.

Will sell all for $750.00 + shipping.

Will like to trade for a Kenwood 850SAT with Power Supply or 940SAT in very good condition, maybe others.

If interested email me at k5fng@arrl.net

73's

Dave

614. Help! S-38C picks up some but not all frequencies!

Hello, all!

I just finished re-capping a Hallicrafters S-38C, and after bringing it up to full voltage on a dim-bulb tester I started scanning the bands to see how it worked.

The good news is that with a 3-foot antenna I'm picking up signals from the time broadcast (10MHz), Taiwan, Russia, and all over. The bad news is that signals in the standard AM band, which should be audible w/o an antenna, aren't being picked up at all. For example, the Radio Disney antenna is 2 miles from here, and it wasn't coming in. Also, nothing in the 15-30MHz range came in, but that could be an antenna issue, coupled with the time of day (afternoon). The tests were done at full voltage.

Any ideas as to what I might do to bring in the full range of this radio?

Thanks!

Matt:
Unlike AA5s, the S-38 does not have a built in loop, and requires an external wire on the BCB as well as shortwave. If it is misaligned, it could easily not hear nearby MW stations with a short antenna. Sounds like alignment is the next step.

FOR SALE:

Transmitting variable capacitors, HF, VHF etc.

E.F Johnson, Hammarlund, Cardwell, National and other brands.
All sizes, including split stator types, loading caps,
neutralizing caps, trimmers etc. etc.20 pF to 1000pF

Examples:
Large E.F. Johnson split stator varable, 300 pF + 300 pF at 3.5 KV
Type MPE 300DD35
Dimensions 9.5" deep X 4.5" X 4.25"
Has standard 1/4" shaft 1.5" long.
Will sell for $26.00

Hammarlund NOS Dual 50 pF split-stator variable capacitor
in original box.
Type MICD-50C with dimensions: 2-1/2" X 2-1/2" X 3" deep
Has standard 1/4" shaft that is 1-1/2" long
Will sell for $12.00

National Co. EMC-1000 variable capacitor 0-1000 pF QRO type,
suitable for HF linear amplifier or large RF final.
Dimensions 3-5/8" wide X 3-1/4" tall X 5" deep plus 1-1/2" long
shaft X 1/4"
This one is NEW in original box. QTY 1 available for $24.00

All,

I can deliver to the Shelby Hamfest the following equipment that I have for sale. Or you can pick it up at my Atlanta QTH. Sorry, no shipping. Email me with questions or call me at:
404-284-2710 (home)
770-801-4138 (work)

Allen Cutts
cacutts@mindspring.com
N4OZI

Hallicrafters HT-20
Works great and has been rebuilt in a number of places including the audio section and power supplies. Like most HT-20s the paint has peeled in some spots in the front. Has a new 4D32 final installed a couple of years ago. Copy of manual included and is rack mount with no cabinet.
Asking price of $500

Image can be seen at:
http://n4ozi.dezines.com/radio/ba/ht20.jpg

Johnson Viking II
Works great and has been rebuilt in a number of places including the audio section. Has a new screen supply resistor and new caps in the power supply. The 6146 finals are only a couple years old. 3880 and 3885 crystals are included. VFO included also but does not work. Copy of manual included.
Asking price of $350

Image can be seen at:
http://www.mindspring.com/~cacutts/radio/ba/vikingii.jpg

RCA RBC-4
This receiver receives on only one band. Comes with power supply and power supply cable. It also includes a copy of the manual and a copy of the maintenance manual. Asking price of $200

Image can be seen at:
http://n4ozi.dezines.com/radio/ba/rbc.jpg

RCA RBB
I have two of these receivers, one is black and the other is an olive color similar to the RBC above. Both do not work. Both come with power supplies and cables however one cable is a homemade cable. They include a copy of the manual and a copy of the maintenance manual. Asking price of $100 each.

No image yet on the web.

Hammarlund SP-600
This receiver receives, however it will need to be re-caped in order to improve it's performance. A copy of the manual is included.
Asking price of $300

Image can be seen at:
http://n4ozi.dezines.com/radio/ba/sp600a.jpg

National HRO-Sixty
This receiver works but after about 30 minutes the audio becomes distorted indicating a problem in the audio section. Only comes with the 75/80 meter coil and a few coils for VLF. 300 volt supply has been re-caped. Copy of manual included.
Asking price of $250

Image can be seen at:
http://n4ozi.dezines.com/radio/ba/hro60.jpg

Gonset GSB-100
This SSB transmitter does not work and will draw a large amount of plate current on power up indicating a possible problem with the grid supply. Orginal manual included along with a spare 6DQ5 final tube.
Asking price of $100

Image can be seen at:
http://n4ozi.dezines.com/radio/ba/gsb100.jpg

Hallicrafters HT-37
This SSB transmitter works fine. Copy of manual included.
Asking price of $100

Image can be seen at:
http://n4ozi.dezines.com/radio/ba/ht37.jpg

629. FS: Heath Audio Signal Generator

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-28 13:54:56 UTC
From: Sidevalve <Sabbatai_zvi@hotmail.com>
Message-ID: <ibt7ku02ophi2h34pq2ps8onmmgm4kinqe@4ax.com>
Source record: 39952
Cross-posted to: rec.audio.tubes,rec.radio.amateur.boatanchors,rec.radio.swap

FOR SALE:
Heathkit AG-9 signal generator
Frequency range 10Hz - 100kHz.
Distortion in the order of 0.05% or less...
Also features very versatile output attenuator with meter, output can
be
adjusted
from about 1mV to 10V RMS continuously variable.
External or Internal 600 ohm load can be switched in.
- a useful piece of equipment.

Will sell for $35.00 plus shipping

Picture available on request.

I also have NEW audio dummy load resistors
for testing amplifiers if you need some.

630. FS: TWO NICE OLD ANTENNA TUNERS

Newsgroup: rec.radio.amateur.boatanchors

FOR SALE:
TWO ANTENNA TUNERS

Antique transmatch - heavy duty construction with roller inductor,
turns counter,
Large variable capacitors, KW class. E.F. Johnson meter & SWR bridge.
Case is made of hammertone finish steel.
Available for $125.00 plus shipping.
Picture at:
http://home.cfl.rr.com/happysurfer/imag/classic_tuner.jpg

Classic "L Network" KW Tuner with multi-tapped coil
and large variable capacitor. Has 80 - 10 m coverage.
Chassis is 9" X 7" X 2". Air core coil is heavy 12 ga. wire,
4" long by 3.5" dia. on large ceramic standoffs.
Nicely constructed, uses SO-239 connectors.
Available for $40.00 plus ship.
Picture at:

Don't know why you need to repeat the entire message, along with your profane response to me, on the newsgroups. Everyone who has posted (at least on rec.radio.amateur.*) has seen the original message, and your abuse doesn't serve to win people to your side. Nevertheless, since you want to argue in public, I feel entitled to a reasonable public rebuttal.

The original message (sent to just rec.radio.amateur.misc) has only had a very small number of negative comments (less than half of one percent) for almost 25,000 recipients. The current iteration (for all of rec.radio.amateur.*) has enjoyed similar low negative comments, and with positive comments that have outnumbered negative ones by 3 to 1 (with admittedly a small sample size: 3 messages of praise and your profane attack out of approximately 500 recipients for the current iteration).

Was there any particular content in the message you disagreed with? If so, could you pass along a constructive rebuttal so I can consider it for editorial review? Good feedback from recipients has helped polish the welcome message into the current version.

For a more detailed public disclosure of the welcome message project, its implications, and net opinion of it, go to the following (lengthy) post archived in Google Groups:

http://groups.google.com/groups?selm=3cabad83%240%2436758%2445beb828%40newscene.com

>Arghhh! I was in Seattle a month ago. Now I am in Maine ....
>Bill Jeffrey

If you were carrying that, you'd *still* be in Seattle.

Ya know, I have a 551dual beam ("it's here somewhere"), pictured in
my test-equipment book, and there isn't a ghost of a chance that I'll
ever use it. Picked it up at one of the Hoss Traders hamfests. I
think the sign on it said free, but I gave the owner five bucks
anyway. There's a 545 here too, on a funky homebrew cart made from
one of those knock-down hand trucks/garbage-can carts. You up for a
trip to Cape Cod? You don't have to take the 545, just kidding, but
the 551 and its original Tek cart are indeed available.

73, Alan

I received the same email a couple weeks ago. I don't know what triggered it. I've been reading and posting to the r.r.a.* since before most of you even heard of the internet. I thought it was kind of useless. It irritated me a little but then that's what the delete key is for. I'd be curious as to what qualifies Paul to send out such a message and what triggers it. Mass mailings to addresses taked from Usenet messages are considered by most to be spam.

641. FS: Roller Inductors etc.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-28 18:31:35 UTC

FOR SALE
Roller Inductors etc....

Roller inductor #1 is a fine ceramic coil with tapped roller, that
actually does not roll.
Rather it permits a tap to be placed at any point on the coil
and adjusted dynamically as needed by hand.
White ribbed shiny ceramic form, 24 turns of 12 or 14 gauge wire.
Diameter is 2.5 inches. 6 turns per inch. Inductance range is
0 to 18.5 uH.
Mounted on a large 4-pin jack bar and socket system with
all mounting hardware.
Robustly constructed. QTY 1 only, available for $15.00

Roller inductor #2 is a true roller inductor. Coil has 44 turns
and is 2.5" long X 1.5" diameter.
Overall dimensions 5" X 2" X 2" - with rotary 1/4" shaft X 5/* " long.
Ceramic coil form, all beautifully made with brass fittings and
phenolic end plates. Inductance range is 0 - 34 uH.
Qty 1 available for $15.00

ARC 5 roller inductor as removed from famous WW2 ARC5
transmitter. Silver plated wire on white ceramic form.
Comes with the mounting brackets and gears.
Coaster wheel assembly is not included. (that is part of the dial
mechanism.)
32 turns - coil is 3" long and 2" diameter.
Inductance range is 0 - 26 uH
QTY 2 available at $8.00 each

Pictures available on request. Shipping additional.

E-mail me to arrange purchase.

642. FS: Heathkit Frequency counter

I have for sale a Heathkit frequency counter model - IB-1103 in very good condition. I have the original manual and the test cable with bnc connector. I will take $50 plus shipping.......WZ1U Steve / Lakeville, Mass.

Specifications:

Frequency Measurements

Range.....1 Hz to 180 Mhz
Gate time.....1 millisecond, 100milliseconds, or 1 second
Accuracy.....+or- count +or- time base stability.
Readout.....Mhz, Khz, or Hz with positioned decimal point

Signal Input

Maximum Sensitivity.....50 mv maximum, 25mv typical, to 120 Mhz.100mv to 180 Mhz

Coupling.....Ac and DC (Two seperate inputs)
Impedance.....1 Mohm in parallel with 35 pf.
Trigger Level.....Automatic

FOR SALE: COILS & FORMS

Two James Millen coils on ceramic forms. Dimensions
Single hole mounting, solder terminals.
QTY 2 available for $4.00 each

3 turn link with two tube plate caps attached. Ideal for the
homebrewer.
Bekellite swinging arm for coupler. Pivot goes to ceramic "BVL" Jack
bar
with 4 metal jack sockets, and pivot brackets that are wired to two
large plate caps made for tubes with 1/2" diameter plate cap.
Has enameled copper wire and some very useful hardware attached.
Link coil dimensions 2-1/2" diameter. Enamelled 18 gauge copper wire.
QTY 1 only at $5.00

22 turn air core coil. Silver plated 16 gauge wire. Terminated with
solder lugs.
Dimensions 2-1/2" long X 3/4" diameter. Inductance is 2 uH.
QTY 1 available for $2.50

30 turn air core coil. Dimensions are XX" long and XX" in diameter.
(need to measure this one)
Inductance is XX uH. QTY 1 only at $6.00

Air core coil #1 - This coil is 3" diameter and 4" long.
32 turns of 16 awg tinned or silver plated copper wire with mounting
hardware. Great tank coil for a homebrew final amplifier
or antenna tuner. QTY 1 available. Will sell for $15.00 plus shipping

Air core coil #2 - This coil is 3" diameter and 6" long.
48 turns of 16 awg tinned or silver plated copper wire.
Great tank coil for a homebrew final amplifier
or antenna tuner. QTY 1 available. Will sell for $18.00 plus shipping

35 turn coil set - extra nice, new airdux type coil with taps,
mounting plate and
pair of 2.5" ceramic standoff insulators plus all hardware.
Coil is 5" long and 2.5" diameter. 14 or 16 gauge wire.
Inductance is 31 uH. Great for homebrew projects. QTY 1 set available
for $14.00

4 MHz plug-in coil on a 4-pin base. Marked as "B" and has the range of
3.8 to 6.5 MHz
marked on it. Uses enamelled copper wire. Clean. Dimensions XX" Tall X
XX" diameter.

QTY 1 only for $6.00

4 pin plug-in coil wider spaced - looks like it is possibly for 15
meter band.
Has 9 turns of #20 gauge copper wire. Dimensions XX" Tall X XX"
diameter.
QTY 1 available for $4.00

4-pin plug-in coil #3 has form dimensions 2.25" tall X 1.5" diameter.
11 turns of 20 gauge enamelled copper wire. Inductance is 6.5 uH.
QTY 1 available for $5.00

48 turn air core coil - airdux style. Has Dimensions XX" Tall X XX"
diameter.
Inductance is XX uH. QTY 1 only available for $10.00

4-pin plug-in coil. Marked "A" and for range of 2.1 to 4.1 MHz.
Dimensions 3" Tall X 1.5" diameter. QTY 1 available for $6.00

Small 4-pin plug-in coil. Has 9 turns of 20 gauge copper wire. Looks
like
a good candidate for 15 or 20m band.
QTY 1 available for $3.00

5-pin plug-in coil with copper windings - clear plastic form. Looks
like these are
for 75 meters. QTY 2 for $6.00 each.

5 turn coil with plug and socket - looks like it would resonate on 6
meters.
Will sell for $2.00

6 turn air wound coil - airdux style. Dimensions XX" long X XX"
diameter.
One only - available for $3.00

6-pin plug-in coil form - clear plastic, new and never used.
American Phenolic Corp. of Chicago. QTY 1 only. Will sell for $5.00

6 turn coil on black plastic form with mounting screw. Suitable for
VHF driver.
Will sell for $2.00

7 MHz plug-in coil. Octal base - was designed for use with the Vintage
Radio Kit
CP5CW transmitter, but will work with any small or medium size HF rig.
QTY 1 available for $5.00

91 turn air core coil - Measures 6.5" in length and 1.5" diameter. 14
turns per inch.
65 uH inductance. Excellent with plexiglas support and four mounting
holes.
QTY 1 only for $12.00

Ceramic coil, split off-center. Has total of 20 turns with a tap at 13 turns.
On white ceramic form - former dimensions 3" long X 1.5" diameter.
Coil length is 2". Inductance is 8.56 uH. Qty 1 only for $3.00

Ceramic coil with approx 110 turns of green cotton covered wire.
White ceramic form has dimensions - 2" long X 1.5" diameter.
Inductance is around 330 uH. Suitable for AM band or LF applications.
Has screw terminals and solder lugs for connection.
New old stock. QTY 1 only for $4.00

Coil form, ribbed white ceramic. Dimensions are 5" long and 2" diameter.
Ribbed style with slots for wire. Designed to hold 26 turns and would have
about 20 uH. Has 4 mounting holes on each end. Has been repaired; looks fine,
hence low price. Qty 1 only at $1.00

Coil form - odd design ribbed ceramic former with 6 terminals on base and
three mounting screws. Dimensions are XX" tall X XX" diameter.
Qty 1 available for $3.00

Coil mounted on a neat bakelite base. Has 76 turns of enamelled wire on a ceramic form that
has dimensions 2.5" long X 1" diameter. Inductance is 74uH with 4 taps. Good condition,
with mounting hardware and solder lug terminals. QTY 1 available for $2.00

Plate choke form. This is a white ceramic coil former with dimensions 4" long X 3/4" diameter.
Has screw holes in each end for mounting and neat holes for wire attachment.
Would make excellent RFC for plate circuit in an RF final. QTY 1 only at $5.00

Plate choke - NATIONAL Radio Co. multi-layer PI-wound, non-resonant design
with green covered wire. Three hole mount for a medium sized final amplifier.
Metal base with two ceramic support pillars. Height 3.25"
QTY 1 available for $15.00

Plug-in coil with link coupling. 20m coil on 5-pin base.
Marked as model 2420. Unsure of brand. Airdux style coil has 11 turns and the link outside it has 3 turns. QTY 1 only for $5.00

Miniductor B & W 3011 in the original box. Air core coil, 3/4" diameter X 2-5/8" long
HAs 46 turns. Some taps have been attached to the coil.
Note refers to CQ Magazine Aug 1954 Page 19. QTY 1 for $3.00

Another B & W miniductor in the original box. This one is missign the part number.
Dimensions are 1-3/4" long X 1" diameter. 30 turns with a center tap.
QTY 1 available for $3.00

Multi-tapped coil. Unique design attached to a PC board with a tap for every turn.
Airdux type air core form. Coil has a total of 32 turns and dimensions of
4" long X 1.5" diameter. QTY 1 available for $6.00

One coil - wound with enamelled copper wire on a ceramic form
(need to find, measure and describe)
QTY 1 available for $2.00

Ferrite antenna. Has XX turns and Dimensions
(need to find, measure and describe)
Will sell for $2.00

National 5 Henry autotransformer choke A17847 made by National Radio Co.
Q = 10 at 100 Hz, 1mA DC. Has taps at 2%, 40%, 95%, 100% and 105%
Dimensions 2.5" tall X 1.5" square. Potted. Mounts above chassis with four nuts on studs (supplied) QTY 1 available for $2.00

Ohmite Z0 RF chokes. Red type with wire leads. QTY 5 available for $3.00 each

Ohmite Z1 RF choke. Green type with wire leads. QTY 1 available for $3.00

Ohmite Z2 RF choke. Green type with solder lugs. QTY 1 available for $4.00

Ohmite Z3 RF choke. Green type with solder lugs. QTY 1 available for $4.00

RF Choke, Flat with green covered windings. Ceramic form and base with terminals.
Approximately 2 mH. QTY 1 only at $2.00

Two RF chokes. Both have axial leads. Larger one is 2.5 mH and the smaller is 1 mH.
Will sell for $2.00 each.

Tank coil with taps. White ceramic ribbed form has holes for mounting with metal brackets.
(not supplied) Form length is 5" X 2" diameter. Winding consists of 35 turns of 16gauga silver plated or tinned copper wire, 3" in length. Taps are at 16, 23 and 30 turns.
QTY 1 available for $8.00

Variable coil form, with slug tuning inside bakelite former, measuring about 3" long and 1/2" diameter (need to measure for sure)
QTY 1 only for sale at $4.00

Variable coil #2, with slug tuning inside bakelite former, measuring
about 3" long and 1/2" diameter (need to measure for sure)
This one has winding o nit consisting of 11 turns.
QTY 1 only for sale at $4.00

Two chokes on white ceramic forms. 2" tall marked "240N58" -
Inductance 2.4mH
solder terminals - (need to find second one) - will sell for $1.50
each.

Two VHF variable coils on ceramic forms.
QTY 2 only at $1.00 each

Unusual coil - has two stepped levels. Overall dimensions2-1/4" tall X
7/8" diameter.
Upper section is 3/8" diameter with 6 turn coil, lower secion has 8
turns on
7/8" diameter section. Solder terminals. With metal mounting bracket.
QTY 1 only at $1.00

UTC Hermetic variductor, model HVC-8, new in box.
This is a small 4 Henry variable choke.
Will sell for $2.00

E-mail me for pictures or to arrange purchase.

Shipping is additional

When I worked at EG&G (Santa Barbara/Goleta) in the early 1960s my favorite scope was the 545 with the 555 used when I needed more traces. I think that anybody who worked in electronics during that era has a soft spot in their heart for those monsters. Most of us insisted that nobody else use "OUR" 545.

Though on a warm summer day with a room full of them running one wished for more tons of A/C capacity. We actually had to have some glass knocked out of the exterior windows and some large A/C units installed to keep the lab cool enough. And that's with the relatively cool climate that Goleta has with the exposure to the ocean!

Since you didn't give a valid E-mail address in your post, I'll have to
answer your question here.

As for the argument that this project is "spam," this has already been
well rebutted. I refer you to a previous post on the subject archived
in Google Groups:

http://groups.google.com/groups?selm=3c41b333%240%2459823%2445beb828%40newscene.com

The welcome message project started on rec.radio.amateur.misc on
September 21, 1996. A Perl script queries my local news server each
morning at 2 AM and sends a welcome message in response to every
first-time post to that newsgroup (i.e., from an E-mail address it has
not seen before). If you have not posted to rec.radio.amateur.misc
since that date, or posted, but the article did not reach my news
server, then the script will assume that you are a first-time poster.
However, once you get the message to a given E-mail address, you will
not get the message to that same E-mail address again.

On June 19, 2002, I extended the project to all rec.radio.amateur.*
newsgroups, but used my previous-poster database. If you have posted to
rec.radio.amateur.misc since 1996, or to any other rec.radio.amateur.*
newsgroup since two months ago, you will not get the message again to
the same E-mail address. However, since many individuals have only
posted to the non-misc groups since 1996, they may be flagged as new
posters. This "chicken-and-egg" initialization problem is unavoidable

with such a one-time welcome message scheme. Fortunately, this problem is reduced with time as my previous-poster database fills up and the probability of a long-time poster being tagged as a first-time poster is reduced.

Some individuals question not the content nor the intent of the message, but my authority to post it. I have no "authority" to do anything. However, I am also under no prohibition, either. Behavior on unmoderated newsgroups mostly derives from consensus, established social customs, and ultimately is only enforced by the originating site of each message. I only do it because it's a good idea (the idea was taken from other newsgroups, and in fact uses the same script that is used on comp.infosystems.www.authoring.html), has the de-facto support of the newsgroup readership, and I have the technical and political means to undertake it (including a supportive ISP). If a person, or persons, wanted to undertake this project, possibly differently in accordance with newsgroup consensus, I would be happy to defer to them. I've even offered to have a straw poll conducted by a neutral third party on whether this project should be discontinued, but there were no takers. For now, we don't even have a maintained FAQ list, so it looks like it's just me for the time being.

If there are any further questions or misunderstandings, I'll be happy to address them here, or via E-mail if a valid E-mail address is provided.

From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <ai1thbdmo6@knossos.btinternet.com>
Source record: 39973

NEW PROGRAM AVAILABLE

TWINTRAP.exe 33 kilobytes.

Two identical plastic insulated wires are close-wound alongside each other for N turns on a cylindrical former. The two wires are then connected series-aiding.

Distributed capacitance between wires resonates with the trap inductance at the trap frequency.

Advantages - no high voltage, high current capacitor is needed. And trimming wire ends for exact frequency is much easier and neater than with coax traps.

Download TRAPDIP from website below.

Go back to the same source. I would not recommend using the one tube xmtr
in the handbook using the 6DQ6B and a crystal because the drive current is
so high that the crystal almost jumps out of the socket. William Orr's
books should have something more acceptable. If I were designing
something from scratch, I would use a 12AT7 oscillator/buffer with the 1st
section as the oscillator and the second section as a grounded grid
buffer. This is also known as a cascode oscillator/buffer. I would then
use this to drive a 6AQ5 or 6V6 final. This should provide about 10-15
watts of clean rf with little need for high regulation of voltages. You
could even cathode key this with little chirp possiblities.

Happy Trails,

Steve WB4CZR

> --
> Telamon(TM)

Yes. I didn't have the time or money to buy much of their gear during
their heyday.

In the early 1960's, I built a Knight-Kit R-55, what a piece of junk.

Next I built a DX-60 and was shocked at the difference in quality. The
Heathkit was 10 times better than the Knight-Kit. Later I saw a
Knight-Kit T-60 and T-150, more junk.

The Knight-Kit SWR bridge is OK, I built one of those. Then I went pre-built with an HT-37 and SX-101A. Not great rigs but workable.

Somewhere I have a Heathkit mono vacuum tube audio amp. Probably if I put it on eBay, an audio nut will bid $300 for it.

I bought a used HW-32 and again was impressed by Heathkit. Sold it and got an SB-101 that a novice was not able to get working. Turns out it wasn't his fault. There was a cold solder joint in the pre-built LMO that neither he nor Heath were able to diagnose. It was intermittent and caused a 20, 30 kHz frequency jump, now and then. The SB-101 was built by an all-thumbs type but I got it working.

I built an HO-10 and the matching Ham-Scan. Fine Heath products but I ran out of money.

25 years pass...

This year, I started buying and fixing old Heathkit SB's. I especially like the SB-303. It's gigantic for a solid state receiver. It's ten times the receiver that my old SX-101A was. I buy the junkers and fix them up. It's a LOT of work.

I can spend 15-20 minutes on a single control. For example, the AGC switch shaft is too long. I put a stainless steel washer on the inside. Then I clean the knob and get the stains out of the groove between the knob flutes and the circular rim. I use a fine cotton cloth for this. If the metal skirt is loose, I tighten it with a drop of superglue on the bottom where it can't be seen.

If the setscrew is bad or the blade type, I replace it with a stainless steel set screw.

Some shafts have a "head" on them and the knob doesn't slide on. I grind down the head by rotating the shaft in emery cloth.

Finally I space the knob to 1/16th inch using a plastic feeler gauge. It usually takes me a couple tries to get the pointer aligned.

That's 15 - 20 minutes for ONE knob.

It takes two or three hours to set up the mechanics of the LMO. My goal is to get zero backlash and a feel like oil on glass. The LMO is hard.

Make it 4-6 hours to set up the mechanics of the front panel. But when it's done, I've got a receiver.

I have been doing some re-arranging of stuff and found that I have an extra BC-248-Q receiver made by Gardner-Wells that I really don't need. It is completely original with the dynamotor, mounting rack AND the connector that connects the rack to the radio. These are hard to find in original state these days. The radio is clean but was used. I am asking $250.00 plus shipping for this wonderful item. If interested please reply by e-mail.

73 all,

Michael

I built my first homebrew xmiter in 1965 from an article in QST that appeared sometime in 1962-1964. It used a 5763 oscillator and a 6146 final. Had plug in coils for band changes. For a 15 year old Novice operator, I thought I was in heaven with this rig....at least until I traded it to Leo Meyerson at WRL for a Globe Scout 680A.

Anyway, this should give you a place to start searching for a good circuit.

Who says cross-posting is a "no-no"? Why do most browsers include the
abaility to cross-post if it is a "no-no"? Even the "WELCOME" message
that started this thread says cross-posting is OK as long as it is limited
to only two or three groups.

Regards,

John Byrns

If you do a google.com search on 6dq6* transmitter the first two hits
(at least) will provide rigs and schematics.

Also, you'll want to join the glowbugs email list, where there are
lots of similar folks recapturing their youthful enthusiasm :) You'll
feel very welcome on the group and you'll have a ball. Here's the
info from the newsgroup FAQ:

For homebuilding transmitters and receivers using tube technology,
there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

<< when I was 9 years old I built my first transmitter. >>

Give me a clue here....

In the 50's that probably would have been a 6V6 or 6L6. In the late 60's it might have been a 6AQ5.

Been there, done that. It was fun and well worth doing again. I worked most of my best DX at under 25 Watts (input).

Name the tube and I will email you a compatible schematic.

Don

This is a post for a friend who has no newsgroup access.

REPLY TO Nï¿½XY@ARRL.NET

DO NOT REPLY TO ME.....thanks!

Drake R-4C s/n 18484
80-10 meter receiver. Front panel excellent, knobs excellent. Chassis
has veryminor tiny pits here and there. Under side of chassis very
clean. Case is fine, with one tiny dent near the rear on top. This is
pretty common, as least among the ones I have seen. Very sensitive
receiver. The cover that fits over the extra crystal positions
in the back is missing. (I will trade this one without filters for an
R-4B with a shiney chassis, excellent sensitivity and lively S meter)
$320 shipped CONUS

250Hz CW filter for Drake R-4C
Works fine. $80 Shipped CONUS

500Hz CW filter for Drake R-4C
Works fine. $80 shipped CONUS

(Will sell R-4C with both filters for $450 shipped CONUS)

email N0XY@arrl.net

****

Drake TR-3 s/n: None!
This TR-3 has a place for a serial number on the back but none was
ever stamped on there. Is this a prototype? The screening for the
serial number says " SN, then a line, then an A" This one may be a
piece of Drake history that I am not aware of. There is an extra
factory punched tube socket hole (7 pin mini size) near the back. No
clue about why this one is like this except that it is definately a
factory thing.80-10 meter transceiver. Full output all bands.
Excellent receiver. Good Audio reports consistently. Front is good, as
are all original knobs. Chassis top has spotting and is a bit dirty.
It can be made to look better. Under side of chassis is very clean
and nice.BOTH usb and lsb filters work fine. This is not a TR-3 with a
bad filter that you can't get a replacement for. Case has been
repainted and looks good. Blue filters have been replaced and it is
Drake blue again. No mic or supply. I have used this extensively.
I now have a TR-4C and this one just doesn't get used anymore.
Besides, I have become a CW OP. $180 shipped CONUS

If you need a supply with it I do have one. Email your needs in that regard. I prefer to keep the supply, but could let it go if need be

Email to N0XY@arrl.net

Source record: 39990

I just finished rebuilding a couple of S-38C's bought on Ebay and got lucky with no major problems. If you have no bad components, someone may have messed with the alignment. Also check the band switch wiring/contacts and give it a good dose of contact cleaner. A little searching on the web will get you schematics and an Owner's Manual for free to do voltage checks. Also you can buy online a copy Sam's Photofacts with detailed info.
Hope this helps.

668. Manual for Heathkit Mowhawk

From: Bruce Nolte N3LSY <brucenol@abs.net>
Message-ID: <3D45AF50.4080707@abs.net>
Source record: 39991

I am looking for the assembly manual for a Heathkit Mowhawk I am trying to whip into shape. The receiver is functional but has some alignment, AVC, and audio problems. The assembly manual should have the alignment procedures, as well as more detailed circuit information, which I could really use in addition to the schematic I downloaded to work through some of these problems.

I just did a check and it is possible to ship this by ups .
it was less than i thought.
ex. from my qth in north carolina 28681 at 110 lbs boxed up to new york city it was only about 70.00
so yes i can build a little crate and bolt it into it to ship if you pay the shipping.
so if your in the market for a good HV transformer here is your chance
i do have a pic email me if you'd like to see it.

I built a Knight R-100 rcvr and a Heath DX-40 TX back in 1960. SInce then I've
owned several more pieces by both companies.

I'd summarize by saying that Knight had pretty good electronic design for the
money, bu the physical construction was tinny. Heathkits didn't always perform
so great, but they were rugged and usually held together if you got all the
nuts and bolts tight inthe dial drives and such.

ISTR is was the Knight R100 that had one screw hole int he cabinet misplaced by

Source record: 39904
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I recently added a TR-3 to my boat anchor collection. I have a couple of questions. First, the S meter and the PA current meter seem to have some interaction when the unit is receiving. Is this normal? I can see no common path between them on the schematic. Second, is there a mod that would allow the rig to select the proper sideband on each band without switching to the X position? TIA and 73,

Kevin, K9HX

682. FS: 75 MHz airport beacon transmitter

Source record: 39905

Hi all, I've got two 75 MHz airport marker beacons for sale. The units are made by Philips for Transport Canada.
Both feature output powers adjustable from 0.3 to 3 watts. Each unit comes with two
tranmitters (main and backup).
At the moment, both are set for outer marker modulation, but I'm sure they can be modulated with just about anything externally.
Mod depth is adjustable from 0 to 98 %.
The units are (were) working but the power sensing module has been removed and it will have to be tricked into operation - a simple task. Without the sensing unit, it will "think" that there is no power output and will try to switch to a standby transmitter.

If you wish to check out the pictures of the unit, go to the following site.

http://members.rogers.com/wiecek6010/sale/marker1.jpg
http://members.rogers.com/wiecek6010/sale/marker2.jpg
http://members.rogers.com/wiecek6010/sale/marker3.jpg

I'd agree with that. I don't know enough about tube era electronics
engineering to compare the two as radio circuitry design.

The R-55 was all thin gauge rolled steel sheet, stamped out, not the
best way to build a receiver in the era of heavy is better.

The DX-60 was built of much thicker metal and even had a cast steel
bezel to "protect" the meter.

Heath was just "solid" and looked expensive.

What's fun is that, now, from 35 years in the future, I can see what
held up and what didn't.

In 10 years or so, when I retire, it might be fun to refurb my R-55 as
a challenge. Restore it to stock, add an external RF stage and
preselector and go SWL'ing.

Hi,

I'm restoring a TE149 frequency meter made by RCA Victor of Canada during WWII. As the dry batteries it used are no longer available (at least as far as I know) I am intending to use a bank of ten 9 volt dry cells to provide the 90 volts HT needed. have a technical manual but the photos in it are not good enough to judge the size of the batteries used and so I'm looking for an expert on WWII batteries! I want to box the bank of batteries and a D cell up into a cardboard package of the original size, if that's feasible. The C battery isn't so much of a problem, a 4.5 volt "cycle lamp" battery will do for that.

The meter's manual recommends the following types:-

A/B battery - General 60A2L or Burgess 5DA60
C battery - General H3BF or Burgess 5360

If anyone can help with the sizes of these cells I'd be grateful for the info. I also need a pair of AVA-35 headphones with the special jack plug used by the Royal Canadian Corps Of Signals to complete the installation, if anyone has a pair they'd like to sell please get in touch.

73,

I have a Yaesu FT 902DM in good shape. Works 100% on all bands and is about a 7.5 - 8.5 cosmetically.
For those who don't know, this is a 160 - 10 meter (including 12, 17 and 30 meters) radio with passband tuning, notch filter, built in keyer, freq. memory, AM, FM (with board) and SSB and CW. Solid state except 6146 finals and 12by7a driver. Noise blanker, RIT, XIT, . Built in AC and DC supplies. Original manual. Spare set of finals & driver.
Would like $375 + UPS ground shipping or trade for HF amplifier straight up. Dentron, Heath, Drake, Swan/Cubic etc.

Sell/Trade Tentec Omni B

I'd like to sell or trade a Ten tec Omni B. It works great, looks OK. It could use a PTO cleaning but works as is (dials a little sticky).
I get excellent audio reports with this radio and it has the nice Tentec qsk CW.
Has the manual, and 30 meter and 12 meter Warc bands (no 17 meters on Omni A,B or C)

Im asking $175+ UPS ground or will trade for good dual band HT.

FS: Collins 1KW Mod Transformer, Modulator Deck and Choke. All worked good when removed from Collins 20V kilowatt AM broadcast transmitter. 4-400s and driver tubes included with spares. Many of the tired parts in the Mod deck were recently replaced. Great start for a homebrew AM transmitter. I will be attending some of the upcoming hamfests in EPA and NJ area and can deliver. Do not want to ship at this time- too heavy. Schematics included. First $425 takes it. To Heavy to ship. See pics @

Try Antique Electronics Supply in Arizona, US. They should have
direct replacements in stock for the A/B battery.

If not, let me know and I will root around and see if I can find a dead
one for you.

Hi Scott,

I couldn't see the types mentioned on their Web site but have e-mailed
them. Thanks a lot for your help, a dead cell would be very useful if it
has the female socket fitted, I'm sure I can repack the box with new 9
Volt cells.

Usually, Burgess and many others used numbers that told you what's
inside -- and by inference - the dimensions.

So a 5DA60 would be (I'm guessing) 5 D cells with 60 A cells -- and
since the 5 comes first - they are in parallel (i.e. 1.5V) An F6A60 is 6
"F" cells and 60 "A" cells; only with the letter first - the F cells in
series - i.e. "A" voltage of 9 vs. 1.5V.

"A" cells were 1-7/8 X 5/8" "D"s of course 1-1/4 X 2-1/4

best regards

<<
<< when I was 9 years old I built my first transmitter. >>
>>

<< Name the tube and I will email you a compatible schematic.
>>

Don,
thanx so much. This was in '60 but I built it out of
a '48 or so handbook so it was probably a 6L6. I remember that it was on a
wooden chasis in the book
which pleased me mightily as I had no metal working
tools then, but I had my BuddyL carpenters set, and a wood burning tool that
did fine for a soldering iron. took all summer to scrounge the parts and most
of it
to collect bottles to buy the crystal. Later, in the Navy
I cobbled a transister rig in a sardine can, and when in liberty ports run
qso's of the signal bridge.
Anyway I would greatly appreciate whatever schematic
you could send to cobble up a memory.Rufo

I suggest you check out Part 15. You might also check into getting a low-power license for AM. You have to jump through some hoops, but it's possible.

Under Part 15 on the AM broadcast band you can use 100 mW input power to the final. The antenna, transmission line and ground wire cannot exceed 3 meters total. So if you want 4 or 5 miles then you are probably not going to be running a legal station. I suggest you try alt.radio.pirate or alt.pirate.radio (I don't know why they have both newsgroups, perhaps one is for pirates with lysdexia). But as I'm sure you have noticed, the AM broadcast band is pretty crowded, so it's easy to step on a commercial station even if you have done your homework. You might also draw listeners away from the monotonous droning of these nationally syndicated talk-shows, so someone might file a complaint even if you aren't on the same freq.

Just some things to consider. Regardless, it's kind of off-topic for this newsgroup.

Part 15 says you can do it on AM although the limitations are pretty
severe.

But I figure if I can talk to some guy in Jamaica on CW with 50 mW,
100 mW on AM ought to be worth something.

I am looking for a source for two Motorola M1134 or M9625
PNP RF power transistor. After over 20 years service our
repeater 100 watt continuous duty Motorola MICOR 2 meter
power amplifier (model TLD1692D) lost 2 of the 4 final
transistors. Looking for new or working used parts, or a
replacement MICOR power amplifier, or even a non-functional
amp that has two good finals that could be salvaged.

Dave Woolf - K8RSP
dwoolf@worldnet.att.net

P.S. Does anyone have a spec sheet for either of
these transistors?

I don't have a spec sheet, but if you call On Semiconductor they might have
an archive one. I suggest you take one of the good ones, measure the hFE,
find out if it's PNP or NPN, guess at the power, and pick something with
an Ft high enough for 2M. Not too many critical specs here.

Hi all,
This unit isn't pretty, but it works. It is not dinged or scratched badly, but it has an extra control mounted near the meter, and a hole in the panel for viewing an inside mounted RF indicator lamp. I have made contacts using it with the AC supply, and the fellow I got it from had just previously used it on the DC supply, when mounted in a pickup truck. It has a speaker mounted inside the cabinet top, and includes Heath mobile mike, the mobile mount, an external, amplified, speaker, plus an original manual for HW-12A, I'm not sure if this unit is an "A" or not.
HW-12 & all accessories noted, $70
HW-12 + access. + DC supply, $85
HW-12, access., DC and AC supply, $115
all plus shipping, or can deliver to Shelby.

Then I would suggest a grid-modulated Class-C final. It's not easy, but that way you can get the most from your 100 mW. And I would also recommend the 6AK6 because they are cheap, the filament current is small, and you don't have to worry about plate dissipation. If you want to try a different way of Class-C grid modulation take a look at a pentagrid like the 6BE6. I don't know if it's ever been done that way, but it's worth a shot.

726. BC-222, BC-322 and the BX-13

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-07-31 20:29:59 UTC

The BX-13 that fits on the bottom of the SCR-194 and SCR-195
(BC-222,-322) is a rare and interesting accessory.
There's one listed u-know-where as item #1369799948.
It fits on the bottom of the rig in place of the battery and
provides terminals for externally powering the rig. There
is also a pigtail cable out the back.

I have a BC-222 that was modified by the Signal Corps.
The round plug is replaced with standard headphone and
microphone jacks and a BX-13 is installed. It seems
it was intended to interface with one of the remote control
sets like the RM-29.

Does anyone have any good information on this accessory?
Thanks,
Dave S.

Just for information: In the military scheme of equipment
numbering AN/URM-25( ) indicates a complete self-contained
unit of equipment. The URM-25( ) is made up of the SG-85
signal generator and a bunch of accessories stored in the
lid all of which have their own nomenclature. In other words,
AN/URM-25 is the designation for the whole set of goodies. If
you only have the sig gen then you have an SG-85.
Consider the famous R-390 receiver. The lack of the AN indicates
that it is a component of some system. The one I used to work on
was the AN/GRC-26D. This consisted of two R-390's, a TTY converter,
T-368 transmitter and antenna tuner plus a bunch of other things
all mounted in an equipment hut designed to be carried in the
ubiquitous 2 1/2 ton truck. Almost forgot...came with trailer
and generator set also.

73, Roger

For a single-tube 6V6 (or 6L6) rig, here's a site devoted to the Ameco
AC-1, complete with schematic. No reason you couldn't build it on
wood if you wanted.

Well, why don't you first contact the FCC and ask them what, if anything, you would be allowed to do on the AM broadcast band?

Possibly nothing. Possibly some 100 milliwatt stuff. In the range of 500 or so kc to 1600 kc, 100 milliwatt will be lucky to get out of your backyard; you'll do darn well to break the static level.

The FCC may frown on all this. Maybe if you're out if the sticks someplace you can find an empty space on the AM band, but there just ain't any in the big cities.

Best of luck...

Bob

Hi,

I've got a couple of 1629's that I'd like to test, but my tube tester
(NRI 70) doesn't have the 1629 in the manual or in the data scroll.
Can I just use the settings for the 6E5?

Thanks,

Matt

Looking for the 4000 series Ten-Tec HF Mobile antennas for the 40/30/17 and 15 meter bands. These were wrapped on PVC tubing and had adjustable whips; made several years ago. Also, would like to buy the No. 291 Tuner. Tks,
Phil

Radio-Electronics magazine did an article on a 100 mW plate-modulated
transmitter for AM broadcast, using some sort of compactron tube, in
the past decade sometime. Probably five or six years ago.

You should be able to build one yourself out of the ARRL handbook... you
basically want a single stage oscillator (either a VFO or crystal
controlled... a Pierce crystal oscillator is a nice way to go), then add
plate modulation. You'll need a transformer and some audio gain for
modulation but I suspect the hardest part will be keeping the output below
100 mW.

Especially when it's the input that needs to be held below 100 mW :-)

I have been thinking about this, and maybe the modulation could be
done with a dual triode like the 6SN7 with the plates and cathodes
tied together, but leaving the grids seperate. One grid for RF and one
for AF. Anybody ever try that?

Short of using a modulation transformer, one of the better ways to go is cathode modulation - which is used in some commercial equipment to this day. One of the simpler ways is to use two 50C5 is series - the "upper" one as a power oscillator, the lower one as a modulator (itself driven by a 12AV6. While this circuit won't deliver 100% modulation - it is type accepted by the FCC - and it takes next to nothing to churn "neighborhood" power out of it (of course then it's NOT FCC accepted... but in some parts of the world, that is of no concern).

If you're interested - I can post the circuit for you.
best regards...

I think the Radio Electronics article I referred to used a compactron
for just that. You only need 50mW for plate modulation!

What is wrong with using a modulation transformer? As you remark,
cathode modulation won't get you to 100%, and screen grid modulation
has less than wonderful linearity.

And with only 50 mW of audio power, it doesn't take a very large
modulation transformer.

You know those Talema toroids from Digi-Key actually sound pretty
nice when pressed into service as audio transformers. And they might
have one in the right general ratio ballpark....

Nothing, other than they aren't exactly an "off the shelf" item... and for the purpose expressed here - aren't needed.

> As you remark,
> cathode modulation won't get you to 100%,

I didn't say that - I said the circuit I have won't. I routinely work on a transmitter that is cathode modulated, is quite capable of 150%+ modulation and 100% - with less than .5% distortion at 5KW out (not input OUT - i.e. 10 amps into a 50ohm antenna).

> and screen grid modulation
> has less than wonderful linearity.

This I agree with.

> And with only 50 mW of audio power, it doesn't take a very large
> modulation transformer.

True - but again - it will take either some trial and error - or hand winding a transformer. But there is yet another modulation system that is less complicated... heising modulation-- and was used in a transmitter called the "Widow Maker" - designed by Mike Murphy and covered in ER#101 September 1997. This is a serious transmitter: 12BA6 Osc. 12AX7 pre-amp/driver a 50C5 heising modulator and a 50C5 PA. The B+ is 300VDC supplied by a line-powered doubler. Two points 1) it is a heising so it is a 1:1 modulation scheme - so it can't reach 100% - but 2) since you are not modulating the Oscillator - you can get real close to 100%... and it's pretty clean. As this "Widow Maker" is built - it outputs a fairly clean 2W - which of course would be appropriate for use in the HAM bands.

As noted -- nothing wrong with modulation transformers... in fact if you want to get real serious about using one - and use 50C5s... a HAM named "Tom" Call letters K1JJ reportedly designed and built a transmitter that pushes a pair of 50C5's to 25W out AM. The modulator feeds a modulated 300VDC supply to the outputs... the modulator being a four tube modulator running 600V on the modulator plates (embarrassingly high since the RCA tube manual list 150V for the 50C5!). Again - this wouldn't be "appropriate" for the BCB - but it shows what can be done with 50C5s - with their 50V filaments - they are don't need a separate filament supply (usually the Osc. preamps make up the rest of a series string).

My point was - at legal power under part 15 - the advantages of using a modulation transformers might be out-weighed by their "complications"... when there are other ways to go.

Back to my comment at the outset - what I said was - the circuit I have which uses cathode modulation is not capable of 100% modulation. The reason has not to do with the method of modulation - but the fact that the modulation is applied to the oscillator--- when you modulate an oscillator - you as you approach higher modulation levels - you start getting excessive FM artifacts - and as you get closer to 100% - the oscillator becomes unstable. Cathode modulation of a power stage (not the osc.) can easily (and does in everyday use) reach 100%. Cathode modulation is used in many commercial transmitters - including the Harris MW5 5Kw AM Transmitter I tend on a regular basis.

best regards...

From: Will White <googlyelmo@earthlink.net>
Message-ID: <3D4A27A5.DE755F3F@earthlink.net>
Source record: 39796

I need a SS audio peak/notch filter circuit schematic etc.
(drawings/photos/board layout). Looking for something simple but
effective, with at least a 20 dB peak. Since this will be for mostly CW
use, notching is less important than peaking. Anyone have a schematic
they can send, or know of one on the web? Thanks!

yeti@REMOVEcet.com wrote:

> Isn't that the same thing as series modulation?

Any modulation scheme that "supplies" power to/through an output device is "series" modulation - that includes cathode modulation (usually an active device like a tube) and plate modulation (usually a transformer, etc.). Heising is an example of parallel modulation - where some of the power is "shunted" from the output device.

I will try again on the list:

The first group are plated and made by Elco, Eby, or Cinch.

7-Pin

Size 1 for 6AL5, etc. QTY of 2
Size 2 for 6AU6, etc. QTY of 10
Size 3 for 6AQ5, etc. QTY of 6
Size 4 for 6AQ5, etc. QTY of 1 (ventilated)

9-Pin

Size 2 for 12AU7, etc. QTY of 8
Size 3 for 12BY7, etc. QTY of 1
Size 3 for 12BY7, etc. QTY of 1 (ventilated)

IREC MS24233-2 black with heat dissipation contact bars. 7-Pin
Size 2 for 6AU6, etc. QTY of 3

This group is unplated.

7-Pin

Size 1 for 6AL5, etc. QTY of 4
Size 2 for 6AU6, etc. QTY of 14
Size 3 for 6AQ5, etc. QTY of 1

9-Pin

Size 2 for 12AU7, etc. QTY of 7
Size 3 for 12BY7, etc. QTY of 3

784. Want Info on a Collapsible Loop Antenna

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-08-02 20:14:42 UTC
From: NZ8J <timcook@erinet.com>
Message-ID: <3d4ae841$0$3570$4c5ecdc7@news.erinet.com>
Source record: 39807
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.shortwave

I ran across what appears to be a collapsible BCB Loop antenna. There are no markings or writing on it anywhere, but appears to be commercially made and quite old. It is diamond shaped and is approximately 26" on a side. I has 11 strands of wire across. The wire is terminated with small pin plugs like what used to be on the older Trim headphones. The mechanism that allows it to fold up is unique in that the two side supports fold down and the top support slides into the bottom. I would like to find out any information about it. It is all hardwood except the bottom center section is what appears to be stainless steel that the top slides into. there is no mount for it, it just has a 1/4" dia, 2 " long stud on the bottom to fit in a mount of some type. I could send a picture if anyone thinks they can identify it.

thanks
Tim

Source record: 39809

This is my station so I can tell you it works great. It is not mint with typical scratching on the cabinet and a couple very very light scratches on the front panel, but it has been taken care of and babied since I have owned it the past 6 months. It performs flawlessly. The receiver is as sensitive as my R4C and has I believe a lower noise floor. Chassis is in very good shape. There is one small area on the right top side of the chassis that a previous owner must have polished. It shines like a mirror there. Guess doing the whole chassis was to much work or something. Over all cosmetics are an 8 to 8.5 and I am sure you will not be disappointed. The RV-4C is also very nice. All knobs on both units are excellent and all controls work as they should, smoothly and quietly. AC-4 supply has no hum and works as it should. The Astatic D-104 Silver Eagle amplified mic is in very nice shape. Has an upgraded Shure Bros element installed and I always get comments on my good audio. TR4CWRIT S/N is 42502.

$500.00 + shipping, or lets do some even swaping... I am selling all of my older gear to purchase something new/newer, preferably with a built in tuner. What do you have?

Paypal or Money order is aok

Hello and thanks for reading this. I just picked up a Hewlett-Packard 417A VHF detector. It seems to be a tuned AM detector that tunes from 10 MHz to 500 MHz and puts the detected signal to a speaker. It works ok. I can detect a -100 dBm signal at the lower frequencies and -90 dBm signal at the higher frequencies. It will also pick up some shortwave stations when hooked up to a dipole.

It has control called a "quench". I have never heard this term. It seems to affect the received signal when turned. There is a position of this control where the signal heard peaks in volume. What does this control do?

Thanks, John

Hi to the list!
Anyone out there got an old Heath VFO for parts? (Model VF-1) I got stung on the "bay" today. Got me one with no dial or drive assembly. Guess I better pay more attention to what I am buying . HEH HEH Also could use the tube shields that go with this VFO. Maybe I can still get the DX-35 on the air one day...

Thanks to all

There were hundreds of companies making these things in the twenties and
thirties in the big radio boom. The guys in rec.antiques.radio+phono
may have some clue but because there were so many of these it may be
difficult.

The collapsible ones are not very common. There were only a couple of brands...Lincoln Center and Nazely show up on google.
From your description, I believe this one fit into a sleeve in the top of the radio, again, something less than common since such would indicate a 'portable' radio. Here is a picture of a Kemper K-5-2 from 1927 with such a configuration.

I can't speak for that particular piece of gear, but in the olden days, "quench" meant to periodically turn the detector on and off as a means to increase sensitivity to certain signals. It was commonly done when using superregenerative type detectors. The rate and amount of quenching was often adjustable for maximizing the recovered signal, and was usually in the range of a few kHz and up.

As far as I know, modern superheterodyne receivers do not use the technique, but there could be exceptions.

Bill, W7TI

800. FS: Kenwood TS-530S

Newsgroup: rec.radio.amateur.boatanchors

I have for sale a very nice Kenwood TS-530S.

Specifications:

Ham Radio Transceiver covering 160 - 10 meter bands, including WARC bands. These came from the factory able to receive WARC, but not able to transmit on WARC until a simple modification was done. This one has NOT yet been modified. 220W PEP input on SSB, 180 W DC for CW. This radio has the standard 88S SSB filter and the 88C CW filter installed. Tunable notch filter, IF shift, speech processor, digital display, XIT. Includes copy of operation manual and an original service manual. Does not include a microphone.

Operational Condition:

Radio receives fine on all bands. No noisy switches or pots. I hooked it up to a dummy load and followed tune up procedures on 40 and 20, loaded up fine and I got about 85 watts out on 40 and about 100 watts out on 20. The only problem I noted was when I switched the meter to RF and keyed down, the meter pegs - power readings were taken using an external meter. I had a TS-520 years ago and it had a meter adjust pot on the back panel, but I can't find one on this radio. The meter sensitivity just needs adjusting. This was the extent of my testing on this radio.

Cosmetic Condition:

Very good to excellent. Front panel is excellent. A very few light scratches to cabinet, but I think you'll be pleased with this radio.

I am asking $350.00 plus shipping from zip 93401. You can check my feedback on ebay - user "oldradiostuff" If you want digital pics I can take them and email within a coupld of days.

I don't know anything about that piece of equipment, but a
"quench" control certainly makes me suspect it uses a superregenerative
detector.

A regen detector is an amplifier with controllable positive feedback, or
to look at it another way, an oscillator with a control to bring it in and
out of oscillation. Howard Armstrong holds the patent for it, #1,113,149
issued in 1914. By putting an amplfier on the verge of oscillation,
it provides a lot more gain than the straight amplifier.

You can see the patent online by visiting the US Patent Office website
at http://www.uspto.gov/patft and plugging in that patent number.

After getting the patent for the superheterodyne receiver, #1,342,885
in 1920, he was having legal problems over the regen patent. Preparing
for a court appearance, he hooked up a regen, and discovered something
he'd noticed and ignored back in 1914. The result was the
superregenerative detector, patent #1,424,065 issued in July 1922,
a mere 80 years ago.

The problem with the regen detector was that since best performance
was on the verge of oscillation, it had a tendency to start oscillating.
You'd move your hand near the receiver, the antenna would blow in the
wind, the voltage in the receiver would change, who knows what else,
and suddenly it would kick into oscillation, usually blasting the ears
of whoever had the headphones on. Tuning a regen was often a two
hand operation, one hand on the regen control and one hand on the
actual tuning control.

The superregen got around that. Armstrong accidentally got the regen detector to oscillate at both RF and at an ultrasonic frequency. That ultrasonic frequency would pulse (or modulate) the regen detector, and the result was that the detector was sort of oscillating, but turned off so quickly that it wasn't a continuous wave. You get major gain improvements, and gone were the fussiness of the regen.

He went onto explore this thing, separating out the ultrasonic oscillation into a separate stage (contrary to decades of superregen detectors that used the same stage for both functions, which resulted in not so perfect performance, and an obscuration of how the circuit works), and got the patent.

The disadvantage was that you now had a broadband detector, unlike the regen that became narrower as you turned up the regeneration. This broadband isn't really a surprise when you think of the process as modulating an oscillator with a rough waveform.

That ultrasonic frequency is often referred to as the quench frequency, and the process of pulsing the regen detector with an ultrasonic frequency is called quenching.

So assuming this unit uses a superregenerative detector, the control labelled "quench" must have something to do with this. What might be a puzzle, without looking at a schematic. Likely it is like a regen control in a regenerative receiver (indeed, set up the right way, you can push a regen detector into superregneration by advancing the regen control). Less likely, it affects the quench frequency, or even less likely, the waveform of the quenching process.

After the patent was issued, there was a period of great interest in the superregen, because it gave all that gain with a single tube, and wasn't finicky. But the tradeoffs were soon noticed, and I don't believe it ever was used much for home reception. It did help to push VHF experimentation, because it's simplicity encouraged experimentation, and the limitations weren't as problematic in the less populated frequencies (especially not with those modulated oscillators that required a wide bandwidth receiver).

So superregens were pretty much relegated to uses where cost and simplicity were the main factor, like cheap 27MHz walkie talkies, and garage door openers. I believe some early pagers used the scheme too. Likely the design is still being used somewhere.

And so people stopped experimenting with them, and stopped understanding them. The self-quenched circuit became the norm; when superregens were described, rarely was there a mention of externally quenched detectors, and even if mentioned, it was an afterthought. No wonder people tended not to understand them well, and often went off trying to improve selectivity by playing with the tuned circuit.

Charles Kitchin has done a lot of recent work on superregens, with various articles in Radio Electronics, QST and QEX. One of his articles was available six months ago on the ARRL website, http://www.arrl.org

and a search there might turn it up still. He's been experimenting with things like the depth of the quench, and even the quenching waveform, discovering that these are factors in the width of the detector.

And Electronics World out of England had a two part article on superregens in their April and May issues this year. Apart from Charles articles, the most complete coverage of the circuit that I've ever seen. (Though, one of these days I'm going to buy the pertinent years of QST on CDROM and take a look at the articles from when the superregen was new).

Hi All,
I recently picked up a receiver that has a very strong odor from being in a smokers environment. Has anyone had any luck in masking/removing this type of odor? This set has a plastic cabinet, not a metal one and the odor seems to be set in it pretty well. As always, any help would be greatly appreciated.
rgds,
Mark S.

Normally, a good cleaning with your favorite 409 substance will get rid
of it. DON'T use 'Fantastik' on the plastic without testing it first.
That being said, I've got a little bakelite Loewe-Opta AM/FM set that
still reeks for a day or two every time I haul it out to listen to.
Makes me wonder if what I'm smelling is actually 'smoker damage'.

FOR SALE:

Crystal sockets for HC-6/U crystals.
If anyone would like some, I have about 10 or 20 of these available
for $2.00 each plus shipping

These are new parts. They are teflon and anodized metal.
They have two hole side mounting, with a clip that nicely holds the
crystal in place.

Great for repairing older rigs, or for homebrewing tube transmitters &
receivers.

This is NOT the same as FT243. These are for the similar sized
crystals that have thinner pins.

E-mail me if you would like some.

I am putting up for auction a nice RACAL 6790GM Receiver. If you are not familiar with this unit it is one of those high priced, high end military receivers that cost the taxpayers a whole bunch. This one is in nice shape compared to many I have seen. The typical surplus units are missing the I.F. filters and have many scratches. Many 6790's have bad LCD displays. This one has a good display (see pics) and has (5) IF filters; The widest being 10khz. This does NOT have a narrow CW filter, the narrowest filter is 1.8khz. It is an awesome AM rx with a very slow AGC setting (3 settings in all). Listening to AM with the 10Khz filter sounds almost as rich as FM. It is also a very good SSB rx. Cosmetically it is in very good shape with some minor scratches here and there- nothing obscene. Electrically it works fine and the lithium battery was just replaced. I bought this rig 10 years ago and used it quite a bit for the first couple years. I hardly used it at all in the last few. It is fully tested and works fine on all bands. I am not shipping this unit- come see it work and take it home with you. There is no warranty expressed or implied. If you are not familiar with this type of receiver, please research it before buying, While it is very similar to Ham equipment, it does have its differences. See pics @

The crystal is for calibration only.
Send me your address and I'll post you one.

Side note: The BC-696 and T-19/ARC-5 are *not*
identical transmitters. Be sure you have the right
diagram. Also- there is no need to ruin your radio
by chopping out parts and drilling holes.
You can get it working perfectly without modifications
to your historic relic. Details if you want them.

Kind Regards,
Dave S.

How can this unit have a noise floor of -140dBm when you are stating a.1uV sensitivity? A .1uV level is -127dBm, while a -140dBm level would be .03uV. I haven't seen any Yaesu receiver that has that kind of sensitivity.

825. Need TC 2 data for checking tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-08-04 07:11:42 UTC
From: thompson@mindspring.com
Message-ID: <aiijs8$69t$1@slb4.atl.mindspring.net>
Source record: 39748

I have a Heathkit TC-2 tube tester with the 1956 original chart and all updates through 1978 but still don't have test data for such tubes as the 6EH5, 6EA6, 6EA8, 50EH5, or 5AR4. If you have a chart or list that shows any of these tubes I would like a copy. Will be glad to pay shipping and costs.

From: Ken Edem <k_edem@hotmail.com>
Message-ID: <aij0emoti1@news1.xs4all.nl>
Source record: 39750

Dear Sir/Madam,

I am undertaking a private project of building an TCP/IP Wide Area Network (WAN)
in Africa and will like inquire if you have products that can address my needs. The intended coverage area for the WAN will be 230,020 sq km giving all villages, towns and cities in this area to link into this network.

Taking into consideration of infrastructure limitation in Africa, I intend to use a wireless LAN network in cities, towns and villages to connect user and to interconnect these wireless LAN, I will like to user Radio Network (preferable a Packet Radio of 56K)

The following is what I am in need of

1. Hardware for the Wireless LAN in cities, towns and villages
2. Hardware for Packet Radio WAN
3. Any required software
4. Cost of each of the recommended Hardware.
5. Diagram outlining how to put such a network togather will very much appreciated.
5. Your suggestion, recommendation and any advice will also be very much appreciated. This is a private project I am undertaking as my contribution to my people in Africa. I believe such and infrastructure will help connect my people to the digital age and make a difference to their lives, therefore I will appreciate any recommendation you have.

Source record: 39753

Hi all:
I have a very clean Drake TR-4C, that comes with the matching AC4, and a matching MS-4.
This is the cleanest Drake TR4C I have ever owned. You will be proud to keep this on the desk!
The Drake comes with many many extra tubes (minus the finals). Original manual. This system works great and is very clean.
You can use it as it comes, or leave it on the desk as a conversation piece.
No rust, no dings, no dents.
The face plate is very clean!! No scratches.
I want to trade it for a ICOM IC-706MKIIG only.

838. FT 200 external VFO & ACC plugs

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-08-04 20:23:06 UTC
From: Merlin <spmmesenseless@sittingduck.com>
Message-ID: <hag39.2719$aa5.142126@newsfep1-win.server.ntli.net>
Source record: 39763

Hello gentleman,

I have just acquired a mint FT-200 with the external PSU&Speaker.

Only problem is the seller told me that the ACC socket on the back needs a plug with pin 1-2 bridged, and also a plug for the external VFO socket, again with something bridging some of the pins (he could not be specific on this plug).

Does anyone know;-

A: Is the info correct about the ACC plug? is it just a case of bridging pin 1 & 2 ?

B: What is the deal with the VFO plug?

C: Does anyone have these two sockets they are willing to sell? I understand that they came as merely plug in units, not cables? Anyway, cash waiting if anyone has them.

I love old radio equipment, and would love to get this radio up and running for my anticipated 'A' license, currently i am G7JFI studying 14 wpm hard, as I intend to use CW, not just obtain the ticket.

Thanks in advance,

73 de G7JFI , Terry

839. WTB Hallicrafters SX-42 tuning shaft

Newsgroup: rec.radio.amateur.boatanchors

From: Frank Grigaliunas <fgrig@icehouse.net>
Message-ID: <Ung39.77045$Yb1.80881@sea-read.news.verio.net>
Source record: 39764

Does anybody out there have a wrecked SX-42 they're parting out? My gear drive assembly fell off the shelf and the shaft for the small tuning knob broke. To see which part I'm talking about, look at http://www.icehouse.net/fgrig/shaft.JPG. If you'd like, I could buy the whole gear drive assembly. (I might end up buying an entire junk radio just to get the shaft.)

Thanks,

Frank

Source record: 39765

Greetings!

I have an SX-115 for sale. It is not mint, but it's
not a dog either. Physically there are some scratches
on the cabinet. The front panel is fine, with a little
of the "receive/standby" lettering slightly rubbed off.
There is a small dent in the lower right corner which cannot
be seen from the front. There is dust behind the dial
glass and dust on the chassis. No holes, no mods, all
original. None of this is a big deal if you want one
of these receivers. I am just trying to be as critically
honest as I can.

I can find no fault with the electrical performance.
It works great! I have the manual.

$750 NO SHIPPING.....

I would really like to have someone come and look at
this rig and take it off my hands....thanks!

As far as I know, the Y suffix indicates the low-loss (micanol?) tan colored base, rather than the standard black bakelite base. At least that's the case with octals such as the 6SB7Y. 10's? Seems likely, but I'm not 100% sure.

FOR SALE:

HEATHKIT DX35 Transmitter in nice shape:

Comes with one crystal and the manual.

Good power cord, all original
knobs etc. Crystal cover is there too.

Working condition. For 120V AC operation

Send e-mail for photo and details.

Clean, attractive SR-150 and PS-150 power supply.
Mid-60s 5-band 80-10M SSB/CW transceiver.
SR-150 has Halli HA-60 PA cage exhaust fan.
PS-150 rebuilt/recapped.
All 9-9.5 in and out. No smoke, no rust, no rot.
Serial numbers intact.
Up to specs. Full power out. Runs cool.
Excellent on-air reports.
Copy of manual.
Cases repainted slightly darker than stock.
$300 plus shipping from 87123.

Original MR-150 mobile mount for SR-150.
$40 plus shipping from 87123.

Your Email address "bounced"

Checkout the following

http://www.mif.pg.gda.pl/ homepages/frank/sheets/049/1/10Y.pdf

http://www.mif.pg.gda.pl/ homepages/frank/sheets/021/1/10.pdf

Type 10/VT-25 Tube List - SND Tube Sales

http://www.vacuumtubes.com/price6.html

The Type 10 tube is a filamentary triode tube with a filament voltage
of 7.5 volts and filament current of 1.25 Amps. It has a standard UX4
base 4 pin base. It is typically used as an audio amplifier tube. Max
Plate voltage is 425 Volts and Max Plate Dissipation is 12 Watts.
The US Military designation is VT-25. There were two types of filaments
used with 10's. Most common is the Thoriated Tungsten variety which
have short plates and glow quite brightly when the filament is activated.
There was also a coated filament variety which had "long" plates. These
were called VT-25A's Contrary to popular belief, these DON'T have a
higher power rating. Early 10's were in the "globe" shaped envelope (S)
and later ones were fitted with the "ST" shaped envelope. There were 2
different sized ST envelopes used. (small & large)

The British Military list the equivalent of the 10 and 10Y as the
CV603.

The tubes were used in the old BC191 & BC375 Transmitters from WW2.

I saw the 10 tubes advertised at $50US and the 10Y at $65US.
Not exactly cheap!!

It's only for calibration. Has no effect on the actual operation. The standard xtal for a T-19 is a 3500 kc. job that looks like a metal tube with a handle on top.

>either way does anyone
>have one from a long forgotten, partred out unit sitting on a shelf

I'm told that if you remove the meter and perhaps the transformer, you can dunk the rig in water for a good cleaning.

That said. I bought an SB-303 on eBay that reeked of cigarette smoke. It was bad. The knobs, front panel and cabinate were discolored from the smoke.

I didn't go the dunking route.

I filled the bathtub with warm water and a mild, 1 cup to a full bath tub, bleach solution and dropped the cabinate in. I let it sit for about 10 minutes, rinsed it off, and the cabinate turned a nice green-grey. Toweled it off and dried it in the sun.

Then I took a wet rag. Almost dripping wet, and wiped down the interior including the circuit boards, caps, everything I could reach. I wiped down the wiring harnesses and the all exposed surfaces. I wiped the bottom, the componets on the boards, everything.

For the front panel, I used 409. Shot it on and wiped it off with the wet rag. CAUTION. While the 409 did take the brown off the front panel, it also took a layer of the white lettering. Use 409 sparingly and don't let it sit on the panel too long.

I had all the knobs off as well as the bezel.

For the knobs, I took the wet rag, mild bleach, and carefully cleaned each knob. This is a Heathkit and the knobs have grooves above the flutes. I used the rag on a wooden stick to get the brown out. I spend 15-20 minutes cleaning and adjusting each knob anyway. (I space them to 1/16th inch using a feeler gauge, polish and tighten the skirts, replace the setscrews with stainless steel Allen heads if they are blade type, etc.)

I also shot the switches and controls with De-Ox-It and lubed the bearings with light oil using a "one drop" applicator.

When I was done, the smoke look was gone but the smell was still faintly there.

Over the next month everytime I got into the rig to adjust something, I wiped down the surfaces.

It's fine now. There is a slight "electronic" or "chemical" smell but that could be the De-Ox-It, the light oil, or the residue of the smoke but if you didn't know, you would not know that it had been a smoker.

I've spent a fair amount of time tuning and adjusting the receiver and it's my better SB-303 (I have 2 others).

874. Re: Quench? What is a quench control?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-08-05 15:43:34 UTC
From: JB <ac6tk@nospamcybertime.net>
Message-ID: <aim6ff$95k$1@madmax.keyway.net>
Source record: 39697
Cross-posted to: rec.radio.amateur.boatanchors,sci.electronics.equipment

Regeneration could be used below the oscillation level to increase
gain and selectivity with a normal CW/SSB/AM receiver, or well
into oscillation as a BFO on lower end AM/SW receivers. I recall the
Q multipliers that could be added to any existing receiver to accomplish
this. It worked as a kind of adjustable RF preamp. They could really
bring out a CW signal. The same idea was also used by some radios
in the IF. The quench control was reduced to extinguish oscillation
and adjust the gain and selectivity. Usually there was also a tuning
control to adjust the peak through the passband.

: >
: > Thanks, John
:
: I don't know anything about that piece of equipment, but a
: "quench" control certainly makes me suspect it uses a superregenerative
: detector.
:
: A regen detector is an amplifier with controllable positive feedback, or
: to look at it another way, an oscillator with a control to bring it in and
: out of oscillation. Howard Armstrong holds the patent for it, #1,113,149
: issued in 1914. By putting an amplfier on the verge of oscillation,
: it provides a lot more gain than the straight amplifier.
:
: You can see the patent online by visiting the US Patent Office website
: at http://www.uspto.gov/patft and plugging in that patent number.
:
: After getting the patent for the superheterodyne receiver, #1,342,885
: in 1920, he was having legal problems over the regen patent. Preparing

: for a court appearance, he hooked up a regen, and discovered something
: he'd noticed and ignored back in 1914. The result was the
: superregenerative detector, patent #1,424,065 issued in July 1922,
: a mere 80 years ago.
:
: The problem with the regen detector was that since best performance
: was on the verge of oscillation, it had a tendency to start oscillating.
: You'd move your hand near the receiver, the antenna would blow in the
: wind, the voltage in the receiver would change, who knows what else,
: and suddenly it would kick into oscillation, usually blasting the ears
: of whoever had the headphones on. Tuning a regen was often a two
: hand operation, one hand on the regen control and one hand on the
: actual tuning control.
:
: The superregen got around that. Armstrong accidentally got the regen
: detector to oscillate at both RF and at an ultrasonic frequency. That
: ultrasonic frequency would pulse (or modulate) the regen detector, and the
: result was that the detector was sort of oscillating, but turned off so
: quickly that it wasn't a continuous wave. You get major gain
: improvements, and gone were the fussiness of the regen.
:
: He went onto explore this thing, separating out the ultrasonic oscillation
: into a separate stage (contrary to decades of superregen detectors that
: used the same stage for both functions, which resulted in not so perfect
: performance, and an obscuration of how the circuit works), and got
: the patent.
:
: The disadvantage was that you now had a broadband detector, unlike
: the regen that became narrower as you turned up the regeneration. This
: broadband isn't really a surprise when you think of the process as
: modulating an oscillator with a rough waveform.
:
: That ultrasonic frequency is often referred to as the quench frequency,
: and the process of pulsing the regen detector with an ultrasonic frequency
: is called quenching.
:
: So assuming this unit uses a superregenerative detector, the control
: labelled "quench" must have something to do with this. What might
: be a puzzle, without looking at a schematic. Likely it is like a regen
: control in a regenerative receiver (indeed, set up the right way,
: you can push a regen detector into superregneration by advancing the
: regen control). Less likely, it affects the quench frequency, or
: even less likely, the waveform of the quenching process.
:
: After the patent was issued, there was a period of great interest
: in the superregen, because it gave all that gain with a single tube,
: and wasn't finicky. But the tradeoffs were soon noticed, and I
: don't believe it ever was used much for home reception. It did
: help to push VHF experimentation, because it's simplicity encouraged
: experimentation, and the limitations weren't as problematic in the

: less populated frequencies (especially not with those modulated
: oscillators that required a wide bandwidth receiver).
:
: So superregens were pretty much relegated to uses where cost and
: simplicity were the main factor, like cheap 27MHz walkie talkies,
: and garage door openers. I believe some early pagers used the scheme
: too. Likely the design is still being used somewhere.
:
: And so people stopped experimenting with them, and stopped understanding
: them. The self-quenched circuit became the norm; when superregens
: were described, rarely was there a mention of externally quenched
: detectors, and even if mentioned, it was an afterthought. No wonder
: people tended not to understand them well, and often went off trying
: to improve selectivity by playing with the tuned circuit.
:
: Charles Kitchin has done a lot of recent work on superregens, with
: various articles in Radio Electronics, QST and QEX. One of his articles
: was available six months ago on the ARRL website, http://www.arrl.org
: and a search there might turn it up still. He's been experimenting with
: things like the depth of the quench, and even the quenching waveform,
: discovering that these are factors in the width of the detector.
:
: And Electronics World out of England had a two part article on superregens
: in their April and May issues this year. Apart from Charles articles,
: the most complete coverage of the circuit that I've ever seen. (Though,
: one of these days I'm going to buy the pertinent years of QST on CDROM
: and take a look at the articles from when the superregen was new).

876. MRCA Military Radio Meet

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-08-05 16:23:54 UTC
From: skywaves@bw.webex.net
Message-ID: <b9778a4.0208050823.707a8f23@posting.google.com>
Source record: 39699

Hi All,

Just a reminder that the MRCA (Military Radio Collectors Association) will be
holding their second annual Military Radio Meet on September 6 - 8 (Fri., Sat., Sun.)at the West End Fairgrounds, Gilbert, Pa. The meet is held in conjunction with the Red Ball Military Transport Annual FallRally & Swap Meet. This is a very large Military Vehicle Show & they have their own flea market (currently over 210 vending spaces sold) which includes all types of WWII vehicle surplus parts & just about anything else related, including radio equipment.

This is the first time for this show to take place at the West End Fairgrounds. This new location is actually much better & larger than where it was previously held at the Tobyhanna Army Depot. We now have our own building approx. 40' x 70' for displays, demonstrations & talks. In addition, we have a grove area that will provide participants who wish to set up operating stations with plenty of trees for antennas & several of these trees have 120v outlets that we can utilize.

Please check out our website: www.milradio.org for complete details such as show
schedule, maps, registration forms, etc. Pre-registration is not a must but it would be appreciated as this will help us better plan for our meet.

Hope to see you at the meet!

Best Regards,
Steve Finelli N3NNG

This is from memory so take with a pound of salt...

14.2, 7.2 and 3.7 MHz are at 12 o'clock.

The 21.2 position is the short line just above the 3 o'clock position (second to last short line, perhaps you could call it the 2:30 o'clock position).

The 29.2 position is the long line above the 21.2 line. It's the third to last long line, perhaps aptly named the 2 o'clock position.

From what I remember the higher the frequency the more clockwise or 2-3 o'
clock at 29.2
I am missing the page 105 fold out :(
Note: The book says
"These coils must be adjusted in the proper sequence as follows"
= driver grid for max

3.7.... yes first
29.2
21.2
14.2
7.2
Then repeat it.
When you are done see if the transmitter and receiver peak the same, if not
Heath had a bulletin to fix that

-Joe

I am putting up for sale a nice RACAL 6790GM Receiver. If you are not familiar with this unit it is one of those high priced, high end military receivers that cost the taxpayers a whole bunch. This one is in nice shape compared to many I have seen. The typical surplus units are missing the I.F. filters and have many scratches. Many 6790's have bad LCD displays. This one has a good display (see pics) and has (5) IF filters; The widest being 10khz. This does NOT have a narrow CW filter, the narrowest filter is 1.8khz. It is an awesome AM rx with a very slow AGC setting (3 settings in all). Listening to AM with the 10Khz filter sounds almost as rich as FM. It is also a very good SSB rx. Cosmetically it is in very good shape with some minor scratches here and there- nothing obscene. Electrically it works fine and the lithium battery was just replaced. I bought this rig 10 years ago and used it quite a bit for the first couple years. I hardly used it at all in the last few. It is fully tested and works fine on all bands. I am not shipping this unit- come see it work and take it home with you. There is no warranty expressed or implied. If you are not familiar with this type of receiver, please research it before buying, while it is very similar to Ham equipment, it does have its differences. I am asking $875. See pics @

I bought a used HRO-60 receiver in 1975 and was very pleased with it for the 20 years that I used it. SSB was a pain to hear as you have to manually adjust the BFO offset but, once the receiver warmed up it was very stable. I have recently moved to a PLL type receiver for ease of tuning etc. but the HRO-60 still works fine.

889. Getting an "ARC-5" Transmitter Running

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-08-06 00:52:22 UTC
From: David Stinson <arc5@ix.netcom.com>

NS wrote:
>
>...I finally managed to purchase a ARC5/T19 ransmitter(3-4mhz)...
> ...please e-mail me directly with info...

(copied to the list for general information)

There are few of these historic radios
left in their original condition.
Please don't drill or destroy another.
It's not required.

The only "modifications" needed to a Command transmitter
are simple and 100% restorable.

1. Replace the three capacitors in the bathtub on the back.
Even if you think they're good, they're bad. Trust me on this.
Leakage in this bathtub cap causes big headaches.
If you're not crazy like me (I open the bathtub, replace
the caps then seal it back), here's an easy way-
Snip-off the leads of the bathtub cap, leaving the wires intact.
Make sure multiple wires stay connected to each other, just not the cap.
Coat them with insulation. "Liquid Tape" by GC is good and available
at most electronics parts places, or just use tubing.
Leave the wires where they are as their distributed capacitance
is part of the design.
Get some of those little mylar .047s from the parts house.
They're about the size of a pencil eraser. Trace the wires from
the bathtub to where they connect, then solder the cap between
there and the nearest ground.

2. Unsolder one lead from the antenna relay. Roll the spring
contact from the loading coil around so it's always in contact.
Either put some Cramolyn on this contact or polish it as
detailed below.

3. Check the selector relay and make sure that the osc. B+
contact makes before the 1625 cathode contact. Carefully bend
them to make sure. You key the rig with this relay.
The contact is on the back plug and is called the "selector."
Put a "spike killer" diode across the relay coil winding
(anode to positive voltage lead) to keep the inductive
kick off the filaments and keying leads.

That's it. All the hole drilling and output hacking and
"de-TVIing" of the 50s and 60s was completely unwarranted.

If you really want to make it easy to tune and remove
a source of possible "chirp," here's a good exercise.
This is some work but well worth the effort-

All the roller coil assembly metal parts (less screws)
are plated in silver. This gets oxidized (that black stuff).
When you're loading the rig, you'll notice "intermittent" power
out as you roll over the gunk. If your loading point is
cruddy with this black stuff, it will heat when you key
and change the loading enough to introduce some chirp.

Go to Wally World and get some cream silver polish.
Don't waste your money on the "dip" stuff.
Put a towel or other "parts catcher" on your bench.
Completely disassemble the roller coil unit.
The leaf-spring contact on the coil axle (ceramic support end)
needs to go back right-side-up, so you might want to mark it
or just notice how it goes back in.
Use a linen or other lint-free cloth to polish the coil,
roller bar, roller, axle leaf spring contact etc.
Use a "Q" tip to polish the inside of the roller wheel as well.
Once all the crud is polished away, rinse off all the polish
with clean water and allow the parts to completely dry-
especially the coil. Don't want water under the turns.

As you reassemble, lubricate the thumb-wheel end and thumb-wheel
axles with petroleum jelly or graphite. Do not lube the
ceramic-to-coil joint, but do lubricate the roller coil axle and
leaf-spring contact with paste Cramolyn or other
good contact lube. Be careful not to overtighten the screws
that are threaded into the ceramic.
Just finger-tight them and lock them in place with some
paint or fingernail polish. Seal the roller-bar screws
with paint as well. Now enjoy easy tuning.

On "chirp-" This is a classic MOPA rig. While you can expect
some small amount of chirp, I've got many transmitters in which
it is difficult to hear any at all. I've never had one that,
after I finished restoring it, had what I call "bad" chirp.
Noticeable chirp in an "ARC-5" transmitter
can usually be traced to a few sources.
Here they are in order of their usual appearance:

1. Poor power supply regulation.
Your supply needs guts enough to maintain 500-600 VDC at 200 mils
and 24 VDC at about 2.5 amps.
(if you don't want to use DC on the fils, put a diode and
filter cap at the relay)

2. Leaky bathtub caps. Reduces osc. drive, messes with
Osc B+, reduces grid bias to the 1625s. See above.

3. Cruddy output tuning network or antenna connections.
Anything that changes the loading- like heating the crud
between the roller and coil-
is going to pull the freq of an MOPA rig.

3. Low under-load emission in the 1626 Osc.
Swap it out with a known-good one.

4. Grid emission in one or both 1625s. Especially
noticeable in one that's been run at 800+ volts.
Swap with known good ones.

I've seen changed resistor values in the osc. stage
and misc. other stuff, but these four are the usual bandits.
While I've heard of the other mica caps going bad, I've
worked on many dozens and never seen it happen. I've
also never seen that custom "button" cap in the MO stage go bad.

On an ARC-5 Power Supply:
The best way to get power to the rig is the way the
original engineers intended. I don't mean a dynamotor-
I mean a 550 VDC source and a divider.
Both the AN/ARC-5 and SCR-274N units derive their voltages
using a voltage divider network. We'll draw a divider that
matches the one used in the original power supply.
I very much recommend it.

Primary power should be 24-28 VDC at about 2.5 amps for relay
and filiments and B+ of 500-600 VDC at about 200 MA.
We will assume the designer's specs of
550 VDC B+ and 26 VDC filiment.
Get a pencil and a piece of paper. Follow along:

Place a dot on your paper and call that point "A".

Draw a line right to point "B".
>From point "B", draw a line down and
connect a 20 K-ohm, 5 watt resistor here.
Call the other end of this resistor point "C".

Draw a line right from point "B" to point "D".

>From "D", draw a line downward
and connect a 15 K-ohm, 10 watt resistor.
Call the other end of this resistor point "E".

>From point "E", connect a 100 K-ohm 1 watt resistor to ground.

Draw a line right from point "D" to point "F".
Draw a line right from point "E" to point "H".

+550 VDC in at point "A".
+550 VDC out to PA plates at point "F".
+270 VDC out to PA screens at point "C".
+200 VDC out to Oscillator at point "H".

Bypass all outputs with about .01 ufd to ground.

If you wish to regulate the screens for AM,
connect an 0D3 VR tube with a .5 ufd at 300VDC
cap across it between point "C" and ground.

If you use this network, and use correct antenna
matching, you will be able to properly load and
tune your command set transmitter to rated output.

Voltages lower then 550 VDC will work just fine
with the same network. Voltages much higher will
cause MO drift and increase chirp.

On Loading an Antenna:

The SCR-274N and AN/ARC-5 radios were not designed
to load a 50 ohm antenna. They were intended for
antennas of about 5-12 ohms. In order to load
a 50-ohmer you'll need to do one of two things:

Cheap and easy- put a good quality NP0 (no thermal drift)
capacitor of at least 1000 volts between the antenna terminal
and the coax center conductor (in series).
For 40 meters, use 50 PF. For 80 meters, use 75 PF.
Non-NP0 caps may heat, drift and cause chirp.

More trouble but better:
Wind a 4:1 "UNUN," which is an unbalanced to unbalanced balun,
and use it at the antenna connector to match the coax.
The design is available in the Handbook.
Will cost a couple of watts but worth it.

I hope these tips will be of value to you.

Good Luck with it!

David,

I know you specified "Heathkit", but if that's not a requirement,
you might broaden your search to other makes. EICO made a number of
models: 147A is very popular (for good reason) and always on eBay.
The PACO Z-80 is similar, but harder to find. I'm sure there are
other examples.

Greg

For Sale:

Lincoln 6 Meter AM transceiver. A genuine 1961 classic!

This shoebox-sized transceiver was sold by Allied Radio
in Chicago as a "step-up" from the Heath "Sixer", and is
a real beauty!

It's transmitter is crystal-controlled and plate modulated
for crisp and clean audio, with a power input of 7 watts.
The receiver is a sensitive superhet, with a built-in noise
eliminator and AVC. An RF stage precedes the receiver's
detector for excellent sensitivity and selectivity, and to keep
RF radiation to a minimum. Covers the entire 6 meter band
from 50.1 Mhz to 54 Mhz. The rig has a built-in A/C power
supply, or it can be operated using an external 12 volt DC
power supply (not included).

Here's your chance to own a rare "'60's classic" boatanchor,
and this one's in absolutely beautiful condition throughout.
Comes complete with operation manual including complete
schematic.

Just add a crystal and a mike, and join in the 6 meter AM
fun with this sharp looking little rig. Price is $60 plus $15
for very well-packed insured shipping (USA only).

If interested, please reply via e-mail for further information.

I have used the HRO-50/60 over the past 40 years in military/commercial and amateur operating. I have use it on board ships and ashore. I have routinely relied upon it for day-in and day-out MF (400-500 KHz), and HF (2 to 30 MHz) communications when the chips were down. I can compare it to the 51J-3,4, the R-390, the SRR-11, 13A, HQ-180, and several other one of a kind, similar communications receivers. For my money the HRO-60 always came out on top. Some of the others had features which were slightly better, and in some cases, features which were non-existent on the HRO. The HRO, however, is hard to beat for audio quality, has great band spread over the ham bands, and one of the best crystal phasing (adjustable selectivity) features ever. It doesn't have a product detector for SSB but does an excellent job without. Very big, very stable, very good tuning ratio with a very nice feel. Probably best suited for CW - it's a real man's radio. I have two at my operating position, and as I'm not really a transceiver guy (though I own several), mine get constant use for CW, Data and SSB operations.

Thanks for the info. I actually have an EICO model 147A(I think) that
I am slowly restoring. It was a bit beat up. I reversed the black
flocked screen speaker grill and that part looks like new. The filters
are bad and I'm swapping those out. Eye tube works great. Eventually
I'll finish it up. Was PACO another brand that was inexpensive but
acceptable quality? I've seen that name around in the past but have
not known much about it.

Source record: 39648

Easy - just look at the schematic and figure out what's required. Don't know how to do that? Get a copy (you should already have one) of any handbook and learn about power supplys. To be honest, they are not that critical in most applications. Just determine the type of choke required (swing or otherwise) and make sure that you have at least the minimum inductance called for in your calculations. Otherwise you can always just look for something with the same physical features of the one you already have (size, weight, winding size and wire size, etc.). I am assuming, of course, that you are not looking for an old (exact) replacement part. Reverse engineer it, replace it with something close, check output voltages under load, check for any component heating - nothing to it. Good luck!
P.S. - You can always rewind it (thats another challenge I can highly recommend).

RF Parts in California is also a useful supplier for various parts, once you determine what has failed.
http://www.rfparts.com

IF you have a bad transformer, send it to Peter Dahl. Don't fool with anyone else. Peter reworks/rebuilds for the government, military and commercial broadcasting industry.
The fact that he performs the work for amateur and short-wave hobbyists is RARE.

IF you think it is too much $$ for you, pack it together and sell it on QTH or eBay as a "parts" unit - stating what has failed or known wrong. Take the money and buy a working one - they are showing up in volumes -- due to the rising cost of the "sweep" tubes (6KD6) that they run on (no longer made, but a few Eastern European and Chinese substitutes available)

I have for sale in very good condition a Drake R-4B receiver. I have the orignal box with the round foam cushions and the original manual....I would rate it a 7 1/2 out of 10 its from a non-smoker. It is working and no problems. It has great audio for a tube receiver. I will take $175 plus shipping. I can be reached at (508) 821-2993 or email for any questions......WZ1U Steve / Lakeville, Mass.

From: Lou <tech@dp.net>
Message-ID: <aj86eq$13b6$1@news.dp.net>
Source record: 39671

FS:

1 - CRT out of a Tek 533 scope. Tek PN 154-0165-00

When the scope was torn apart, one trace of the two was not working. I'm pretty confident it was the dual trace plug in, at fault. The trace that was there was nice and bright. So, with that in mind, this CRT should have some life left to it.
It comes alone. No wires or sockets or anything else attached. E-mail picture available. Not sure of my items? Check out my E-Bay profile. I only advertise what I know to be the case.

$15 "plus" shipping - insured. Money Orders only. SOLD AS IS.

If interested, e-mail me your intent to send payment along with shipping address.

Message-ID: <aj87hg$13e7$1@news.dp.net>
Source record: 39673

For Sale:

1 - Tek 533 Scope Power Transformer. It has a number of 120-140 on it. Not sure if that is the PN or not. Was removed from the same scope the previous advertised CRT came from. It was working, all but one of two traces, as I said, I believed to be the fault of a bad dual channel plug in.

There is a "wiring" plate on it showing some hook up info. There is also a good part of the "wiring harness" on the transformer.

SOLD AS IS

$15 "plus" shipping It does have some weight to it, so be prepared to pay some cash for shipping. MONEY ORDERS ONLY!

If interested, e-mail me your intent to purchase along with shipping address.

VHF Marine radio SI-TEX 950 SCAN. In exc operating condition, covers all Marine channels and NOAA wx channels. Has mic, but no power cord, mounting bracket or manual. A universal mounting bracket is easy to come by. I temporarily wired a power cord to check it out and it puts out about 2.5 watts on lo and 25 watts on high power into a dummy load. receives the wx channel great. No way to check the marine channel reception from this location, but it scans fine. Physical condition is about an 8, only because the case is faded. Front panel is fine. $30+ shipping Thanks
Tim

Just a shift from all the FA and FS stuff. I would like to read abt how sum of the membrs got hooked.
For myself it was in 1958 when my grand father gave me an old Philco 3 band rxcvr. Soon after I fiddled with it and got it working I found abox of QST mags from
the '30s and a 1948 ham handbook.If my mother had found me playing with those voltages she'd have tanned me good! built my first xmtr in1960. got my novice with the help of a nieghbour whom I think was fairly tickled that a nine year old boy was so focused. He gave me a lot of help. My XYL just rolls her eyes and
put a 500 pound load limit on what I can bring home(hi)
I have mostly Heath with a couple of Nationals and Hallicrafters, a mess of hombrew including a monster kw station in a 6 ft cabinet. My main is a Yaesu FT 901DM. So lets read from the rest of you.Tnx.Rufo

David,

I can't tell you much about PACO except by observation of the Z-80 I acquired. Seems newer then my 147A; but the PACO is almost mint compared to an average EICO, so it might be misleading. Quality is similar to EICO, Heathkit, et al. I would have to call it a functional copy of the 147A. I think the Z-80 is much less common.

Get your 147A working.... you'll be happy with it. I too reversed the speaker grill (how many times will that trick work?), tested the tubes, shot the controls with cleaner and had a working unit except for the watt "meter". After correcting a wiring error, it worked but read low. After much head scratching, I tested the diode involved and found that it was silicon. Replacing it with a 1N34A made everything right again.

These things were built by who knows, with variable skills, and have a long and unknown history. I guess it's not real surprising they might need a little help in coming back to life.

As you probably know the paperwork for the 147A is online; a decided atvantage for the more common brands. And be careful with the "noise" function.... I haven't used it much myself, but hear it's very useful. It won't kill you (very low current) but could give a nasty surprise (~130 VAC).

Greg

Hi all, Got my first really nice looking piece of vintage gear
at hamfest, a pristine looking hallicrafters s22r. I was able
to find a operating manual and print it(used the xnview free
software) which is great. Wondering about the year made and any
history on this neat receiver. I'm like a kid at christmas , can't
wait to get home from work and sweep the rice boxes off the shelf
and fire this puppy up. I was told its definitely older than me so
I guess in the early 40's.
Thanks Jim KW3U

I have several pcs of this small directly heated triode in stock. The valves may be used, but I have tested them myself and they are all excellent. You can find a picture and technical data on my web site - www.demostenes.no Just search for 3A/110B in the left hand corner.

Regards,

Arnold Goks&#65533;yr

Congrats on old BA, neat receiver. Raymond Moore's communication book
list it as being manufactured from 1490 to 1946, selling at $64.50
the straight s-22 was made in 1938.

Good luck with it and Happy Listening!

964. FS: www.Boatanchors.com web site domain name

Hello all,

I'm entertaining the idea of selling the boatanchor radio
web site I started back in 1996. I NEVER get around
to updating it, and I'll be there's folks who'd be interested
in selling radios via the name. I'm just not that much into
collecting radios as I once was, and probably won't be
again.

www.boatanchors.com

I have a steady stream of traffic - do a Google or any
other search and you'll find scads of links to the site. It's
one of the most established boatanchor sites around.

A buyer would also get my boatanchors@hot mail
email account to go with it. Seems like this would be
a good site for selling off old radios.

Any interest or offers? No idea how one sells a domain
these days, price wise - the transfer would be no problem
and could be done in a week or two.

Thanks

David Ellison WB7AWK

Well, I'm not sure I qualify. I'm not too fond of the 1950's big and
heavy look. I own a Hallicrafters SX-101A and an HT-37 which I am
"this close" to giving away to a fellow who has been asking for them.

I've been fixing and refurbing SB-303's and an SB-200. I've got three
SB-303's running well and a fourth "guarenteed broken" on the way from
eBay.

I'm trying to figure out the mysteries of the LMO and the LMO drive.
I want to get these things working right.

Snip<<<
It was 1957/8 or 59. My parents and I were in Miami for a winter visit with the Taylor family. The son, Ken, had been in a terrible accident and was years in recovering. Al, the father got him into building Heathkits. I was not allowed to touch anything but really wanted to start a station of my own. Unfortunatly my father would not have a wire/antenna or anything else that might attract lightning!!!!!!!

Well, when I was old enough, I started out with CB mobile and graduated to amateur radio after one of my buddys, WD9IGX, Tim, got into "ham" radio. Started out with a DX100B and a little, I forget what brand receiver. Got a Heathkit Mowhawk, then a B&W 5100B. Acuired several 5100Bs and a R309A. Re-assembled a basket case Johnson Desk Kilowatt and bought a mint Ranger to go with it. Came across a B&W side band adapter, was and still is intermittent in operation. Picked up a Globe Champion 300 for $15.00 at a charity sale for a guy to use as a parts radio but he did not want it. Cleaned it up and it works. Came with those elusive 9909 tubes too. BTW, a few years later I bought 2, 9909 tubes from an old timer who told me he had donated a champion a few years prior to that and just found the tubes a couple of days before the fest. Pulls, but good!!! The 9909s were a whopping $2.00 a piece :<}

So, I have a Ranger, desk KW, Mowhawk, R390A, Globe Champion 300, Several (3) B&W 5100Bs, a B&W 5100, a B&W sideband adapter, a mint Johnson KW Matchbox with meter and coupler and a Icom 706MKIIG. The Icom gets the most use. I do miss the relay noise of the Desk KW.

The FL 2500 is virtually the same as the FL 2000. The 2500 had 160 meters where the others only cover 80 to 10.The FL 2100 used 572B's as i recall. The transformer from the FL2100 will probably work and the Peter Dahl is a good choice. Dahl will build one to specs if they don't have one off the shelf.

I hope its just the diodes not the transformer. I think I saw the 2500 listed and I recall it said it was working....guess not.

Hate to say it but if the transformer is gone and unless you just want to spend a bunch on the amp as a collector you might as well sell it for parts or just junk it. It is doubtful if the transformer out of a FL 2100 will work as it uses 572 tubes that operate at a much higher voltage (probably about 3 times as much) .

At one time the 6KD6 tubes were inexpensive compaired to other tubes but now they are very high in cost.

Now just how is the FL 2100 transformer going to work in the FL 2500 as the voltage for the 572 tubes are around 3 to 4 times the voltage of the 6KD6 ?

What about wiring the primary for 240 and use a full wave bridge on the sec.
(be about 800 volts)
Problem is you could only run it on 120 VAC and have to rig up a heater
supply

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday August 18th 2002
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $5 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $20 for the first and
$15 for each additional at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 145.23- (PL 88.5) W1BOS/R and
W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

For more info / advanced reservations 617 253 3776

********** $1 buyers discount with hard copy of this notice ************

<<<<<<<<<<<<<<<<<<<<<<< cut here >>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>

Mail the coupon below by the 5th of the month to be a Prepaid Vendor.

FLEA at MIT 2002 Rates

SELLERS

Subject: [AMRadio] Docket 20777 again!

: Minute 64 adopted at the most recent
: ARRL Board of Directors meeting on July 19-20, 2002:
:
: http://www.arrl.org/announce/board-0207/
:
: 64. On motion of Mr. Frenaye, seconded by Mr. Stinson, it was VOTED that at
: the next practical opportunity the ARRL shall petition the FCC to revise
: Part 97 to regulate subbands by signal bandwidth instead of by mode.
:
: The last time that was tried, back in the 70's, the proposed bandwidths were
: 350 Hz and 3.5 kHz. That was Docket 20777, the infamous FCC proposal that
: would have killed AM on the HF bands. It was only through the strong
: response of the AM community that the measure was rejected. We need to get
: busy on this one!

1011. Re: ***The ARRL and the AM mode***

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-08-14 23:31:11 UTC
From: Dan/W4NTI <w4nti@mindspringnospam.com>
Message-ID: <ajepe8$6lt$1@slb5.atl.mindspring.net>
Source record: 39634

Why is it that the ARRL seems to think AM is such a problem? Perhaps they should listen to some of the so-called 'enhanced audio' signal in the alleged SSB mode.

AM operators stay in very narrow band segments and the only problems I see is when a slope bucket gets too close.

Not to mention the fact that there is not enough active AM stations to be a problem anyway.

Dan/W4NTI

1018. Help w/Swan 270

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-08-15 01:11:00 UTC
From: Chas <wg2a@frontiernet.net>
Message-ID: <ullvt6tapavvd0@corp.supernews.com>
Source record: 39546

I need the main tuning shaft assy. for a Swan 270 Cygnet. This is the piece that the main tuning knob attaches to and couples that to the dial. The one I have is very worn making tuning ssb tricky. Anyone have an old junker they want to piece out? Thanks!

Chuck WG2A

>Gil
I'm not familiar with the Sonar Radio Corp, but it sounds like a
low-pass filter to me. The model number (with the "LP" in it) would
lend credence to that theory. If you measure the resistance from
the center conductor to the shield and get 50 ohms it's probably a
dummy load. If you measure infinite resistance from the center
conductor to the shield, and measure a fairly low resistance between
the two center conductors, it's probably a low-pass filter. As far
as the cutoff frequency, you'll probably have to find someone with a
sweep generator to find that out.

1028. Help HRO info

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-08-15 09:17:35 UTC
From: "owen.home" <owen.home@ntlworld.com>
Message-ID: <KvK69.5543$IU4.217290@newsfep2-win.server.ntli.net>
Source record: 39551

Hello
I tried to ask for HRO information a couple of weeks ago but not a single reply!, my HRO is a rackmount with illuminated S meter, crystal filter and 456Kc/s IF but the chassis seems to be a Navy one and the detector is an octal 6F8 whereas the rest are the usual 6C6/6D6 types, there is also a metal 6J5 and preset pot added on what looks like a factory fitted plate at the front left hand side where the antenna input connectors would normally be - this is run to the back of the chassis. Other differences are a mute relay under the chassis and a preset pot on the front panel where the pilot lamp normally sits which is properly labelled "Monitor" - I suspect this is associated with an additional connector pair on the rear panel.
All the differences look factory or very well done, I'm in need of a circuit diagram or any information to tell me what model this is - did the Navy have 456Kc/s IF versions as well as the RAS type?
Many Thanks
John
N. Wales

From: n2ey@aol.com
Message-ID: <20020815083622.04751.00000024@mb-mw.aol.com>
Source record: 39554

Folks,

First let me say that I'm against any proposal that would outlaw any mode currently used by hams.

From what I have read, the purpose of the BoD idea is NOT to eliminate AM. Rather, it is to clean up a mess of old regulations concerning digital modes.

Under the present HF amateur rules, modes are defined as "CW", "data", "voice", or "image". In addition, there are limitations on things like the "symbol rate" of a data signal.

Back when "data" meant "FSK RTTY" and "voice" meant "AM, FM or SSB". this made sense. But in today's world it is hampering the ARS. Consider the following:

- If you want to use digital voice on the HF amateur bands, you have to do it in the voice/image subbands, regardless of the bandwidth occupied. Yet you can run 850-shift FSK Baudot RTTY in the CW/data subbands. Even if you can figure out a way to send digital voice in less bandwidth than the 850-shift FSK Baudot RTTY, you have to use the voice bands for digital voice.

- If you work out a way to send digital data faster than a certain symbol rate (300 baud?) you can't use it on amateur HF, no matter what the occupied bandwidth of the signal. We can have PSK31 signals using 50 wpm, but not "PSK310" signals using 500 wpm - exceeds the allowed symbol rate. But we can send 'images' using much wider bandwidths.

- How about a new mode where the voice channel is AM and the carrier is phase-shifted RTTY like PSK-31, so you can have simultaneous data and voice using BA gear for most of the functions? Not allowed on amateur HF under current rules.

It makes more sense nowadays to divide the bands into "narrow" and "wide". The important thing is that "wide" must mean "wide enough for AM".

OK, slashing price on this to the "disposal level."
Next step will be to send it to the dreaded eBray.
At this low price you can't afford NOT to buy it!

CLASSIC 1940s-50s Differential 'T' ANTENNA TUNER
Large roller inductor type with turns counter.

Heavy duty large components Two variable capacitors,
looks like it would handle a kilowatt with ease.

The versatile circuit is configurable for either series or
parallel 'T' configuration. Has jumpers in front to change
set-up easily.

Has built-in SWR bridge featuring an E.F. Johnson meter with
controls for FWD, REV and gain.
Case is metal with hammertone gray finish,
and has a removable lid.

Final reduction to $75.00 plus shipping

E-mail me to purchase

Here is a repost that I made to the SAMRC:

>Here is a little info on the people behind this proposal.
>
>The motion was introduced by Mr. Tom Frenaye K1KI. He is the former ARRL Vice
>President and now back to his old post of Director (New England Division). It
>is my understanding that in 1998 Tom Frenaye was the point man for the removal
>of the 144.4 AM calling frequecy in favor of APRS.
>
>The story goes that in 98 a consolidated effort of TAPR, AMSAT, and a
>consortium of APRS promoters wanted 144.39 for APRS. This came with approval
>of the ARRL board. An amateur working on some 2 meter AM equipment contacted
>the ARRL about that. The League Headquarters recommended that he contact Tom
>Frenaye, K1KI, at K1KI@ARRL.org for specific details of the board's action.
>
>Just a little history I dug up on K1KI.

Now, I'm not saying that there is anything wrong with Tom Frenaye, I'm sure
he's a fine person. And maybe this motion is no big deal but I would keep an
eye on it never the less.

As a novice in 1956 I built my first xmtr. It had a 6AG7 built on a board. I think it was in "How TO Become a Radio Amateur" but I am not sure.

I still have my original Hallicrafters S-20R receiver and want to re-create the xmtr.

I have several 6AG7 circuits but only need a copy of the article that showed the xmtr built on a board. The coil was wound around a circle of finish nails driven in the board in about a 3 inch circle.

Tnx in advance.

This identical xmtr also appears in the 1950-52 Radio Amateur's Handbook. I built one too, back in 1954. I'd run you a copy, but my library is all packed for a cross-country move. Perhaps someone else can copy the handbook article for you. Good luck!

I've got the 53 Handbook with a one-tube 6AG7 rig but it uses a 'real'
coil. Must have been an upgrade.
Let me know if you can use a copy.

The '53 Handbook has a newer version of that xmtr. The original, with coils wound on nails and tied off, was last pictured in the '52 Handbook, I believe.

From: Nico van Dongen <nico.vandongen@compaq.com>
Message-ID: <UE679.3$Kf2.404626@news.cpqcorp.net>
Source record: 39580

I have a Racal MA168-B Diversity switch unit for sale or trade.

The unit is complete and in good condition and powers up (input indicator light up) but since I don't have a Racal RA17 I can't test it. Should you know how to test this unit using one RA17 I can do that with the RA17 I can borrow of a friend.

Price will reflect the condition of "sold as is" but I prefer to swap for British military manpack gear or accessories.

By the way, I also have a spare Racal 100Watt amp for the Squadcal / Syncal series of manpacks available for trade.

Any offer considered

Hi Gang,
Bought a bunch of TS-174's (various letter designations)
in an auction yesterday and was wondering if they
are of any use to folks here. They were on a pallet
full of boatanchors. Had to buy the whole pile to get
the one item I wanted (auctioneers trick to get rid
of the junk....).

Can anyone tell me what they are? Won't be able to pick
them up until next week, so I can't even look at them.

I have 4 of the 4-250A tubes with Johnson ceramic sockets in excellent
shape.
would like to either sell them or trade them for some thing i could use.
Here are some of the things i am looking for. HB a GU-84B amp
Such as a 6 pos heavy duty band switch at least 3kw rated
A 400 volt or alittle above is fine, transformer say a couple of amps
a 0 centered min 140 volt dc meter -+
Need 2 air variables around 850 and the other around 1250
Gonna have to come up with some stuff for the tank circuit looking for
something heavy duty for it.
I have all sorts of stuff laying around to trade on if your looking for
something specfic i will look.

I also have the '53 Handbook, and see the 6AG7 rig with a factory coil (B&W 3016 with 13 turns cut from each end). Now I also have a 1950 print of "How to Become a Radio Amateur" and it does show a one tube transmitter with a hand wound coil. But the tube is a 6V6 and the coil is wound on sucker sticks, not finishing nails. Could this maybe be what you are looking for?

1071. $1,500 reserve for an SX-42?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-08-17 09:32:14 UTC
From: fe2au@rock.com
Message-ID: <9b1a10d1.0208170132.71a8b9a9@posting.google.com>
Source record: 39592

There is an SX-42 at eBay right now with a reserve of $1,500.

huh??? ! That has to me a mistake!
If it was a rare SX-88 that might be more reasonable but $1,500
for an SX-42? That model isn't that rare is it?

In my HUMBLE opinion if by some weird chance it does sell for that much
it is going to skew the value of ALL boatanchors toward profits for collectors
and thereby ruining it for the hobbyists.

This is a crazy world we live in. :\

Source record: 39499

Looks like the reserve has been met!

Seller DOES say it's restored so it would fetch a higher price. I should've held onto mine even with the cracked bandswitch wafer!

Darn, I just threw out a whole case of NOS bandswitch wafers for the
SX-42 cuz I figgered nobody wanted them anymore.
:-) Just kidding.
But really, when I had my old Hammarlund HX-50A in the early 70s I
figgered the 160 option would be nice to have. The local surplus dealer
in Charlotte had tons of the old Mars Hill inventory and I found all the
original coils (in boxes of 100), the right crystals, etc.
If I only knew then....

1080. Need: Label off bottom of Hallicrafters S-85

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-08-17 21:41:22 UTC
From: msenecal1@juno.com
Message-ID: <62bf14a6.0208171341.65a26591@posting.google.com>
Source record: 39501
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Does anyone have a scan/copy of the label off the bottom of a Hallicrafters S-85? I'm restoring one right now, and I can see where the label was (looks like it was riveted in place), but I don't know what it looked like. BTW, this isn't the one that shows where the tubes go -- that's on the inside of the chassis lid. It's some other label. Can anyone help?

Thanks,

Matt

The ARRL will do whatever it feels it neds to do to sell more magazines, insurance policies and coffee mugs. It has nothing to do with anything other than posturing amateur radio in a way that will increase their revenue. If this means culling the bands of AM (and indeed their even worse arch enemy ...CW) they'll do it.
I unwrapped myself from the league flag a long time ago. I see no need to support an organization that no longer represents my interests.

In my equally humble opinion, it is going to seriously skew my priorities as to which of my two dozen BAs and old radios I restore first!

Well, actually, I was going to tackle my SX-42 soon anyway, but thought I'd warm up on the SX-36 first (both get FM). The SX-42 is a really fine set with FM, some VHF, and hi-fi audio. I also have the matching Darth Vader speaker.

Never mind the three almost-working SX-28s that my widow will let you haul away free someday :-) --Mike K. AA1UK

Here's another candidate:

QST for May and June, 1951, carried a two-part article on "The Novice One Tuber", by W1TS. This rig used a 6AG7 on a board, with a separate power supply. Had pi-net output, a dial lamp plate current indicator, and ran about 12 watts input. Used a Miniductor coil, tho. Articles give total price of all parts in 1951!

Icom 720A HF Transceiver. Great radio, transmits perfectly and can be modified for MARS/CAP operation. Another Ham just did the maintenance and adjustments on it. Comes with IC-HM7 Mic, power cord and maintenance manual.

$310 plus shipping. Shipping should be about $25 to anywhere in the continental US. I accept PayPal or just a Visa/MC is fine.

If you have replacement slugs, this *might* work.
I have not done it, so proceed at your own risk.
Put a SMALL drop of Crazy glue on the end of the
allen wrench. CAREFULLY put it into the slug so that
no glue gets on the inside of the coil form and
hold it there until it sets. Once the glue sets,
unscrew the slug. Bust it off the allen wrench
and sand any remainder of it and the glue off the
wrench. Good luck!

Check the filter caps. Also, if the xformer is ok, and
if the amp does not have a step start circuit, add one.
Consider replacing all the diodes if you are going to
get this running again.
Some HV xformers, like those in many microwave ovens,
intentionally ground 1 secondary terminal. Don't know if
that applies to yours or not.

Tnx for all the replies and help guys. Looks like it stirred up a lot
of memories. Ron W9EOA has sent me the 6AG7 built on board article
but it has factory coil. He also sent a 6V6 article built on board
with coil wound in circle like I remember but using sucker sticks
instead of finish nails. Maybe
I used finish nails instead of non-metallic sticks---anyone remember
for sure the use of nails?????? Anyway tnx a bunch Ron.

I know I used 6AG7 and nails---maybe I kinda merged the 2 circuits.

I will definitely build it when research is done.

Anyone else with info please post or email me.

Tnx agn to all

Im thinking about just auctioning it off here on this newsgroup. I know approximately
what its worth because of its condition. Its not mint but its a nice one and works
great. One of the reasons I want to sell it here is that my pics are 1.3 megs and I dont
think ebay will accept them that large. Ive never used ebay.
Ive seen these sell for over $1500 and a NIB jusr sold for around $5000. This one
Ive had for over 20 years and used it for about 7 years total. There are some other big
toys Id rather play with right now.
Id post the pics here but there pretty big and I dont know if binaries should be posted here.

If you know what it's worth, and/or what you want to get for it, then this
newsgroup is the better place.

eBay may fetch a higher price, but you'll be dealing with less-known people.

Of course you can put it on eBay and advertize it here, like so many folks do,
but if you know what you want for it, just this group would be easier and
nicer. 73, Mike K. AA1UK

I have a storage locker in Seattle I'm trying to clear out so I don't have to fork over rent for it every month (a consequence of leaving that city and moving into smaller living quarters). I'm more concerned about finding a good home for the following radios than making a killing out of selling them; in fact, I'm willing to give them away to anyone who's willing to come pick them up.

I'd prefer making arrangements to pick things up at the storage facility in Seattle, but my place in Portland might also work. Sorry, shipping is NOT available -- don't even bother asking.

What's available (unless mentioned otherwise, sets have not been restored and are unknown working condition):

AN/GRC-9 military field radio, complete with hand generator and 12/24 volt dynamotor. Works, 'C' battery needs replacing, as does vibrator in dynamotor supply.

Bogen MU130 PA amplifier.

Heath AJ31 FM tuner.

R390A military receiver. Powers up, but only thing audible is white noise.

Hammarlund SP400X receiver, separate power supply not included.

Military loud speaker enclosure suitable for mounting in 19" rack.

19" rack (gray hammertone metal, no castors).

Does anyone remember the xmtr with a 6V6 built using a Ludens cough drop
can as the chassis? I think it was in "Electronics Illustrated" and it
was published around 1962 or 3. If not, I'm going crazy. :-)

Ok, i have a problem like this too, and would love to hear from a pro at
working on IF slugs that are frozen.

I am working on a heathkit Mohican SW reciever, and the slugs in the 455kc
IF section were frozen. Using a 1/8" metal allen wrench seems to have split
open the slug. Now what?

Is there a better way to unbind the slugs (part ease? / tuner cleaner lube)
and now where do i get some replacement slugs for the one i busted in the IF
output can. Has anyone solved this problem before?

Speaking of SX-115s. What is the story with these things? Why are
they selling for so much? Is it because they're the top of the
Hallicrafters' tube receiver pecking order?

I don't think they're better receivers than others of that vintage.
The Heathkit SB-300's had a stable VFO and crystal filters. The
Collins 75S-1 was even better overall. Even the HRO's, the NC-303,
Drake 2B, R series would give the SX-115 competition.

The SX-115 was certainly a better radio than the SX-110 or SX-101A
(which I still own) but compared to other boatanchors, it didn't stand
out as a must-have due to filters, front end, AGC, gain, audio, etc.

>I used finish nails instead of non-metallic sticks---anyone remember
>for sure the use of nails?????? Anyway tnx a bunch Ron.

The rig using a 6V6 and bell-wire coils first appeared in QST in December, 1946, under the title "The Most Inexpensive Transmitter". Although the article was written by W1DX, he gives all credit for the idea to R.O. Deck, jr, W9JVI.The 1946 cost of the rig was $3.95 if all parts except the crystal and tube are bought new. The original rig was meant to be powered by a communications receiver, using the receiver's audio output tube and power supply. Deck's original design used a metal chassis and the grid-plate circuit, while the QST/Handbook unit used the Tri-Tet circuit and a wood chassis.

The plate and link coils are wound basket-weave fashion using cotton-insulated bell wire. Q meter tests indicated Q in excess of 300. A single 50 foot coil of bell wire was sufficient to wind all the coils for the rig for both bands (80 and 40), and wire up the whole rig, including power cable.

The winding method was as follows: First, draw a 2 inch circle on a thin board. Next, drive seven 8 or 10 penny nails through the board, spacing them evenly around the circle. Secure on end of the wire to a nail, then wind the coil by weaving it alternately through the nails. Because there are an odd number of nails, alternate turns will be on opposite sides of each nail.

When the required number of turns are wound, the wire is cut and secured to a nail. The turns are then secured by tying with string in several places. The whole coil assembly is then slid off the nails, and another coil can be wound.

Wood dowels are used to hold the coils in the rig itself. The use of nails would reduce the Q, and the length needed to hold both the plate and link coils would require pretty hefty nails.

This is a very old technique - goes back to the early 1920s, at least. Distributed capacity and losses in such basket-weave coils are lower than similar coils wound single-layer on forms.

Parts list for the rig:

Xtals

1 - Tube (6V6, 6F6, 6K6 suitable).
2 - octal tube sockets
1 - 470 uuf mica
2 - .01 uf paper or disc
1 - 140 uuf variable.
1 - 100 K 1 watt carbon
1 - 2.5 mH RFC
1 - octal plug made from burned out tube
about 50 feet bell wire
Hardware and wood chassis (fahnestock clips, 6-32 screws & nuts, solder lugs, wood screws, wood)

>I know I used 6AG7 and nails---maybe I kinda merged the 2 circuits.
>I will definitely build it when research is done.

If I were going to build one today, I'd use the 6AG7, grid-plate circuit, pi-net output and basket-weave coils. Also a screen-dropping resistor and bypass capacitor if the supply voltage was over 300.

My first rig, way back in 1967, was based on this rig. I used a 6V6GT and the grid-plate circuit. Coils were wound on pill bottles. Still have the tube - maybe I will build one, too.

If the slug is in two pieces, maybe you can glue it back together.
It's just ferrite material and should work fine with a split in it.

For Sale:

Lincoln 6 Meter AM transceiver. A genuine 1961 classic!

The Lincoln 6 meter shoebox-sized transceiver was sold by
Allied Radio in Chicago as a "step-up" from the Heath "Sixer".
Here's your chance to own a rare "60's Classic" rig, and this
one's in absolutely beautiful condition throughout.

It's transmitter is crystal-controlled and plate modulated for
crisp and clean sounding audio, with a power input of 7 watts.
Receiver is a sensitive superhet, with a built-in noise eliminator
and AVC. An RF stage precedes the receiver's detector for
excellent sensitivity and selectivity, and to keep RF radiation
to a minimum. Covers the entire 6 meter band from 50.1 Mhz
to 54 Mhz. The Lincoln has a built-in A/C power supply, or it
can be operated using an external 12 Volt DC power supply
(not included). Complete with operation manual and schematic.

Add a crystal and a mike, and join in the 6 meter AM fun with
this sharp looking little rig. Price is $60 plus $15 for very well
packed, insured shipping (U.S. only).

If interested, please reply to shortwave@pghmail.com
for further information.

There was "The Littlest Transmitter" in CQ in 1963 (title and year
from memory, but I'm at least sure of the magazine!). That was
followed up by "The Littlest, Cheapest Transmitter" in 1964 or 1965
(same caveat). It was a glass 6L6 on a tiny chassis -- quite possibly
a Luden's can.

Probably a good bet they are copies. Also watch for the ones that have been downloaded from BAMA and are being sold on Ebay. There you pay good money for a avaerage scan quality that you could get without charge from BAMA.

Hi,

I'm just across the Columbia in Clark county and would like a project receiver
- willing to pay a reasonable price for either the R390A or the SP400X.

You could email me if either is still available.

tnx

Don

>> Here it will get bid "down".

Yep....I posted a nice one on here for $750 (very resonable) and got
DIDDLY - SQUAT for replies. I really hesitate to go to Epay
'cause I think it drives the prices for gear WAY UP. I don't know
how many times I have been in discussion with a seller and the
say something like "I have seen these sell on Ebay for ---$$$"....
Screw it, I would just keep the damn thing.......If I had not found
a buyer in ANOTHER forum......

I also agree with the post regarding the receiver's performance.
It's a pretty nice rx for CW and SSB, but forget about it for AM.
Even at that, there are other rxs out there that do just as well
for a lot less dough....Hammarlund for example......

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,alt.ham-radio.marketplace

For sale:

National Company of Malden, Mass.

Pi-wound QRO final amplifier choke as used in many rigs
of the tube era. There re 5 green 'piles' of windings.
Dimensions 3.5" tall X 2.5" X 2"

Has ceramic standoffs and 3-hole metal bracket for mounting it.

Will sell for $10.00 plus shipping

1165. Crystal Sockets (1)

Date: 2002-08-21 13:19:20 UTC
From: Sidevalve <Sabbatai_zvi@hotmail.com>
Message-ID: <ea47mu8onmlc8jvbmn1d7l9h9qg1vdkrg5@4ax.com>
Source record: 39438
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.swap,rec.radio.amateur.equipment

FOR SALE:

Crystal sockets for HC-6/U crystals.
If anyone would like some, I have about 10 or 20 of these available
for $2.00
each plus shipping

These are new parts. They are teflon and anodized metal.
They have two hole side mounting, with a clip that nicely holds the
crystal in place.

Great for repairing older rigs, or for homebrewing tube transmitters &
receivers.

These are NOT the same as FT243. These are for the similar sized
crystals that have thinner pins.

1166. Need Yaesu FT-101 Part

I need a Motorola MFC-6034A integrated circuit. It looks like some type of voltage regulator or operational amplifier. It is used to provide a very stable, regulated 6.0Vdc on the FT-101E/B REG AND CALIB card PB-1314. I checked with Yaesu parts in California and they show it as "Part Discontinued". There is a company in upstate New York that has them but costs min $100.00 U.S. funds. Add the foreign exchange and a plague of taxes and fees and this becomes an expensive proposition. If someone has the part in their junk box, please contact me. Otherwise:

1) Someone check the old Motorola cross reference libraries from the 70's and 80's and see if there is a substitute.

2) Sell me a FT-101 as junk.

3) Sell me the PB-1314 REG and CALIB card. (Any Version)

I live in Eastern Ontario.

Thanks
John

I have an orphan Viking 6n2 transmitter sitting on my shelf that I am willing to trade for something of more interest to me. The unit is in good shape, the usual scratches on the cabinet. The front panel is in good shape. It comes with an original manual.

I am not looking for anything special in trade, so it would be whatever tempted me most. Also, I have no idea of value of this unit so would have difficulty in responding to purchase offers.

I can take picrurees of the unit if anyone is interested.

Thanks.

Jim

TERMINAL BOARDS
New first quality terminal boards.

For those who build, repair or service antique amateur
radio equipment and/or audio equipment etc.
the following will be very useful.

Top quality fiberglass and phenolic terminal boards
in several sizes.
These have 2 rows of turrets for mounting components
and making wiring connections, and four mounting holes in the corners.

A) Measuring 8-3/4" X 1-5/8" with 21 pairs of terminals for mounting
parts etc.
QTY 3 available at $4.00 each.

B) Measuring 2-5/8" X 1-1/2" with 5 pairs of terminals for mounting
parts etc.
QTY 10 available at $1.50 each.

C) Measuring 2-1/2" X 2" with 5 pairs of terminals for mounting
parts etc.
QTY 1 available $1.50

D) Measuring 2-5/8" X 2-1/2" with 5 pairs of terminals for mounting
parts etc.
QTY 3 available at $1.50 each

E) Measuring 2-5/8" X 3" with 5 pairs of terminals for mounting
parts etc.
QTY 1 available $1.50

E-mail me to arrange purchase

Who else made these under contract? Mine is not nearby but I know
it's not by Halli. Great-sounding thing, it is. Looks like his could
easily have the rotary sw swapped back to the jack, doesn't look
chopped at all.

Because at any given time there's only a couple of guys reading the
newsgroup that would want to buy an SX-115 unless it was a real
giveaway. We are a stingy bunch, ya know.
Thats not a condemnation of the radio or the group. Its just that ebay
has a much bigger audience.

G'Day John
You could send an email to Dick Smith Electronics (VK
Yaesu Distributors)
at spares@dse.com.au give them the details and
ask for a quote.

They had stocks of a hard to get Balanced PreMixer SN76514 IC for the
FRG7 receiver. It cost about $15US. Not cheap but they had them.

Lets know how you go as I have an FT101E, Hi. If they won't supply
international customers
lets know and I will get the IC for you (if available)

Perhaps the lack of information regarding my question is the answer in itself.

I am about to ship an old National tube rig (60's vintage) via UPS. Is it OK to leave the tubes installed assuming I provide double boxes and styrofoam packing? I usually deal in transistor QRP rigs so have no experience with the venerable tube-based stuff. I know its generally rugged stuff but was wondering if I should take special precautions anyway.

I have always shipped old National tube radios WITH TUBES REMOVED, separately wrapped with wrapping indicating which socket to put them back into. Tuning capacitors fully meshed, interior stuffed solid with packing material and tubes, where easily done, packed in the interior cavity. I wrap the radio with wrapping paper and tape it so the lid can't come open. DO NOT apply tape to the rig itself. There's no telling what it'll do to the finish. Put a BIG note on the rig warning the buyer NOT TO PLUG IT IN until tubes have been replaced.

DO NOT use peanuts or styrofoam to stuff the interior. It is a real job to get all the residue out. If you are going to use styrofoam of any sort in the packing, even blocks of it, make sure the radio is wrapped well in a plastic sack and taped shut. A couple of garbage bags will work. Make sure that the front of the radio has extra padding on it with good protection around all shafts so if there is any pressure on the box the shafts aren't touched. Use heavy cardboard if necessary to build a structure on the front to protect it and provide extra spacing. If you are extra concerned, remove the glass scales, wrap and pad them separately and maybe even ship them in a separate double or triple box.

Always use at least DOUBLE BOXING of the rig with HEAVY boxes and not the typical light weight boxes you find in most dumpster diving. Computer boxes cut down to what you need, Stereo/TV store boxes sometimes work well and are extra heavy. IF you dare use PEANUTS (no-no to some people) put them in plastic bags and compress them so they are as near blocks of compressed styrofoam as you can possibly get. Don't pour them in loose and assume they'll stay where they were put.

Even UPS hasn't been able to destroy any radios (and even an oscilloscope) that I've shipped that way and lately I've found that FEDEX is much gentler on the package than UPS. Of course if either decides to run a forklift prong through the box or run over it with an 18 wheeled vehicle all bets are off.

Don't ASSUME anything about packing except that it'll take a couple of hours to do an adequate job and you must pack it to survive a drop of 6 or 8 feet to a concrete floor hitting on the corner of the box.

If you have something like an amplifier or a heavy power supply seriously consider removing the power transformer and if applicable, choke and boxing and shipping separately. It's amazing what a bit of movement and acceleration to a package can cause those items to do when the package suddenly stops and they keep going.

DO ALL YOU CAN TO PROTECT OUR OLD BABIES!!!!

Most people using the Net don't even know these newsgroups exist!
And there are a lot of hams who rarely get to a hamfest.
Ebay has a huge audience- add to that the psychology of bidding.

The best alternatives to Ebay are www.eham.net and www.qth.com

It could have been CQ, but I would have had to borrow it from someone.
This was back in the days when ham radio was fun and kids like me had big
dreams. This was a really neat project and was very imaginative. It
would have been alot of fun pounding out a CQ in a cold shack in the
middle of the night and having someone answer you when your only light was
from the filaments of the 6V6 and your R100A receiver. Oh! I guess I left
out the light from the 5Y3 in the high voltage power supply. :-)

Happy Trails,
Steve WB4CZR

P.S. I've been an ex IC designer recently, but I was born and raised on
fire bottles (aka 807's or hollow state devices)

1210. Does anyone do repairs on old Military Surplus radios?

Hi to all,
Anyone got any service info on a Gonset G-63? Anything will work.

Thanks to everyone who helped me with the Henry problem.

Paul,

I make my living as an airline captain and for a number of years was
required to commute from my home in the Great Lakes region to the East Coast
for work. As airline pilots often do, I used other carriers, including the
freighters (UPS, FedEx and Emery and Ryan who handle the post office air
transportation).
Typically it runs like this: I finish my trip schedule and bonzai to
the out station of one of the freight companies and put in a request to
ride. I then fly with the crew...usually departing at 8-10 PM to its sort
hub...where I wait for 3-4 hours to catch the next leg to the city I really
want to end up in. During this wait period at the sort hub I saw everything
from large boxes being slam dunked into cargo containers to "free throw"
style shooting of a parcel across a 50 foot area of the sort to land in a
sort bin. Remember this when you pack.
Also remember that the freight companies require packages to be packed
in such a way that they can withstand a fall to concrete of 16 inches
(roughly the distance from the loading conveyer to the floor)...and I saw
this happen often.
When you are packing a boatanchor ask yourself "Can this package and
its contents survive a fall of 16 inches to a concrete floor? If you don't
think it can, you'd better repack because that is what it will probably get.
Finally (and this is subjective and not scientific at all) I saw
packages handled FAR BETTER at the FedEx sort facilities THAN ANY OF THE
OTHER ONES.
Good luck.

....was my first good SW radio, about 35 years ago. I had the matching speaker and MW stations sounded oh-so-good!

Now, as a companion to my DX-60 transmitter, it was decent, too, but I had to put a separate filament transformer in it to run the oscillator tube 24hours a day, just so it would stay reasonably close to the frequency I set it to.

Ahh....a fine old set!

On my schematic for the 533A I only see one resistor in conjunction with the line adjust switch, and it is 180K. You might give the BAMA site a try. They have a manual for a 532 and 534 listed and they should be almost identical to your 533. Good luck. If you get desperate, I could possibly be persuaded to lift the top on mine and look around inside it for you. Just let me know. 73,

Much paperwork for most Hickok tube testers available for download:

http://www.hickoktubetesters.com/index.html

The last 4/5 pages of the 533 owners manual were all schematics. I saw one labeled as 533A. I believe Hickok tube testers have a fair amount of circuit variation even within the same model number.

<< Would I be able to replace
the cap with the 22 MFD 160V cap...? >>

Yes. That is the cathode bypass. The audio output change from 10 to 22 Mfd will probably not be anything that can be heard - a very slight increase in bass gain.

Don

22 will give you more base, something you may or may not want. I seem to have quite a few of the 22 ufd as well. How about putting them in series to get a 10? That's what I do with my BA's is series and parallel to get the capacity and voltage rating I need. I mount them on some perfboard and standoffs under chassis to get a finished appearance. Easy to swap later too.

Tony

I concur with Cpt. Weiss. What he saw IS the way it is. I'll also concur that FedEx gets it there is one piece far more often than "Universally Poor Service". Finally, the FedEx driver was here today delivering another PP-4763. They're HEAVY, as I'm sure many of you know. It made it here (as did 3 others) in fine shape, albeit they were packed properly. In conversation with the driver, I commented that they (FedEx) were probably safer than the competition. He thanked me for the compliment but stated that they too were capable of banging stuff around. He mentioned that at his local terminal they have a couple of nice ladies of fairly diminutive stature and, given a box of considerable weight coming down the conveyor, they "only are capable of doing what they can", meaning it gets dumped on the floor. My money still goes to folks at Memphis.....

For sale or trade for an upscale general coverage receiver. Now for the details... I have a visiting PY here in my home for a few weeks. He brought his S-Line rig up to see if he can either sell it and buy or trade it directly "good" general coverage receiver, preferably military. Now for the details... they're not in good condition... at all!!. They worked before he moved and put them in storage about 6 years ago (I had weekly sceds with him up til then), apparently in a place not suitable for such. As a result, they have got corrosion on all top surfaces and rust on the transformers. The cabinets, although not corroded, will require a re-paint. The front panels have a bit of scuffing under a couple of knobs and will require touch-up and clean up. No doubt every pot, control, switch, and mechanical part switch will need de-oxing, etc. The units are complete, however, and the receiver has one filter installed. I would probably prefer that anyone interested in the above units inspect them before considering buying/trading; I'd hate to have anyone think they were misled and/or disappointed.
Finally, he did not bring the 516F-2 nor the 312B-4, so the basic units are what's here.
Thanks for the read. de K3HVG

Source record: 39270

Hi Gang, I have a CX-1211/U Power Cable (DogBone) Assembly
Dimensions: 3,5 inch. Weight: 0,225 kg.
Up for auction on eBay.

This cable connects between PP-112/GRC (24 Volt)
or PP-109/GRC (12 Volt) and
RT-66/GRC or RT-67/GRC or RT-68/GRC.
Part of GRC-3, GRC-4, GRC-5, GRC-6, GRC-7, GRC-8, VRC-8, VRC-9,
VRC-10,
VRC-13, VRC-14, VRC-15, VRC-16, VRC-17, VRC-18, VRQ-1, VRQ-2, VRQ-3.

Use this URL o view this and other
vintage radios parts I have listed.

http://cgi6.ebay.com/aw-cgi/eBayISAPI.dll?ViewSellersOtherItems&userid=kc4yoy&completed=0&
sort=3&since=-1&include=0&page=1&rows=25

If anyone has them I would be VERY interested
in aquiring 2 of the connectors that are use on the
DogBone cable for the RT-70/AM-65.
I would perfer loose connectors instead of having to
kill a good DogBone cable.

I was interested in boatanchors back in the 70's -- owned a Hammarlund SP-600JX, a Collins 51-J4, and some other goodies. Over the years I drifted off to other things and sold the radios, but now I've found this newsgroup and seem to be getting the bug again. My question concerns tubes. Does anyone still produce new tubes (at least the more common ones), or is everyone just passing around the old ones until they all burn out? Just curious, as I'm not really eager to acquire a vintage radio just to see it become a large doorstop :-)

How difficult is it to keep these radios running these days?

TIA,

Mike

Source record: 39273

Mike:

Welcome back!

There are gobs of good tubes around. Remember that the world ran on tubes for decades so they are stashed everywhere. Even new tubes. I see several companies that specialize in tube selling new 5 tube sleeves (NOS) New Old Stock. Not to worry about tubes mike. One difference... tubes are no longer $1.75 for a new 6BE6. But, given inflation etc in the last 40 years, the price will be reasonable. Many sell "pulls" not tested for $1.00 or sometimes less. This is one of the reasons you need a good tube tester. I bought 10 tubes I needed about a month ago at a hamfest and 8 of the ten tested good.

So,DO get yourself a GOOD tube checker if you do not already have one. I invested in a Hickok Cardmatic 123R. Other candidates would the Hickok 800A or if you can afford it the539C, considered the "engineers" tube tester. Anyway, you WILL need a way to test tubes.

Dive in, the water is great.

Cheers,

AL

Hi Mike-
From what I see there is still a pretty good supply of tubes. Only the more common transmitting and audio tubes are still being produced new. Many of the manufacturers are overseas and sometimes the quality is not as good as we were used to. Either way, there are still a bunch of New-Old stock American tubes to be found. I personally have about 3 to 5 sets of extra tubes for all of my boatanchor gear- Probably enough to last a lifetime. The way I see it, I will still be able to keep these boatanchors going decades from now, but forget trying to find a microprocessor for a newer Kenwood rig many years from now. Whats cool about Boatanchors is that you can always retrofit a similar part in, substitute different tubes, make solid state plug ins, etc. Somehow I just dont see that happening with modern microprocessors, LCD displays, and other specialized parts. Go grab an old boatanchor rig and dont sweat finding parts. With the internet you can get plenty of technical assistance from other BA enthusiasts, and track down many of the needed parts to keep these old gems on the air.
Good Luck & 73
Jim W3ATV

1257. FS: Tube type power supply trainer unit

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-08-24 20:02:46 UTC
From: WKW <worley45@aol.com>
Message-ID: <3D67E666.7C692AA0@aol.com>
Source record: 39280
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors

I have several old Army surplus custom made tube- type training power supplies. These contain several useful parts (including the case) for making a 50 or 100 W RF amp or transmitter out of. Total size is 19" W x 15" D (counting the 3" handles on the front) and 8" H. The front has two nice large 4" x 4-1/2" rectangular Simpson panel meters, a 500 V and a 300 mA. Also has a 3-pos rotary sw and 3 pots, all with nice black knobs, and a fuse holder & rocker power switch. Inside is a big plate/filament transformer with the following spec: Stancor P-8352 with the following ratings: Pri 117 VAC, SEC: 290-0-290 (580 VCT) @ 240 mA DC, 5 V @ 3 A and 12.6 VCT @ 5.25 A. There are 4 tubes in the unit: 5V3 Full Wave rect, 6AS7G large octal power reg, 6136 mini 7-pin and a 5651 87V gas VR tube. Also has a 20 uF / 500 V dual section twist lock capacitor, and some power resistors and other parts. There is no top or bottom cover, but I can supply a piece of 1/16" aluminum to fit. I traced one of the units out before and drew some rough schematics, but never got around to drawing a good on out. Asking $30 plus UPS (36330 zip, total wt appr 28 lbs). Also have units missing tubes or other parts (several have broken meters) which I will knock $5 or $10 off. I can email you two photos. Email or call 334-347-5281 day/eve.

I believe it. Some of those manufacturers have a tough time making a
decent lightbulb, let alone a tube. Good to hear that a supply still
exists, and I had almost forgotten about substituting tubes. Sort of
makes me yearn for the old days of b&w television, when you could
actually get inside and fiddle with stuff -- provided you had a
"cheater" cord, that is :-)

Are these by any chance the Allen-Bradley military connectors made in the UK?
They start with ABM numbers?

If so, I am also looking for a source... I know they were made in the mid
nineties but I can't find where.

>radio just to see it become a large doorstop :-)

Depends what you need. If you need standard audio and transmitter tubes,
or the tubes for an AA5 table radio, they are all in current production
and readily available.

If you need TV tubes or tubes designed for particular consumer applications,
they are basically a glut on the market. Haven't been in production for
years, but there are warehouses full of them that nobody can get rid of.

There are some tubes that have become rara avis, like TV sweep tubes, which
were used in some cheap ham transmitters for cost savings and which have
basically been eaten up by users in the last couple decades.

So, before you buy something, find out what tubes it takes, and what is
available. Stuff like the 51-J is no problem at all to get replacement
tubes for.

>How difficult is it to keep these radios running these days?

Easier than it was when they were new, usually.

Mike, I don`t think there is much concern about tubes,there is enough new tubes out there to last another 50 years ..I usually stock up a complete set for any boatanchor that I intend to keep for myself.Some components might be hard to find ,pick up and old rough unit and stash it away for spare parts, like IF coils ,BFO coils etc..thats part of the fun, keeping them working..hi ...good luck Harold W4PQW

I received this request via email and passing it along here in the hopes that someone may be able to assist this gentleman.

A friend of mine, President of the Radio Club Argentino (Argentine Radioamateurs' Club), owns a Stromberg Carlson Service Buzzer, model 1912, that had been used by the US Army Signal Corps during World War I.

Although the gear is in very good condition, we want to refurbish it and to "put it back in service".

To do so, we request your help in terms of getting the operation manual, brochure, circuit technical specifications, etc.

If this material is not available at your end, please be so kind to give me any clue you consider could help to start my search.

I appreciate your support and time.

Sincerely,

Ernesto Syriani

1289. Using BA TX as linear?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-08-25 09:00:25 UTC
From: n2cqr@clix.pt
Message-ID: <3d689c74.557884440@news.clix.pt>
Source record: 39312

I recently built a solid state 17 meter SSB transmitter and have been having a lot of fun with it. (Details on my web site -- URL below). The only problem is that the 5 watt output sometimes makes copy tough for my 17 meter friends. They are threatening to take up a collection to buy me a linear.

I tried using a little Ramsey kit 20 watt MOSFET-based linear. Those MOSFETS are too sensitive!

So... I've come to my senses and am looking at alternatives that glow in the dark.
After building the transmitter, I don't want to immediately launch into another HB project. This morning I was sitting in the shack. I was looking at the old HT-37 that has been JUST SITTING THERE for a long time. Two nice 6146s in there, already wired for linear service. Power supply already built. You guys see where I'm going.

How about me running the 5 watts of RF out of the HB 17 meter SSB rig into the PA section of the old HT-37?

Any suggestions on how to do this? I'm looking for ideas that don't involve major surgery on my beloved Hallicrafters TX.

Should I run the RF stright to the 6146s? Or should I make use of the 12BY7A driver? How much drive will I need for the 6146s?

Do you guys think I will have to change the values of the coils in the PA tank and/or the driver plate circuit? Or will I be able to tune 17 with the bandswitch in the 20 or 15 meter positions.

Suggestions welcomed. Thanks,

73 de Bill CU2JL N2CQR

Just a few left, guys...

TERMINAL BOARDS
New first quality terminal boards.

For those who build, repair or service antique
radio equipment and/or audio equipment etc.
the following will be very useful.

Top quality fiberglass and phenolic terminal boards
in several sizes.
These have 2 rows of turrets for mounting components
and making wiring connections, and four mounting holes in the corners.

A) Measuring 2-1/2" X 2" with 5 pairs of terminals for mounting
parts etc.
QTY 1 available $1.50

B) Measuring 2-5/8" X 2-1/2" with 5 pairs of terminals for mounting
parts etc.
QTY 3 available at $1.50 each

C) Measuring 2-5/8" X 3" with 5 pairs of terminals for mounting
parts etc.
QTY 1 available $1.50

E-mail me to arrange purchase

US production of receiving and small transmitting tubes is almost zero. But there are so many tubes out there that most types are readily available, unless they are particularly rare or have been snatched up by the audiophile folks.

Here's quick test for the availability of a given tube type:

Go to eBay and search on the tube number. Don't bother with the active items - instead, look at the completed auctions. Note how many auctions for the tube type there were in the past 30 days, and how much they went for. Note also how many tubes went beging, with no bidders. eBay prices tend to be top-dollar - you can probably do much better. But you'll have a rough idea of how available a particular tube is.

Also consider inflation when comparing prices.

>How difficult is it to keep these radios running these days?

Not hard if you have the time, patience and some tools and test equipment.

Paradoxically, the 'net has made it much easier to keep old sets going. Parts and info are everywhere on the 'net. Manuals and other info are often freely downloadable. (check out the BAMA site for an example)

Many years ao I painstakingly traced out every wire in a BC-453 so I would have a schematic. Today the entire manual on the entire ARC-5 series is available free for the download time.

I also concur. Not too long ago I had a "large" plate transformer shipped in via Fedex. About 140 pounds of it! The seller had crated it well, so damage was not an issue, but Fedex was cheaper AND they asked me where I wanted it when they came. Told them down in the basement and they did it with no bitching... Great service!

1293. National Boatanchor ID Help Please

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-08-25 13:02:08 UTC
From: jmpalm@mindspring.com
Message-ID: <akajan$iu1$1@slb7.atl.mindspring.net>
Source record: 39315

Fellow colledtor led me to an estate sale and a National 10-tube receiver.
5 Bands (no BC except 1.3Khz plus at bottom one band. General Coverage.
S-meter, BFO, has a cool rack-and-pinion bandswitch that slides a 6" x 6" x
2" block of coils etc along the bottom of
the radio. 100% original under the hood and still works. Filter Caps OK
but draws 800 mA in the receive mode. Plate volts 300+ . Power Xfmr seems to
run a bit hot for such a massive piece of gear. Any ID help appreciated.
Nameplate missing from front, but I think it may still be at the source.

Source record: 39319
Cross-posted to: alt.ham-radio.hf,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

Hallo!

One of my friends owns an old "Atlas 210x". Now he wants to use it as his "digital modes Transceiver" because the receivers spectrum is very linear. But it has a terrible frequency drift problem.
Now he remembered that there is a connector for an external VFO at his radio's rear. His idea is that there must be a way to stabilize the radio on the frequency - for example 14.070 for PSK31. May be with a little circuit using crystals, etc...

Do you have any ideas about how to do this? Schematics? Or something that may help him...

Thank you very much!

For Sale:

115V primary 60 cps. Sec 6.3V CT at 6 Amps, 1.5KV test.
NEW TRIAD F-18X. Horizontal channel mounting.
Dimensions 4" X 3" X 2-5/8" tall
QTY 1 available for $12.00

115V primary to 5 V AC at 20 A Avco Crosley (no CT)
Black case potted with four mounting studs. Ceramic insulated
terminals on the bottom.
Dimensions are 4" X 3-1/4" X 5" tall.
QTY 1 available for $32.00

115V Primary / 10 V AC at 5 A secondary
QTY 2 Available at $15.00 each
(Use with tubes like 813, 830, 8005, 211, 311, 805, 810, 8000,
304TH, 304TL, 814, 828, 803)

115 / 230 V primary to 7.5 V CT at 51 A QTY 1 left at $95.00

115V primary to 1050V CT at 75mA plus 5V at 20 A
Under-rated military type capable of intermittent current peaks
around 150 mA or more.
Black case potted with four mounting studs. Above chassis mount
Ceramic insulated terminals on the bottom.
Dimensions are 4" X 3-1/4" X 5" tall. QTY 1 for $32.00

115V primary to 1100 V CT at 180 mA Potted style,
above chassis mount with 4 studs. Under-rated military type
capable of intermittent 300 mA or so.
Dimensions 4" X 5-1/4" X 6-1/2" tall. Ceramic insulated terminals
on top. Gray case Looks to be new. QTY 1 available for $30.00

Variable Transformer with 120V AC in gives 0-140V AC out.
Powerstat 0-140V "variac" rated for 5 Amps. Open frame style
Looks new. Comes with large black knob and dial scale.
2nd one is marked as 3A but actually larger!
Reduced - QTY 2 available for $35.00 each.

Also:
National 5 Henry autotransformer choke A17847 made by
National Radio Co.
Q = 10 at 100 Hz, 1mA DC. Has taps at 2%, 40%, 95%, 100% and
105%
Dimensions 2.5" tall X 1.5" square. Potted. Mounts above chassis
with four nuts on studs (supplied) QTY 1 available for $2.00

Shipping additional on all items

I bought one from that guy too. It is as good (or maybe even better)
quality than the original, that is, if it is indeed a copy.

I've heard rumors that some OEM's are sending out some pretty shoddy
copies of their own service manuals.

I have four pcs of the very nice Siemens F2a power pentode for sale.
They are NOS and in original boxes. Picture and technical data on my
web site - www.demostenes.no Just search for F2a in the left hand
corner.

Regards,

Arnold Goks�yr

DEMOSTENES - N6899 Balestrand, Norway
Tlf. +47 5769 1340 Fax +47 5769 1267
http://www.demostenes.no

Thousands of different valves in stock as well as
sockets,transformers,books,caps,resistors and
other components. Web site is updated every week.
You can order on-line.

My followup to the others.

I remember when the last tube plant shut down. It was just after they converted U.S. curency from silver to sandwich. The press spun both news items the same way. "There is so much in circulation that we will never run out in 100 years."

Silver lasted about 3 months and was gone for all time.

Looks like they were right about tubes. While you don't see the McIntosh Audio guys smashing tubes just for the heck of it, there seem to be lots of tubes.

The reason is that the common ones, 6AU6, 12AX7, were used in a lot of other applications than Ham Radio receivers and transmitters. All the apps, with the possible exception of nut-case audio, has converted to solid state for all time.

I expect that the conversion happened faster than anyone expected. If that's the case, the tube supply isn't 100 years, it's more like 1,000 years.

Recall that every drug store in the U.S. had a tube tester and two trays of tubes in it? Where are those millions of tubes now? Warehoused somewhere because even though they are valueless, they might someday have some residual value.

Millions of tubes and what? 10,000, 50,000, maybe tube radios in use?

The greater problem seems to be switches, relays, caps, transformers, connectors, that sort of thing.

I'm a Heathkit SB specialist. Try to find those common parts that Heathkit used, such as the two prong mike connector (supposedly still available through Newark).

Knobs are another problem. Someone gave me three small Heathkit SB knobs. These things are 5-10 bucks apiece, when you can find them.

I have an SB-101 and SB-102 that I'll be using on HF. My back up rig is a solid state, computer controlled ICOM. I'll tell you, the big knobs on the SB-101 make it easier to use than the ICOM.

You try my freq counter/stabilizer at
http://members.iinet.net.au/~richardh/vfostab.htm

This will stabilize the VFO if it drifts less than about 5 KHz and provide a
freq readout.

Source record: 39349

This is apparently a mercury (gasp!) cell no longer available. I have a few of the transistorized (AN/USM223) multimeters that are great, but use these batteries in their resistance bridge. A nice inexpensive and rugged meter.

Also, I see that Fair Radio sells this sets "converted" to AA replacements.

Any experience with substitutes out there?

Anyone know how Fair "converts" these meters?

I don't want to destroy the earth by using mercury (gasp!) cells.

TIA

Thanks all for the leads on two prong mike cx. I have one on a crystal mike but I have 4 Heath rigs that use the cx. No urgency yet and I'll get around to ordering a few from Newark.

I've noticed that prices of boatanchors are falling again. I'll be buying to have a few to refurb over the next few years.

1336. ARRL Maryland-DC Section Convention & Hamfest

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-08-27 00:10:27 UTC
From: "E. Allen Brown, FALLFEST 2002 Programs Manager" <KZ3AB@ARRL.net>
Message-ID: <3D6AC373.4F556AC2@ARRL.net>
Source record: 39361

The Foundation for Amateur Radio (F.A.R.) and The Columbia Amateur
Radio Association (CARA) have joined forces to create what will
become one of the premier Amateur Radio events in the Mid Atlantic
region.

The dates are Saturday, September 7 and Sunday, September 8, 2002
at the Howard County (MD) Fairgrounds west of Baltimore near the
intersection of I-70 and MD-32.

See: http://www.fall-fest.com/ for details and directions.

VET Exams (amateur radio tests) will run from 8:00 am - 12:00 n
on Sunday, September 8.

Skywarn classes run from 12:00 N - 5:00 pm on Saturday,
September 7. See: http://www.fall-fest.com/skywarn.shtml
for info on how to register.

Many vendors have reserved space including "Satellite Sam," the
"RF Connection," the "Badge Man," "Started," "Ramsey Electronics,"
and more.

Seminars will include:

Amateur Microwave Communications with Bill Sea breeze, W3F
RF Interference Investigation with Mike Martin, K3RFI
AMSAT Satellite Communications with Rick Humbly, W2GPS
Coordinated ARRL Presentation with Tom Abernethy, W3TOM, ARRL MDC SM.
Demonstration of the Marconi Detector by Chip Weems, W4PBG
APRS Demonstration by Bob Bruninga, WB4APR
Amateur TV demonstration by Tim Keener, N3VGS

And more!

A special event station will be on the air demonstrating vintage and
home-brew equipment (radios that glow in the dark) with that wonderful
rich
sound of AM radio from the "old days."

For more info, contact: <info@fall-fest.com>

There should not be a problem, at all (hopefully). I use an Energizer 523 4.5v photo battery (I'll assume they're still available (I have a box of them in the fridge). One has to wedge them in, but they will go! It will be necessary to adjust the coarse OHMs adjust, internally, to get the front panel OHMs ADJUST to be in range, however. Regards de K3HVG

Ahh, the "Prick Six." Now that (and the PRC-10 manpack radio) brings back
some Army memories! The actor Lee Van Cleef can be observed using a PRC-6
in the 1981 John Carpenter movie "Escape from New York" that is set in
1997. The PRC-6 was the primary handheld of the United States Police in
1997? Hmm... Sincerely,

1353. Possible ATC-1 power supply? Help!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-08-27 18:40:09 UTC
From: porreta99@yahoo.com
Message-ID: <61c031e6.0208271040.768f7b87@posting.google.com>
Source record: 39376

Hi.

I originally posted this message to rec.audio.tubes and someone suggested I posted here, since this may be a AN/ART-13 (ATC-1) power supply. I put some pictures on-line at:

http://www.eih.com/mil_ps/

(I already have all tubes in place).
I would appreciated any help.

Here is the original message:

I recently bought an old navy power supply that I suspect I could use on a 845 power amp project I have in mind. The PS has two transformers:

- the first transformer powers a regulated circuit and puts out both 580VDC and 260VDC @125mA. It also has a couple of 6.3V filament supply and a 20VAC/10A output. This could be used to power the driver for the 845.

- the second one is not regulated and uses a 3B24 regulator tube. I was able to measure up to 1000 VDC with about 40% on the Variac. My multimeter is only rated to 1000VDC :-(The capacitor following the rectifier is rated @ 2000VDC. The markings on the transformer are:
M-7467114
GE CO
CG-301001
Does anyone have the specs for this tranformer?

With one transformer putting out in excess of 1000 VDC and the other with a 20VAC/10A output, can I use it with an 845?

Thanks.

1354. Anyone remember the 28/9?

Source record: 39377

Greetings,

I'm looking for information on a vacuum tube mobile transmitter that was popular in the mid 50's. It was a homebrew CW/AM rig, running (IIRC) a 6AQ5 as a final and another 6AQ5 as a modulator. I had one installed along with a Gonset converter and TNS (Twin Noise Squelch) in a 1940 Ford. I can't remember if it was a Handbook design or out of one of the magazines like QST, 73 or CQ. It was named the 28/9 because it developed about 9 watts on 28mHz. Thanks for any assistance.

I went to the home page of hammanuals.com and followed the link for manuals online. The mentioned pdf file is for the noise blanker only.

I have a 210X and found the manual and schematics at the following site. Also the Atlas 210X-215X news group at Yahoo.com has the same info.

Hope this is of help

Hi,
I picked up a free S-76 receiver and it needs some work. I am looking
for a schematic or help in the power supply region. There is a burnt
resistor on the filter cap. looks like a 1/2 watt resistor. My guess is
1000 ohms. dont know yet why it burned. The S-meter works! I think it
has possibilities. Thanks.

Is this the same connector as used in the Viking Ranger with PTT? I need to get one to make a mic adapter.

>But you are right about switches. Try to find a "function" switch for a B&W >5100-B.

Rotary switches have always been very "custom" items. But Centralab, I think it was, used to supply "universal" parts from which you could build up almost any switch -- except for the rotor segments, which are always going to be custom designed for that radio on function, bandwidth, and other catch-all applications.

1366. FS:Behlman AC supply (variable freq and voltage)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-08-28 01:33:57 UTC
From: Steve <zarco@sonic.net>
Message-ID: <3D6C197C.4F80@sonic.net>
Source record: 39389
Cross-posted to: rec.radio.amateur.boatanchors,sci.electronics.equipment

Hi Gang,
I've got a very nice AC power supply that needs a home.

Output is 0-130 VAC, 45-2000 Hz three phase, 1500VA.
Output voltage and frequency continuously adjustable.
Input is 120/220VAC 50/60 Hz.
Digital displays for both frequency and output voltage.
All solid state with huge transformers in two rack
mount chassis. Cable between the two chassis is included.

These supplies were originally used to verify that equipment
will operate over a wide range of voltages and frequencies,
but it'd also be very useful to folks that like old
military boatanchors that require 400Hz power.

Asking $650/BO plus shipping from northern California. A rough
guess at the weight would be 150 pounds.

Steve W6SSP

Wouldn't be for the ART-13. That needs 1000 VDC, 400 VDC and 24VDC.
Not enough caps on the pictured supply for that.
No model numbers on it anywhere?

G'day Doug

The 28-9 appeared in CQ magazine around 1952. It is described in the
"CQ New Mobile
Handbook" published in 1956 and edited by the late W6SAI Bill Orr..

The were a few versions of the transmitter, one using a 6AQ5 modulated
by a 6AQ5 another using a 7C5 modulated by a 7C5 and another with a 6AQ5
modulated by a 12AX7

There was the 28-28 with a 2E26 modulated by a pair of 6AQ5's if you
wanted to go hi power, Hi...

All versions used a 6J6 with one triode section as the osc/doubler and
the other as a doubler.
7Mcs crystals were used .

If you can't obtain the information locally lets know and I could have
it copied and sent over to you.

Can't say I *remember* it, but it's from CQ, May 1952, using a 6J6 and
6AQ5 for RF, and 6AQ5 for modulator. There's an improved version in
Oct. 1955, using a 12AU7 and 7C5 for RF, and 7C5 for modulator (but
6AQ5s could be substituted).

1375. National RAS (HRO) for Trade

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-08-28 06:27:37 UTC
From: "Jim Hill, w6ivw" <Xslimjim71@cox.net>
Message-ID: <h5romuskpn2h7u4s91uvieb5qc8fuq0hha@4ax.com>
Source record: 39198

I have a WW2 vintage Navy National RAS system, essentially a HRO jr (175kHz IF, no xtal filter, S-meter and bandspread,) with power supply, speaker, and coil box in a 3 1/2' rack. It has a complete coil set, which covers 190 kHz to 30 MHz. Condition is really dingy, like it has been stored in garages for 50+ years, with a light paint coating on some of the name plates. Some of the plug-in coil calibration curve plastic covers are badly warped and discolored. Electrically, I don't know. I have never applied power. First choice is a trade for a normal HRO with bandspread coils, but would trade for a transmitter or boatanchor receiver that interests me or sell it. It's available because I have a space problem, and am too old to move it without literally "straining a gut".

It's too heavy and awkward to ship, so would like to arrange a pickup. I live in the Los Angeles area, near Torrance and Redondo Beach. I'll be at the TRW swap meet this coming Saturday. I occasionally travel to the San Diego and north near the San Francisco area.

Anyone interested? Jim

Hi,

I have some 6U5 magic eye valves in stock. They are unused and in
original boxes. The label is Haltron, but I am pretty sure that they
are rebranded US manufacture. These can replace EM 34/35 if you just
change the socket and alter the resistors a bit.
The price is NOK 186.70 each - about US$ 23.65
You an look at them and order if you like, from my web site -
www.demostenes.no

Hello,

I have one of these nice vintage power triodes in stock. Heater is 10V
4.8A, anode dissipation is 65W and max anode voltage is 1600V. The
valve is NOS and in its original box. You will find a picture and more
data, and even order it - from my web site: www.demostenes.no
Just search for RS 31g.

1380. FS RACAL MA350 SYNTH for RA117 and MA79

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-08-28 08:16:21 UTC
From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <ump1gje86h9b57@corp.supernews.com>
Source record: 39203

SALE RACAL MA350 HF SYNTHESISER
We hardly ever see these fine units now and in fact this one, which has just come into stock, is the first we have had for almost a year.In case you are not familiar with the equipment in question,the RACAL MA350 Synthesiser was designed specifically by RACAL to provide absolutely superb frequency stability,when used with the RACAL RA117 HF Receiver or the RACAL MA79 HF Transmitter Driver.Perhaps more importantly from the Amateur's point of view,it may be coupled to both the RACAL Receiver and the RACAL Driver at the same time,enabling these excellent units to be used as a transceiver.The synthesiser is fully transistorised and is therefore relatively easily serviced.

The desired frequency is set in increments of 100kc's,10kc's,1kc's and 100c/s.
Further division is achieved by use of the interpolation control,calibrated in 100 divisions and which may be used on the 10kc's,1kc's and 100c/s settings.

A meter indicates the locking condition,in conjunction with an out -of- lock lamp.Output level is also indicated by the meter.

The synthesiser is designed to fit a standard 19" rack and is 8.75" high.Weight is 60lbs.

The synthesiser is in extremely good condition,and it has not been modified in any way.
It is in working order.
Operation is from either 100-125 or 200-250 volts a.c.

If you are fortunate enough to have either a RACAL RA117 Receiver or a RACAL MA79 HF Transmitter Driver,and wish to achieve the ultimate frequency stability from these fine units),then this MA350 Synthesiser is a must for you(RACAL quote 1 part in 10 Millions for the MA350).

A very big plus is that we will include a copy of the absolutely vast RACAL operating and service manual for the MA350,which weighs nearly as much as the unit!

The price,which please note,includes not only the RACAL Manual,but also the cost of packing and of Air Freight to the USA,is $840 US Dollars.

If you would like more information or wish to order this unit now,please contact:-
Graham Leo info@radio-exports.com
Thank you for your interest.

1381. FS RACAL MA1720 HF TX Driver

Newsgroup: rec.radio.amateur.boatanchors

From: "radio-exports.com" <info@radio-exports.com>
Message-ID: <ump446b50hst67@corp.supernews.com>
Source record: 39204

FOR SALE RACAL MA1720 HF DRIVER
This is another item that is becoming scarce these days.We used to get them in batches of five or six at a time,but not any more.The Ministry are no longer releasing them and the folks who already have them are not parting with them.I don't blame them either, as these fine units are damned hard to replace.Anyway,this is the first one we have had in the last six months.
Just in case you are not familiar with the equipment,the RACAL MA1720 HF Driver is widely regarded by many experts as the very best such unit ever to be made by RACAL.It uses very high quality components throughout,it is extremely stable and it is exceptionally versatile.
The RACAL MA1720 TRANSMITTER DRIVER provides full HF coverage, from 1 MHz to 30 MHz's in 100Hz steps.
A notable feature of this unit is the very high stabality of the output,from the all solid state circuitry .
It is also fast,locking of the selected synthesised frequency being achieved in approximately 10 milliseconds.

Extensive Operational facilities selected by front panel controls are:-

LSB.,USB.,ISB.,KEY,AM.,CW.,RTTY.,RTTY TEST,VOX & PTT.

The usual facilities are incorporated for receiver muting,antenna switching,receiver monitoring,drive unit side tone to receiver etc.
Output is adjustable from 25mW to 200mW and the output impedance is 50 ohms.
The unit,which is 7" high, is designed for standard 19" rack mounting.
Power requirements are 100-125 or 200-250 volts ac.

This is an extremely well made and very versatile piece of kit.
It is in very good condition and is in working order

The price, which,please note includes the cost of packing and air freight to the USA, is $825 US Dollars.
If you would like more kinformation,or wish to order now,
please contact GrahamLeo info@radio-exports.com
Thank you for your interest.

I cant find any model numbers on it. All transformers and caps have
the USN anchor symbol.

As per my original message, I was able to measure 580VDC, 280VDC (both
regulated), 20VAC/10A and one connection with more than 1000 VDC
(unregulated, this one has a 2000VDC rated capacitor).

Thanks.

1387. MFJ-16010-ST Instructions Needed!

Newsgroup: rec.radio.amateur.boatanchors

Source record: 39213

Well I know this is a sad day for those of you who like me
could not make it to Rochester this year.
I woke up this morning about 5:30AM thinking about them
being out there, flash lights in hand looking for the find of the day
in someone's trunk.

This is assuming that there was anything good left after the powers
that be allowed the flea market open YESTERDAY instead of keeping
to their posted schedule of no selling until 5:30AM today.

The flea market has been going now for more than 5 1/2 hours and
most if not all of the good pieces have already changed hands,
maybe more than once.
Now it's down to digging thru the junk boxes looking for
that much needed knob, tube or other part you've been searching for.

If you couldn't get there this year and you need some hard to
find parts. Check out the list of vintage/antique radio
parts I have put up for auction on ebay, I will be adding more
parts to this list almost everyday, so check back often.
The URL for my ebay page is listed below in my signature box.

And even if you didn't get to go to Rochester, maybe
you can make it to one of the upcoming Antique Radio events
hosted by the CC-AWA in the Carolinas. You can find a
schedule of these events on the CC-AWA web page. That URL
is also listed below.

Ahhh Rochester, 3 1/2 days of "Radioing your brians out",
oh well maybe next year.

Thanks for the info. I will try the 10K.
When I try to get the schematic my browser sez it isnt there.
I wrote to BAMA about it.

I have a problem with my Icom 720A. I don't know how to reset the
microprocessor. I think by turning it on with the FUNC button held down does
it but I'm not sure. Can anyone help?

I had a 745 and when the battery died I hunted and asked the same
question to no avail thinking that might be the problem. My
understanding is that the basic 'control' information is in a permanent
ROM and when the battery goes it is permanently gone. Hence, no reset
capability.
The solution at the time was simply to send the little module to ICOM
and they replaced the battery and program info. This cost $35 in 1991.
Duuno if what I learned is correct or if it applies equally to the 720.

Hey - it IS a boatanchor, right? I just figured that the folks who like to collect boatanchors (like me) also like Victrolas too.

PICKUP ONLY - Tacoma, WA

www.boatanchors.com/stuff/index.html for several photos

Good condition - works great. Comes with lots of new needles and lots of records to play.

Thanks

No problem -- I've got the 1955 article if you need it, but not the
1952 original.

I'm amazed that they could get power out of an audio tube at 10
meters! Guess between that and the ARRL regen using two 6AQ5s, the
6AQ5 would be my deserted island tube of choice!

The bama site can be a little temperamental, and web browsers make crappy
ftp clients. Rather than using your browser try using a real ftp client,
even the command line with WinDoze will work.

Start / Run / command.com (or cmd.exe) (or open a MS-DOS window)
ftp bama.sbc.edu
username> anonymous
password> youremail@yourserver.com
cd downloads
cd hallicra
cd s76
cd pages
dir
bin
get S76-01.gif
get S76-02.gif
etc.

Worked for me.

I'm looking at the schematic of the Navy power supply for the TCZ (COL-211101) and the connectors and outputs don't match your unit, at all. The ART-13 takes 400v, 1150v, and 28v DC at about 11 amps.

It's a pretty rugged tube. Back then, I had one running on 50mHz as well, though I only got about 5W out of it. Always wondered if it would work on 2M, but never tried it.

I think I'd like something larger for my deserted island tube - maybe an 807. :-)

Hi,
Me again. I am restoring a DX-20 and wonder if anyone had one that would fit the chassis and allow the cover to be put back on. I could use a cover also as that one is missing. I could use the power supply that is on my HW101 but that wouldnt mean modifications.
Any comments about my punching two holes in the back of the DX-20 and adding a octal socket and a cable . The cable would plug into the HW101 supply and the octal socket would allow me to plug the VF-1 in for power.

I used to pound out CQ on a single 6AQ5, a 6AK5, 117L7/M7. And others I have forgotten. Might have been a 3A4 in there somewheres. I remember the 2 turn loop with a #47 pilot lite I held over the output coil for tuning. That would lite up a dark room(3A4 not). We used to do line of sight flashlight code keyed by a hand key several streets apart. Just kids having fun.

Are they all identically configured? 6AQ5A, 7C5 & 6V6 are all the
same toob, within their ratings. :-)

My first was a 6V6 or 6L6 and a 40 M cw band crystal. The tank coil was wound on a plastic pill container. I used to QSY the crystal by rubbing pencil lead on the crystal element. Some of these tubes were available from TV sets. The antenna was made out of cheap 300 ohm twin lead. The receiver was a WWII 19 set with the marking in the cyrilic alphabet..
Today, out of the box and on the air in 10 minutes. I miss those good old days.

The version using the 7C5 used a 12AU7 in lieu of the 6J6 in the
osc/mult section.

The "Combo" version using the 6J6/6AQ5 in the RF section had a 12AU7
and 12AX7 in the
modulator section.

Built on the same chassis was a 2 tube converter which was probably
designed to feed into the cars radio.

Whilst surfing through some old CQ Magazine from the 1956 era when Wayne Green W2NSD was the editor the following letter from David J Wilkie W3LSG (Still licenced today) appeared in the October 1956 letters to the Editor column.

I recently acquired a "Signal Corps Wireless Set No.19 Mark II Transceiver". Are there any available schematics or conversion data for this rig?. Any info will be appreciated

The reply was

The only conversion that we seem to have on the files here at CQ calls for 100 feet of 1" Manila line, one end of which is to be tied securely around the MK II Transceiver. This then converts the unit into a fine anchor for a small boat . If any readers have better conversions we will be glad to hear about them.

oOo

Seems that they had "anchors for boats" back in those days

Hi,
You can use a very watered down mixture of polishing compound. Notice
I said polishing compound not buffing or grinding. I use it in a
plastic baby bottle, just poke a little bigger hole in the nipple.
Try starting off with a teaspoon full to a bottle of warm water.
Shake it thoroughly to mix. Treat it like car wax. Soft rag, very
lite pressure. Try an out of the way spot if possible first. It will
remove oxidation and leave a waxed looking finish. It will also work,
in this diluted form for plastic, but be very careful with pressure
and speed of rubbing :<}

Actually, the RARE item was the Heathkit catalog page (page of which he scanned) on the auction page.

I remember THAT mistake by Heathkit from the 1970's .... plenty of jokes on the ham bands about it .. at the time.

I contacted seller, who is selling this from estate, and he is correcting.

I'm cleaning out my filing cabinet and have copies of the following manuals to give away. They are free if you pick them up at my door, or for the cost of postage if you want to have them mailed. I'd guess about $3.00 per manual would cover the postage. They are available on a first come basis.

The manual copies that I have pulled out so far are;

Heath apache TX-1
Hammarlund HQ-110
Drake T4X/T-4
National's Anniversary Photo Album
National NC-300
National HFS
National NC-183D
National NC-183
National HRO-60

Actually, the RARE item was the Heathkit catalog page (page of which he
scanned) on the auction page.

I remember THAT mistake by Heathkit from the 1970's .... plenty of jokes on
the ham bands about it .. at the time.

I contacted seller, who is selling this from estate, and he is correcting.

w9gb

Did you also notice that the Heath catalog spec section starts out by saying
that coverage is the "18-10 meter amateur bands"? Heath must have been
running on empty by then.

BTW, $389 in what, 1972? According to the inflation calculator at:

http://www.bls.gov/cpi/

that's $1,701.90 in 2002 money.

>>

No, you are all wrong........

It is a R-1511/GR a "Hybrid SP-600" during the vietnam era. It had 9 tubes and 8 printed circuit boards. It was a wideband hf receiver with a 200kc bandpass filter. (KC? yep, I'm old and it said kc like the R-390 series) They weere mounted in bamks of 5 so they could cover 1 mc of hf spectrum and "see" who was talking where. "See"? Yep, they used tape and were looking at the hf spectrum to see where the vietnamese were talking. Usually mounted in aircraft to sniff the segments of the hf spectrum they were interested in. The tapes were sent to Ft. Meade, Maryland for interpetation. For the unknowing, this is the home of NSA (National Security Agency).

This is detailed in this web page under SP600.

Message-ID: <Cuec9.257919$983.528528@rwcrnsc53>
Source record: 39094

The R366 is not a familiar number but...
The TRR-5 was a tube type receiver that covered 20 to 27.9 Mhz in FM mode.
It had 8 or 10 channels and could operate on 12 or 24 Vdc.
Unknown where a manual might be obtained.

1471. Hallicrafters S-40A Mute/Dowkey

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-01 04:46:03 UTC
From: Josh <josuha1954@yahoo.com>
Message-ID: <un37hckl2gsa1a@corp.supernews.com>
Source record: 39095

I was looking at the diagram for the S-40A. I could not find the mute pins on the rear socket. I see that pins 2 and 4 have no connection at all according to the diagram. Also the manual I down loaded does not mention the pins.
Can the "standby/receive" switch be wired to these pins and used for the dowkey relay accessory contacts to mute the receiver?
I was thinking of running one wire each from both poles of the SPST switch of the "standby/receive" switch and running them to pins 2 and 4 of the socket. Any suggestions appreciated. Thanks

Hi all...

I'm still trying to find some of the original radio
equipment for my airplane (an Aeronca L3B "Grasshopper")...

The specific equipment I still need is:

AVA-120 Trailing wire antenna
AG-40B Wind generator

Any help would be appreciated

I have a OptElectronics FC-50 counter that has 7 of 8 bad ones

This counter'd be a $11 hamfest treat as-is.

Does anyone have a bag or these diaplays that'd part with a
half-handfull for a couple of bux & postage?

Thanks

Marty

Very good. Just checking base. I was wondering if the two pins (2 and 4) in the accessory socket was put there for that reason? Thinking that model was not wired for that to keep costs down. Anyway, thanks..I'll post and let you know how it turns out.... Josh..

This LA-400C 10 thru 80 meters....from the original owner whom is a silent key....This amp is from the late 50's from a place down in Lafayette, Ind.. (no longer in business)...runs four 1625's in grounded grid or four 837.s at 1300 volts on the plates....I bought four new 837's from Antique Electronis a while back with intentions of installing them but lost interest...the modify 1625's are real hard to locate now so this amp is ready for 837's per manual with a filiment wire change...This amp is like new....comes with a manual and it's heavy...

You guys with those Central Electronic exciters would love this amp...runs 800 watts SSB....400 watts CW and 200 Watts AM.

Will be packed real well using styrom foam blocks, etc.....$220 plus help with shipping.....Tnx Jack K8BVJ

I just looked at the "mystery" receiver and recognized it as the same one I have had for about ten years. Mine hasn't a single bit of identification on it except something like "serial No. 1" written in magic marker on it. The owner of this "mystery" receiver should have sandblasted it or something to remove the crud. There were dozens of these in the Army maintenance depot at Vint Hill Farms, VA when I first went there on business many many years ago.
If anyone is familiar with this receiver, maybe he could tell me why there were several coax connectors, apparently outputs, as shown in the photos. I haven't looked at mine in a while but I was hoping maybe one of those boards output a narrowband signal. Sadly, this receiver has no BFO so even if it has a narrowband output, it wouldn't do me much good. Does anyone know?

Message-ID: <3D7263A1.1D95BCD5@pivot.net>
Source record: 39112

Hi Josh....

The S-40A has the standby switch in the normally grounded center
tap of the power transformer. By opening the switch, B+ is removed
from the receiver. There is a lead to pin 5 of the rear socket which,
if grounded, will turn the receiver on. This is not a good system
because it removes B+ from the oscillator and makes for frequency
shift when going from transmit to receive. Tha later Hallicrafters
models lifted the ground side of the RF gain control for transmit.
This leaves the B+ on the oscillator and audio stages.
My suggestion, if you want to use the existing switch for T/R control,
would be to ground the transformer center tap, bring the ground end
of RF gain to pin 5 and wire the Standby switch as you suggested.
Another advantage of this system is that you can use an external RF
gain control that you can adjust for monotoring TX signal.

73 and GL, Roger

From: novatech@eskimo.com
Message-ID: <aku36vdfm1@eskinews.eskimo.com>
Source record: 39120
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

The original version of the BC-312 shortwave receiver used a DM-17
for its power source. All later versions (-A and up) used a DM-21.
I have a 1937 (http://novatech-instr.com/Ebay_Images/bc312plt.jpg)
BC-312 that I want to restore (for fun, not for sale) to its nearly
original condition.

Anyone have a DM-17-- any condition, any pieces? I can trade modern
hardware like DDS signal generators, etc. or purchase outright.

I am also interested in BC-312 early version (pre-WWII).

TIA,

Steve.

MOst any model engineering supply shop place has them. They are quite
common on model steam engines. Coles Power Moels in California for
one has them. Do a Google search for Model Engineering.

1506. The Armyradios mailing list:

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-02 03:31:07 UTC
From: Patricia Gibbons <wa6ube@tactical-link.com>
Message-ID: <akum36$41u$1@slb2.atl.mindspring.net>
Source record: 39129

For those into collecting, restoring, and especially operating military
communications equipment, the armyradios mailing list is now at
560 subscribers..

The perfect place to look for, and share technical info.
postings of items for sale/trade, and wants are also
acceptable ..

see:

http://groups.yahoo.com/group/armyradios

If you enjoy the green stuff with handles, or CARC stuff,
or black-crinkle, you are encouraged to join in on the
fun !!.

If I was trying to fix this, assuming this is just a 7-segment
readout and not one of those readouts with decoder+latch+counter,
would be to find out what it is. Find out the size, whether it's
common cathode or common anode, what side the decimal point is on,
and perhaps even current consumption. Find the data sheet, and
you'll get this information.

Then, find some available readout that matches the necessary requirements,
and buy those. Buy a full set, and replace them all, to avoid
differences between types.

I just checked my ECG replacement guide, and it wasn't listed
in there. That would have made it really easy to check.

It seems a tad odd that 7 out of 8 have gone bad. If the one
that still works is the right most readout (ie the least significant
digit), you might look elsewhere assuming you have verified bad
readouts. The circuit might have blanking on unused readouts,
and the LSD is on simply to show that things are working; when you
apply a signal, the needed digits will light up. Or, the circuit
may multiplex, and the portion that does the multiplexing isn't
working properly.

The unit is a receiver and is completely stand alone. The SB-401 was the companion Transmitter for this receiver. They could be linked so that you could transceive from one VFO or split them using a switch for that purpose on the $01 if memory serves. That's why there are all those RCA jacks on the back of it :). The last operational ham station I owned. I think I still have the manuals for the 303 and an extender board in a junk drawer some where :)

1537. NCX 5 II resistor question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-02 15:38:00 UTC
From: donlk@webtv.net
Message-ID: <27104-3D7385D8-205@storefull-2394.public.lawson.webtv.net>
Source record: 39060

I am repairing an NCX 5 Mk II and a resistor has burned (unreadable) due to a shorted driver tube socket. This resistor is physically located on the driver socket between the driver plate and an unused pin. It now reads about 13 ohms. The unused pin is then connected to the plate of the first RF amp.
I only have a schematic for NCX 5 and this resistor is not shown on the schematic for this model. The plates of the driver and the RF amp are tied directly together on my schematic.
The thing looks a bit suspicious as the type of wire from the driver to the RF amp does not match the rest of the wire in the set.
Is this resistor supposed to be there on the mk II? A modification? If so what size is it supposed to be?
Thanks

DON

1549. FS: Lincoln 6 Meter AM Transceiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-02 21:00:04 UTC
From: Bill Golden <shortwave@pghmail.com>
Message-ID: <3d73d0c3@news.pghmail.com>
Source record: 39072
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For Sale:

Lincoln 6 Meter AM transceiver - Originally sold in 1961 by
Allied Radio in Chicago, the Lincoln 6 meter shoebox-sized
transceiver was a "step-up" from the then-popular Heath
"Sixer". Here's your chance to own a rare "60's Classic"
rig, and this one's in absolutely beautiful condition throughout.

It's transmitter is crystal-controlled and plate modulated for
crisp and clean sounding audio, with a power input of 7 watts.
Receiver is a sensitive superhet, with a built-in noise eliminator
and AVC. An RF stage precedes the receiver's detector for
excellent sensitivity and selectivity, and to keep RF radiation
to a minimum. Covers the entire 6 meter band from 50.1 Mhz
to 54 Mhz. The Lincoln has a built-in A/C power supply, or it
can be operated using an external 12 Volt DC power supply
(not included). Complete with operation manual and schematic.

Add a crystal and a mike, and join in the 6 meter AM fun with
this sharp looking little rig. Price is $60 plus $15 for very well
packed, insured shipping (U.S. only).

If interested, please reply to shortwave@pghmail.com
for further information.

1561. SP600 Crystals

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-03 02:47:23 UTC
From: gdculbert@msn.com
Message-ID: <1b77bf5d.0209021847.2c556e90@posting.google.com>
Source record: 39084

Hi,

Does anyone have the formulas for ordering fixed freq. crystals for an SP600? My unit (the love of my life) after recapping still had two dozen other problems which I had a ball finding and fixing. Last problem is I can't get the xtals to work. I saved lunch money a month ago and got what I thought was a 10.000MHz (WWV) crystal. They lady at the crystal Mfr seemed to know what I wanted, and I ended up with a 13.955 crystal. The FFO does put out a good signal; the 150V is correctly switching from the 6C4 to the FFO, but no evidence of proper operation at 10.0MHz, 10-3.955, 10+3.955,... I even bypassed the switch next to the 6C4 in case it was bad.

I just didn't want to tear back into the RF deck cause it works great now.

Thanks
Gary

That sounds like the correct crystal Gary.

For frequencies between 7.40001 to 12.04499 the manual says to add the IF frequency of 3.955000, fundamental mode of operation.

Current production Ei and JJ brand are about $8 each and are actually very good. Sovtek is a little more expensive, but is okay, too. The usual tube suppliers have these.

Hi Roger
Ok, pin 5 (B-) is coneccted to the center tap which is already grounded .
I just disconnect Pin5. Run the ground from the RF gain control (Shows
"sensitivity" control as discription in manual.) and wire the switch as I
previously said to pins 2 and 4 which has no connections as of this
time..sound about right? Thanks...

By the way, just finished the recap over the weekend, 3 out of tolerance resistors replaced. Sounds real good. Going to do a tweak an alignment next week. As soon as I get the "bugs" worked out, I have a auto shop here that computer matches paint. I am going to get a spray can and a bottle of "touch up" and give the old girl a makeover. I know my station won't be blasting the airwaves, but it sure is lots of fun. Thanks everyone for their help. Now to find a transmitter for 75 AM...I'll let all know how it go's.

Well, just about as sad as expected. :-)

I do have a good collection of tubes, but the 12ax7 are not amongst them. And I am also lacking one 13E12. Maybe someone would need two 4CX250B ? One used 2000 hours - the other believed to be nos. Oh yes, I'm also in need of a 6B4G.

Ok, I got to buy some 12ax7's before christmass. Or use whatever I have.

:-)

I don't see anything sad here. The good news is that you can still buy brand new tubes. I how said tubes are obsolete?

From: Ronald Oberloh <wa0kds@yahoo.com>
Message-ID: <3D764E44.929CB6BD@yahoo.com>
Source record: 39014

Hallicrafters Paint Color:
SX-100 Top Aluminum Amercia's First by Rust-Oleum HD2815
SX-115 Top Aluminum Amercia's First by Rust-Oleum HD2815
SX-100 / HT-32A Bottom/Front sides Dark Anodized Bronze by Krylon 2206

Speaker 48 Light Machine Gray by Rust-Oleum V2183

I do not have the number right here but Krylon Semi-gloss (semi-flat) is the black that I used on the cabinet of my SX-115 that seems to come very close to the original color on mine. I am not sure why but the SX-115 seemed to be painted different than the SX-100 and my HT-32A . I believe the HT-32B was the mate to the SX-115 but have not seen one of these so do not know what color it is.

1605. Help with tuning Heath SB-102

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-05 03:42:02 UTC
From: Adam Adkins <duty_mountain@hotmail.com>
Message-ID: <MPG.17e08ead68586d1d989680@netnews.attbi.com>
Source record: 39028

I recently had a pile of estate equipment fall on me, among which
is a Heathkit SB-102. It seems to work fine on receive, but I'm quite
ignorant about how to properly tune the rig for transmit. There is no
manual, and I was hoping someone could tell me how to tune up the radio
so I can get it on the air.

Thanks for your help!

Adam Adkins, KM5N

1606. Vibroplex setup?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-05 03:52:29 UTC
From: JR <nospam.jroik@shaw.ca>
Message-ID: <1yAd9.263716$f05.14338370@news1.calgary.shaw.ca>
Source record: 39029

Did Vibroplex ever put out instructions on how to set up one of their bugs?

If they did, could someone scan a copy for me and email them to me.

Thanks.

Jim

Why haven't you done an internet search?
Setup instructions for Vibroplex bugs are available at several sites.
Try vibroplex.com, etc, etc

Doug

FOR SALE:

British WW2 straight key - now reduced to $25.00

Shure 202 hand microphone
Gray, sharp appearance with RED PTT, excellent condition.
Great for use with any station - looks excellent.
Reduced to $25.00

Icom hand microphone, low impedance, black.
Picture available on request.
Not the 'HM-36' or any other mic for your late
model rig. Just a good mobile mic - probably went with an
IC-21 or IC-202 is my guess. No model number on it.
Will sell for $15.00

James Millen Company Grid Dip Meter with manual.
Model 90651 GDO mint in the original Millen carry case.
Best looking one you will find anywhere.
Available for $125.00

Omega - T antenna impedance noise bridge with instructions
This unit will analyze your antenna impedances and give lot of useful
information. Finds resonant point and impedance at various
frequencies. Now reduced from $50.00 to only $15.00

Meters:

RMCA 0 - 8 Amps RF. Black case that is 3" diameter. Meter looks new.
QTY 1 only at $10.00

0 - 10 mA - marked "Plate Milliamperes."
Sterling Manufacturing Co. 2" diameter with chrome finish.
QTY 1 for $6.00

Phasetron 0 - 300 A DC, new meter in box.
Needs shunt. Has black case and is 3" in diameter.
Very nice looking.
Qty 1 available for $8.00

Shipping additional

Fahnstock Clips for 50 cents each? If I had a horse, I'd horse whip
you!

Even at 6 for a dollar (AES:
http://www.tubesandmore.com/new/scripts/silverware.exe/moreinfo@d:/dfs/elevclients/cemirro
r/ELEVATOR.FXP?item=S-H11-4043-6),
it's an outrage. What's next: burnt-out light bulbs, $5 each or 3 for
$20? (see other thread <g>)

Cordially,
Richard Kanarek

I am selling a hard to find Bird model #74 6 position "N" connector coax switch, called the COAXWITCH, minimal insertion loss thru 2 GhZ. Over 3 KW rated. Pull out, turn and push in type switch handle. Sure locking and tight connection. It is new and unused in original box and packing with instructions.

Original cost is near $500.

$175 + Shipping

Please email

I didnt think anyone used them anymore and they went away like the
hoola hoop.
Hard to clip a 14 pin IC in them. I cut my teeth on FS clips many yrs
ago.

I have a BC-603 fm 20 to 30 mhz receiver. I unpacked it from the
original carton and used it a few times as a tunable I.F.
It would be suitable to finish off a WWII radio set for restoration.
Mint conditinon. If anyone is interested in seeing a picture I will post
it on my web site.

1625. FS: Heath HR-10B Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-05 15:26:19 UTC
From: Bruce Stock <ab7yd@earthlink.net>
Message-ID: <vIKd9.9179$LI2.622549@newsread2.prod.itd.earthlink.net>
Source record: 38948

The HR-10B is the matching receiver for the Heath DX-60B transmitter. It is a ham band only receiver covering 80-10m, with a crystal lattice filter in the IF. This one is in very good physical and electrical condition. It may be had with or without the accessory 100kc calibrator. See pictures at:

http://home.earthlink.net/~ab7yd/misc/HR10outside.JPG

http://home.earthlink.net/~ab7yd/misc/HR10inside.JPG

Yours for $65 without the calibrator or $85 with it. Plus shipping from Seattle, WA.

73, Bruce AB7YD

Not to mention that just about all the new
ones acailable now are tin-plated pot metal
imported from China. They AIN'T the good
ole Mueller ones we all knew and loved!

Rule #1: "Made in China" = Absolute pure useless junk

Rule #2: If it's "Made in China" walk away from it...FAST!

I have four pcs of the very nice Siemens F2a power pentode for sale.
They are NOS and in original boxes. Picture and technical data on my
web site - www.demostenes.no
Just search for F2a in the left hand corner.

I didn't think pot metal was springy? I thought it was a brittle metal
that is usually die-cast (isn't that what Matchbox et a. use to make those
little die-cast cars we all played with as kids)

If you want a perfect match, go to a auto paint store that supplies auto body and paint shops. They can match the paint exactly and will formulate it for whatever spray system you want to use for a small charge. I've painted many older radios this way and have had excellent results.
Good luck!

Hello,

These valves are completely new, never used. They are in original
boxes and in mint shape. The valves are mostly HALTRON brand, but
they were a typical 'rebranding' company and got their valves from
well known manufacturers like Philips, Mullard, Siemens etc.

The following are for sale. The price shown are for each valve, and
as you can see, they are very low.

950 pcs DY 87 $ 0,40 HV single rectifier

60 pcs EB 91 $ 0,50 = 6AL5
40 pcs EF 50 $ 0,40 WW2 wideband pentode
20 pcs EF 55 $ 0,50 WW2 wideband radar pentode
200 pcs EF 183 $ 0,50 = 6EH7 remote cutoff pentode
40 pcs EY 81 $ 0,40 Single diode 550V 150mA
40 pcs EY 86 $ 0,40 HV single rectifier

220 pcs PABC 80 $ 0,50 triple diode + medium u triode
400 pcs PC 900 $ 3,00 high gm VHF triode + audio
90 pcs PCC 85 $ 0.40 double triode VHF
280 pcs PCF 200 $ 0,50 triode + high gm pentode
350 pcs PCF 201 $ 0,50 Triode + high gm pentode
630 pcs PCF 801 $ 0,50 Triode + high gm pentode
370 pcs PCF 802 $ 0,60 Triodepentode
730 pcs PCH 200 $ 0,50 Triodeheptode

150 pcs PCL 81 $ 0,60 Triode outputpentode
190 pcs PCL 82 $ 0,50 Triode outputpentode Wa 7W
200 pcs PCL 86 $ 0,60 Triode outputpentode Wa 9W
250 pcs PFL 200 $ 0,50 Pentode + high gm output pentode
(S= 22mA/V Wa 5W)

170 pcs PL 82 $ 0,50 Output pentode Wa 9W
170 pcs PL 83 $ 0,50 Output pentode Wa 9W
360 pcs PL 84 $ 0,50 Output pentode close to EL 86
200 pcs PY 81 $ 0,40 Single rectifier 550V 150mA
100 pcs PY 83 $ 0,40 Single rectifier 175mA

Even more discount is available if you buy large quantities.

Please contact me by fax (+47 57 69 12 67) or e-mail (arnoldg@c2i.net)
if you are interested

Yes for that real special color like the EF Johnson equipment having it mixed at an auto paint store make since but for these old Hallicrafters that never really had all their radios that same color anyway. (Poor quality control) the following is as close as any auto paint store will produce and a lot cheaper.

Hallicrafters Paint Color:
SX-100 Top Aluminum Amercia's First by Rust-Oleum HD2815
SX-115 Top Aluminum Amercia's First by Rust-Oleum HD2815
SX-100 / HT-32A Bottom/Front sides Dark Anodized Bronze by Krylon 2206

Speaker 48 Light Machine Gray by Rust-Oleum V2183

A very common use, even today, is to hold a specially sized Allen
wrench inside a piece of commercial equipment, so you don't have to
look for the right one when you're servicing in a hurry.

The Elecraft K2 has two special Allen wrenches used for various
functions. I mounted two Fahnestock clips inside the lid to hold the
wrenches. Otherwise it's a guarantee they'd be lost.

One of my bugs has some adjustments needing an Allen. Fahnestock clip
on the base is completely out of the way and has the wrench for when I
need it.

I got them from Mouser, but they still are widely available. Who cares
about a dollar or two for a few if someone is convenient?

Your prices are a little high my friend.
Try looking at: http://www.allelectronics.com/index.html

Example: 1/2 inch with plastic snap is $1.50 each.

I just purchased a bunch, and they work great !

Last year my 2nd-grade daughter came to me and told me she wanted to build a tube radio for her science project (!). At first I said "don't be silly," but then I decided she sould do it if that's what she wanted. I ordered a bag of Fahnstock clips from Mouser, laid out the circuit on paper, then had her mount all the clips and parts on a breadboard (really) using my electric screwdriver. I soldered connecting wires to the tube and coil sockets, but she did the rest of the wiring from the schematic. Used 4 C-cells for the heater, and 3 9-V batteries for the B+. Tube was a 6C8-G twin triode. It worked like a charm and she loved it!

How's that ad go? "Daughter listening to her first tube regen -- priceless!"

I doubt we would have done it if I couldn't still get the clips...

G'day Gentlemen,

My Bencher keyer an Allen Key that is held underneath the base plate by a chrome plated Fahnestock clip so they must be making those clips somewhere..

Used to collect old 45 volt batteries for the Fahnestock clips from a radio repair shop when.

I was a kid.

You could have used small brass nails and soldered the wire and
components to them.

Hi,
Why not get the split cores and use shrink tube to hold them in place.
I have been doing that for years and it is much cheaper than plastic
clips.

Receive payment today for some tubes, and got kicked out of my bank (Long Island)
Hell.....I asked for a Postal Money Order
It does says MONEY ORDER (Pinto bank) has cactus, rattle snake and roadrunner cartoons on it.
Then says: Western Union
Then says: "Integrated Payment Systems"
Then says :Englewood Bank, Englewood Co." (in fine print)

My bank manager says banks in New York State now have 100% disgressin to protect themselves....after showing it around the back (people laughing) handed it back, saying we no longer have to take or process these supermarket things.
Saying these were usually for local welfare and state payment's to local near issuing branch's in Texas/New Mexico.

The buyer is now screaming his head off crying "Foul" with nasty email.

The alternative is to use 1/8" by 3/4" staples. Available in hardware stores in the pneumatic nail/staple gun section. A lifetime supply in a single box. Note, they are glue coated, so you might want to soak them in MEK first.

Use a 3/8" spacer (a piece of wood with a 3/16" diameter hole) to guide them into the breadboard where you want connection points.

Slip some 3/16" diameter by 1/2" compression springs over the staples and presto, you have your very own lead clips. Similar to the spring clips radio shack used on their "project boxes."

If you're really cheap, or can't find individual springs, get a curtain spring
for RV curtains (van windows and such) stretch it out then cut them to length.

As a finishing touch, you might want to make some butterfly shaped metal strips to hold the springs captive on the staples. Push the spring down and slip the strips in sideways, then turn them flat.

Several people have e-mailed me with questions on the specifications.
The full specs from Bird are:

Bird Model 74 Coaxwitch Specifications

Useful Freq Range: DC to 10 GHz
Max RF Voltage: 500 VRMS (Mike's Note: this is 5KW at 50 ohms)
Atten to unused Channel: 75dB

Frequency VSWR Loss (dB) Max RF Power Rating (Watts)
100 MHz - 0.02 850
1 GHz 1.06 0.09 200
4 GHz 1.3 0.22 75

I ship via USPS, FedEx, and UPS. FedEx Ground is usually the least expensive.

There's also a freebie program called 5D that you can dump in most any
format and it creates a pdf file. It sets up as a printer option and
you just send to it instead of a printer.

I got one of those for something I sold on eBay. It was only about $20 and a local Western Union agent cashed it (but only because he knew my brother-in-law). He said the usual process is to take it to a "check cashing" storefront. They will probably cash it, but charge a commission for doing so.

I now clearly state "Post Office money order".

I remember when I was in elementary school someone built a one tube radio for the science fair. It used a #6 dry cell for the "A" battery, and a 90 volt "B" battery. I think it used a
1U4 pentode in a regenerative circuit. Anyway transistor sets were common back then, along with 9v batteries which looked like small versions of the 90v "B" battery. The kid that built
the radio was having a problem getting it to work and someone suggested that the batteries were
dead. The question was raised as how to test the batteries. One kid said he tested transistor
batteries 'with his tongue'. So ... someone tired that on the "B" battery. Needless to say the battery was quite good.....until it got thrown out the window by reflex action.

Greetings!

I have for sale a real nice Courier. I am the second owner. The
original owner installed a relay controlled by a toggle switch.
The purpose of the relay was to be able to use the amp
with a transciever.The toggle switch is NOT installed permanently.
It hangs out the back on a pair of wires. In other words, the
original owner's "mod" is non-destructive and completely reversible
and documented. The linear works well and looks great. Manual
and manual copy included. $475 plus shipping from Lincoln.
Nebraska.....OR......come pick it up!

thanks es

I'm not sure how the receiver is actually wired, but on the schematic the transformer center tap is connected to pin 5 of the rear socket. The standby switch is connected from center tap to ground so that in receive position the center tap is grounded. In the standby position an external switch from pin 5 to ground will activate the receiver. All you have to do is locate the center tap (black/yellow I think) and ground it to the chassis. Run the switch leads out to pins 2 and 4 for relay control and the RF gain out to pin 5. Grounding pin 5 will turn the receiver on.

I rebuilt a couple of S-76's and found many of the high value resistors in the noise limiter/audio/AGC areas way out of tolerance. Also, most of the old paper caps in these areas were leaky too. I wound up replacing all the papers just to have peace of mind.

GL on the project, Roger

HI,
I have an HF-8050A I wish to sell. I was wondering if someone can give some guidance as to their current worth.
It's in almost mint condition. It was sitting in storage for many years and I pulled it out 2 year back. It had a few dead tants and after recently finding a few schematics I've replaced them, apart from that no work has been done on it.

Has 10 Hz steps from the thumbwheel, no extra filters.

I'd like to know if I should be looking in say the US$600-$800, US$800 - US$1000 or $1000-$1250 bracket etc.

any advice welcome.

I guess that a standard check is as good as a bank money order. Sounds like it was just a matter of not wanting to wait unit it cleared. I am assume that the problem with the bank money order was the person that recieved it didn't want to wait for it to clear. Can't say the bank wasn't being careful.

Hi,

>Who was Fahnestock anyway?

Ernest B. Fahnestock had a number of telephone patents in the early years of the last century, and I presume was the owner of the Fahnestock Electric Co. In 1907 one John Schade, Jr. of Brooklyn NY assigned two patents to Fahnestock Electric, whose description sounds exactly like the familiar Fahnestock clip. The numbers are 845,268 (Feb. 26) and reissue 12,642 (April 23). You could look them up in the USPTO database; all I have is a paragraph from Electrical World.

73, Alan

A couple of days ago, I received this e-mail message:

QUOTE

Dear PayPal Customer,

This e-mail is to inform you of a recent update we have made to our
systems.
To avoid service interruption we require that you confirm
your account as soon as possible. Please click here and take a
moment to confirm your
account.

Please follow the following steps:

1.) Click here to
confirm your account.

2.) Your account will be updated in our system and you may continue using
PayPal services without any interruptions.

Please note: If you fail to update your account, it will be
'flagged' with restricted status.

Thank you,

The Paypal Staff

****
****

Do not reply to this e-mail. For assistance, contact the customer service
team.

****
****

END QUOTE

Now, I suspect this is forgery, probably an attempt to get my Paypal user
name and password. I was suspicious for two reasons.

1. I have two hotmail accounts and an e-mail account through my ISP. When
I signed up for Paypal -- to use it on E-bay -- I signed up using the ISP
address. This message came to both of my hotmail addresses, which have no
relationship to my Paypal account, but did not come to my ISP address --
which is what Paypal has.
2. Note that the "click here" address is in domain .to -- the country of

Tonga. I doubt that Paypal is operating from Tonga.

I figured it would be a good idea to forward this e-mail and the header to Paypal -- they may want to know that someone is attempting to spoof their customers.

I have tried and tried and tried and tried to get a copy of this e-mail to Paypal. When I go to their website, I find a form for reporting problems. But, it will not take a message longer than 1,000 characters and this message won't fit. I can't get it to them.

I have tried finding a real e-mail address for them -- to no avail.

Oh, well, forget it.

--

Regards,
Joe S.

Once she gets started it will probably only take a year or two before she'll be able to out solder you! I was barely 8 years old when I learned to solder, and by the time I turned 12 I was busy mowing lawns for money to buy good tools. One of the first was a Weller 100/140 Watt gun, and I think I still have it, along with several others I picked up over the years. These days I routinely solder SMT chips with 288 leads. (Under a microscope)

When I looked at 5D the "freebie" it put a "DEMO" watermark on all
pages until you paid to register the software. You also had to email
them for a key to unlock the demo. it took weeks to get it. By the time
I finally got the key I had given up and deleted the install package.

The one I mentioned is a shell for Ghostwriter and Ghostscript. The
basic software is free, but they have several other items to allow you
to edit existing PDFs to clean them up.

Maybe I got an older version. I had to register (free) and get the key
but it came in a matter of minutes and I never got to see the watermark
feature.

If it is working properly, it is worth around $3500. This would be the ball park, if you had the 6kHz and the SSB filters. When I was working at Rockwell-Collins, it was my understanding that they were selling these units refurbed for around $30,000 to $40,000. I picked up a few incomplete HF8054s and HF8010s from the Rockwell Inventory Disposal a few years ago for $5 apiece. I ended up giving them to one of the old timers at Rockwell before we moved back to Chicago. He eventually did get one of them running. The general opinion seems to be that the HF80 series are the best thing that Rockwell-Collins ever put out, bar none. The 851S-1 was an upgraded HF80, using an optical encoder for tuning, instead of the thumbwheels. They had a couple of the 851S-1s in the service center at Rockwell, along with an even rarer receiver, the 451S-1. That was one nice thing about working over there; I got to play with some pretty cool equipment.
On a final note.....I would probably keep that 8050; it is a great receiver!

Source record: 38917

I was fortunate to come across a Trio 9R-42J Receiver that is in near perfect condition. It appears to be a S-38 clone with a few extra features plus an S-meter. I found some info on a Japanese site that indicated it was manufactured in 1958. Anyone else have more info?

Thanks -- Ben

The S as in https means that it is a secure site! Not a fake site. Do a search info on https! All banks, online businesses use this. Now nothing is perfect and there is always a possibility someone may get your card info (slight) but this is much more secure than sending an e-mail with your card info.
Essentially: A trusted site sends you a Crypto Key. This is done in the background and you will not know this is happening. When your card info etc is sent it is first encryped with this Key that was sent to you. The only way this can be decoded is with a decoding key at the other end and therefore anyone intercepting this info cannot decode it without the proper key. There are however many unscrupulous individuals trying to break this system. This should not surprise you!

There's a lot of these schemes going around these days. I've been
getting a regular flow of them with return addresses marked as
ebay.something.
The bummer is that the folks like PayPal and eBay make it difficult to
report these things to them for investigation. They probably know
already but their manner isn't very assuring to their customers.

WARNING

Not sure how this thread started, but I received one of these SCAM
messages, which are NOT from Paypal (any more than SPAM has a real
email address).

The scammer is fooling you to log into HIS website (look at the source
code - view source - for the REAL web site that appears to be Paypal
on the screen) and he collects your Paypal username and password.

DON'T do it as the scammer can now log in to Paypal as you and do what
he likes.

Not true. "HTTPS" is an encrypted HTTP data stream (Secure Sockets Layer - "SSL"). Your browser (for example) has the public (encrypting key) installed and thus is capable of sending data that can be decrypted by the server holding the private key.

All HTTPS is good for is ensuring your data can't be intercepted along the way (which is a lot). But should these scumbags put up an HTTPS url next time, that's NOT a sign of authenticity, just cleverness.

I have a GSB 101 that I got for $20 at a junk yard.
I've restored it. A sad story: the thing had a bad
solder joint in the filter caps. It was obvious someone
tried to trouble shoot the missing HV. They substituted
a different choke, and didn't bolt it down. When it was
transported to the junk yard, the choke moved around and
wiped out all the tubes. I replaced the rectifier
tubes with 1N5407's in a string and re-tubed it. The choke
was WAY too small. I added a choke and a step start circuit,
powered it on (slowly, to form the caps) and discovered no HV.
Found the bad solder joint - then went through the forming
exercise again. Works great now.

I'm not interested in selling it - but maybe I've learned
something along the way that can help you out?

Per the inflation calculator at: http://www.westegg.com/inflation/

What cost $389 in 1972 would cost $1636.01 in 2001.

I do FCC exams both Commercial and Amateur. One exam session a guy from out of state brought me a MO from a Convenience Store. I tried to cash or deposit - can't recall which, to cover the fees. He had it made out to me. The bank would not accept it. I had to call him to get a replacement of funds and send him the original back, before the paperwork would be processed. Since that day until recently a time frame of about 4 years, I would not accept anything other than a bonifide Postal OR Financial Institution MO. Now, I'm told by the Bank I do business with, it is safe to accept all, which I've again begun doing.

You never know!!!!!!!!!!!!!

Yes that is the trick it needs to be deposited and not just cashed. A person that really needs the money right now really need a USPO MO which can just be cashed on the spot.

The radio never came with one. Various medium to hi-z mics will work.

The connector may be available from surplus outlets. I think it was
by Amphenol.

I used an Astatic crystal wire recorder mic element in a D104 stand years ago.

I have the Following Transistor radios; G,E, P745, 3-G.E. P807
series, Crown TR610,Zenith Royal 20.
I am asking $120.00 Plus shipping for all 6.
The radios are complete including correct knobs.
I have a lot so if you need anything let me know.

Greetings:

I have a HQ-100 I just completed refurbishing. It does not have the clock, however. I also have a very nice looking HQ-170 that I might consider trading. Do you have any pictures of the 2b/2bq? Are you more interested in a general coverage receiver such as the HQ-100 instead of a "ham band only" receiver such as the 2b and the 170? Let me know your druthers.

1752. Military Radio Collector's Meet- In The South

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-09 21:55:36 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <3D7D18D8.1A616A19@ix.netcom.com>
Source record: 38876
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

First- Is there enough interest to have a milradio meet
in the Central or Southern U.S. in conjunction with a major hamfest?

Second- What City?
Needs to be a major city, not too far north or too far south.

Example- Belton, Texas would not be good because
the nearest major transportation hubs are Waco and Austin.
They are secondary airports, so tickets and rooms are more costly
and there is a long drive to get to the fest.

My suggestions would be:
Dallas-Fort Worth area-
Major transport hub so easy to reach, plenty of cheap rooms,
HamCom hamfest.

Shreveport, Louisiana area-
Big-name casinos mean you can find deals
on transportion and rooms, good food, SARA hamfest.

Discussion, Please?

Hi to all,
I have a very nice GSB-100 Gonset transmitter for sale or possibly trade. It has a new Peter Dahl power transformer installed, new caps, tubes, power divider etc. Tested and works. Front panel is great, cabinet has been repainted. Transformer alone was $185.00 and asking $300.00. Prefer pick up in West central Arkansas, but will ship if necessary. Pictures available!

Please respond direct to wb6vse@ipa.net

Thanks es 73

(All of the following responses are "IMHO"...)

David Stinson wrote:
> First- Is there enough interest to have a milradio meet
> in the Central or Southern U.S. in conjunction with a major hamfest?

Should be - there seems to be a re-newed interest in the subject... and there are some notable collectors in these parts that probably could be enticed...

> Second- What City?
> Needs to be a major city, not too far north or too far south.

I guess the "Big Easy" is out then...

> My suggestions would be:
> Dallas-Fort Worth area-
> Major transport hub so easy to reach, plenty of cheap rooms,
> HamCom hamfest.

Well - I don't know if we'd go that far - would depend a LOT on when - but logistics wise - this seems to be a very good candidate...

If you're going to look at Shreveport - might consider a bit further east - Birmingham or Atlanta...

We had a modest Boatanchor themed meet at the '96 Birmingham HamFest at the Jackson Convention Center... VERY well attended - a large number of milcom related displays (including: complete running ART-13/BC348 display; large ARC-5 display - fully operational; transistorized BC-348; one of the most complete BC-654s displays -- complete with fully uniformed manikins..., etc.)--- and the "milcom" aspect was only modestly promoted / advertised.

Isn't there an annual milcom / military in general "meet" in the upper midwest that's pretty well promoted? (Chicago/Ohio/???)? Of course I agree - we've never been able to swing up there to make one of those, so one "closer to home" would be quite welcome.

best regards...

What you all might consider is hooking it up with something
like the military airshow at Reading PA... They do a full WWII
encampment and have lots of military planes and stuff there...

I think he meant to include the URL:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1380132407

Non-working "SB-313." Four days left to bid. So far, bid is up to $0.01.
That's a penny.
Actually, it may not be a bad buy -- says it's not working, only hum comes
from the speaker. That could be a simple problem and often it's only a
simple something.

My one SB-303 is enough for me.

I looked but couldn't find it. I'm mostly interested a 313 for the 5 kHz AM filter. Seems to be a lot of SB-104A's though.

> > Thanks
> > K5JOE
> >

I have about five of those things somewhere at my mom's house in
Hawaii. Some are the Pyrex military models with the metal base
ring and integral screws and the slit in the chimney for the HV strap.

These chimneys didn't end in a opening like civilian models. These had
an cylindrical extension of glass about an inch and a half long.
There's a slit in the side of the extension for the strap. The plate
cap would sit in venturi-like duct.

That is, if she didn't toss them along with my X-Men # 1 comic book.

I have some pretty odd stuff at her house, a 42 amp 7.5 VAC
transformer, a huge silver plated roller inductor, an air
variable capacitor about a foot long (I was looking for vacuum
variables), a pair of 4-1000A's, a small (3 foot tall) rack, a 20 mfd
12,000 V oil capacitor, a 6,000 VAC 1.2 amp transformer, anyone see a
pattern forming, a couple 4CX250B's, an SB-2LA, an SX-101A, an HT-37,
a Drake 2B and 2BQ.

I think I even have a tubular Collins mechanical filter that I was
going to do something with. I had a 4 element 20 meter Yagi on a 36
foot boom.

I acquired all this stuff when I was 18-20 years old in the late
1960's. What was I going to use that stuff for???

I was always broke and my mom thought I was spending my money on "bad"
girls. The girls complained that I was cheap and didn't buy them
stuff. That was 35 years ago.

What I should do is take a vacation out there, inventory all the stuff,
photograph it, sell it for enough for the trip, give the rest away to a

good home.

A fellow I know has been asking for the SX-101A. I even have the manual for it.

That may be the one I was thinking about - but since going (at least in the foreseeable future) isn't an option -
Sherry is the real "BoatAnchor" collector - and since she is the CFO of a small group of companies - her direct attention is required particularly on (every) Fridays - as she does all of the payrolls - and for some reason - people get a bit testy if their checks aren't on time.

That of course makes it rough to go any significant distance around the week's end... - hopefully as we both get nearer full retirement - we'll be able to make such trips.

best regards...

David

What time frame are you looking at?
Air Travel to Shreveport is high.
The Houston Vintage Radio Association is having it 24th
Convention at the Fort Bend County fairgrounds
Jan 31 and Feb 01 2003, west of Houston.
Plus the HVRA has been offer the use of the
San Jacinto Battlegrounds for a meet of some kind
for our work on the Battleship TEXAS.
The Battleship TEXAS in the back ground would
make a picture for a milradio meet.

>

Are you sure both tubes are out? The filaments are in series
between matched pairs of tubes, so if the heater of one tube is
blown, TWO tubes will be dark, not just one.

The one I own works great, however I've been warned their
transformers are under-spec'd so not to xmit for too long
and to keep the drive down. Just 10w CW in, yields 800w
out! At that, there's a pretty audible hum to the PS, although
undetectable in the carrier.

What's one is worth? I don't know. I found mine at a
swapfest in Longmont, CO about 5 years ago for $110.
Those 6JE6s alone are worth that. I've seen them for
sale "used" at $45/ea. Steep for sweep tubes.

Thanks, that explains it. When the two tubes went dark, I stopped
using the amp in disgust.

There's $250 in tubes in the thing?

What's nice about the 2LA is that it's a tiny amp and self contained.
It's even smaller than a SB-200 or 30L-1.

Hi All,

I'm looking for a manual for the KW-500 HF linear amplifier made by KW Electronics in England in the early 1960's. This runs an 813 tube in grounded-grid configuration.

All reasonable copying costs covered.

TIA,
--

I recently acquired a Collins 75A-4 Receiver,
complete with matching speaker.
It is in good condition, reasonably clean.
I was wondering just how much I could expect to get for
this nice piece of gear if I was to put it up for sale.
Can anyone help?

You could stop there - I'd be interested in it all, but don't want to
finance your vacation (at least not all by myself ;->)

I would be interested in the transformer and roller inductor, though.
I've got a pair of 450TL's I'm playing with ;-)

Oh, what a horrible piece of junk that receiver is! Even
with a good alignment it won't hear anything, and it'll
just get worse over time. Icky yucky old radio.

SO in that case I'd be happy to pay you $25 :-)

Ok ok ok - $400 to $900 depending on condition,
and if it has the CW filter. I paid $550 for mine,
and it did NOT have the filter, but is in very good
condition otherwise and works great.

<< It's not quite THAT SIMPLE!!!

Where's the speaker? Somebody without a bit of savy about radios might have a problem figuring that out... >>

I agree that it IS that simple. Figuring out that an external speaker should be connected to the speaker terminals when there is no sound, should be fairly obvious to most receiver buyers. But most shoppers will not have a clue about that heap of seller's comments. There is a class of eBay seller (that's low-class, but slick) who thinks that if they hype and BS the object, it will get a better price. Well, gosh folks, it appears they are correct. What does that tell you about the buyers?

Don

Tells me that anybody specifically wanting to buy a 75A-1 will just skip
over all the BS and assume the radio is not working and bid
accordingly. This isn't the type of item that a person who normally
buys Beanie Babies will accidentally run across and need to be convinced
about its specs, etc...
But, there's one born every minute.

Item 1.

BC-454-B Command receiver covering the 3 to 6 MHz range. Heaters wired for 12 Volts, usual ham modifications to the front panel adapter. Power and dynamotor connectors intact. Comes with all covers; one latch post on top cover is broken. Powered up in August, 2002 and received signals. Due to age, no other warranty. Picture available via email. $45 plus USPS Priority postage.

Item 2.

BC-455-B Command receiver covering the 6 to 9.1 MHz range. Same as above, except no top cover. Tubes not original metal. Powered up in August, 2002 and received signals. Due to age, no other warranty. Picture available via email. $35 plus USPS Priority postage.

I'm on the East Coast, if I had that stuff here, I'd be selling it or
giving it away to a good home.

Recently, I've given some thought to value and the worth of items.
I've decided that I want things that I can use now or in the near
future.

The silver plated roller inductor is a BIG one. I don't remember who
made it but the coil is square bar stock, not wire on a drum. I was
building a "California Kilowatt" but gave up the project when I got out
of college.

Maybe next year I'll fill a shipping crate with the parts and the
radios. I even had a basket of 6146's, A's and B's.

And the Vibroplex Champion, that's back there too.

Maybe....

>
> I would be interested in the transformer and roller inductor, though.

I remember those. Great big bulbs. I vaguely remember seeing
transmitter modules with 450TLs at the surplus store on Sand Island,
Louie's Electronics, there were big air capacitors in those too.

There's all that stuff there, of course... give a listen on 75m 3.880 and
40m 7.290 for the AM stations around up there. Parts are everywhere,
I'm just not sure that people are getting rid of 'em ;-)

> Recently, I've given some thought to value and the worth of items.
> I've decided that I want things that I can use now or in the near

Sounds reasonable. I can use those things you've got, now and will be
using them in the near future.

> The silver plated roller inductor is a BIG one. I don't remember who
> made it but the coil is square bar stock, not wire on a drum. I was
> building a "California Kilowatt" but gave up the project when I got out
> of college.

It'd make a nice variable inductor in a PI circuit with a supply of about
3500VDC.

> Maybe next year I'll fill a shipping crate with the parts and the
> radios. I even had a basket of 6146's, A's and B's.

Barker & Wiliamson "Butterfly" tuning condensers. Looks like a big bread
slicer :-) I've got one of those, that I'll trade ya for the roller inductor.

Or, I could sell it outright.

Looks good, there was an SB filter thread on the Yahoo group,
amateur-repairs. I don't have any filter info on my round n green
webpage, http://www.kiyoinc.com/heathstuff.html There are other
musings about SB's that you might find interesting.

This page is very preliminary so website critics, go easy.

I'm interested in an AM filter too. I've bid on several SB-313's and
they are going for WAY more than I'm willing to pay. I guess people
are buying them for the AM capability.

There are two different AM filters, 3.75 kHz and 5.0 kHz. I'd consider
building one even wider, 6.0 kHz or even 8.0 kHz, for international
broadcast.

If you list it on eBay (or anywhere else) be certain to list the EXACT filters that are included. Take them out and get the part numbers for each and include these in the listing.

Having said that, the value of a 75A4 is in the eye of the beholder. I had one for a number of years and did not really like it. (I liked my old HQ170 better for weak-signal CW operation.) For strong signal SSB work, the 75A4 was great. I sold mine and never missed it. Other hams will have different views of course. Most 75A4 buyers today are after a collectors' item rather than a daily-use item and this creates a wholely different and often irrational price range.

<< Having said that, the value of a 75A4 is in the eye of the beholder. I had one for a number of years and did not really like it. (I liked my old HQ170 better for weak-signal CW operation.) >>

I have the same view of that vintage of Collins receivers.

For a while in the late 50's I was able to use a Collins 51J4 and a TMC GPR90 for business and pleasure.

When I had to get on a frequency with some accuracy, the 51J4 was great. When I had to scratch for weak signals, the GPR90 was my choice.

Hi, Gang

I picked up a Drake DL-300 dummy load with no paperwork.
(BAMA came up empty).

I see Drake rated it at 300W, 30 second duration,
but I would like to know the continuous duty rating.
It uses a single Carborundum resistor
about 5 inches long, maybe 5/8 inch diameter.

Thanks,
Ed K4PF

Message-ID: <3D80CECA.24DF@attbi.com>
Source record: 38805

The Hallicrafters manuals listed below are for sale. Thanks.

73, Ben K8UYA

Except for the SR-400 manual, all are neatly punched for a standard 3-ring notebook which may or may not have been the way they came from the factory, I don't know. They all look like new except the S-40 manual which shows some minor wear.

S-40 /S40A Radio Receiver with 2 Service Bulletins $12
HT-32 Mark I Transmitter $12
HT-32A Transmitter $12
HT-32B Transmitter $12
SX-100 Mark II Receiver $12
SX-101 Mark III Receiver $12
SX101A Receiver $12

SR-150 Transceiver $15
SR-400 Transceiver $15
SX-115 Receiver $15

Prices do not include postage.

I made dozens of these
Rocks:
3393.7 kHz
3396.8 kHz
Effective series resistance: 25 ohms maximum
Load capacitance: 35.4 pF
Frequency tolerance: + / - 50 Hz

Values of C1 and C2= .5 PF (yes point 5) and gimmicks dont work to well
I never understood this, and had sharper cleaner performance plots omitting
C-1 and C2.
(C-1 and C2 ARE in the original Heath blueprints)
Value of C3=56 PF
Winding details for L1: (use a pull from bad 2.1 KC SSB filter, they have 2
of these cans).
I have used 2- fixed 2uH chokes in the past and a mini variable from MOUSER
for C-3 in the past

"HTTPS" means that your *CONNECTION* is encrypted. This does not
guarantee that the site you are connecting to isn't fake. Anybody who
gets a certificate can run a site with HTTPS including somebody trying
to run a scam.

In other words, "HTTP" in this situation is a guarantee of a scam, but
"HTTPS" doesn't guarantee it is genuine.

1842. Hallicrafters -Communications Equipment -1962 Model Sheet

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-13 01:08:12 UTC
From: WA8NPR <wa8npr@sssnet.com>
Message-ID: <uo2ekpv8hbe1e@corp.supernews.com>
Source record: 38816

I have for FREE an original four page 8 1/2 x 11" Hallicrafters Communications Equipment Product listing with pricing, dated Novemeber 15, 1962. Covers all amateur equipment models with a small picture and description . Picture of SX-115 and HT-32B station on cover.

Just pay postage.

Thanks for reading , Rich WA8NPR

1843. FS NEW POST Yaesu "STUFF"

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-13 01:26:13 UTC
From: radioleo <radioleo@earthlink.net>

THIS IS A NEW POST !!!!!!!!!!!!!!!!!!! NOW PRICED SEPARATELY...

I have a list of some NEW goodies, hope you like them.................

Yaesu FT-102 Transceiver, & Yaesu MD-1B8 Desk Microphone...$460.00

Yaesu FV-102DM External VFO...........$175.00

Yaesu FC-102 Antenna Tuner.............$175.00

Yaesu SP-102P Phone Patch/Speaker.....$100.00

Yaesu FT-757GX II Transceiver
Yaesu FRB-757 Amp/Relay.........$425.00

Yaesu FT-707 Transceiver, hand microphone $285.00

Yaesu FC-707 Antenna Tuner...........$150.00

Yaesu "Brand New In The Box" FV-707DM External VFO...$175.00

Yaesu "Brand New In The Box" MR-7 Rack for the FT-707....$39.00

Yaesu "Brand New In The Box" FRB-707 Amp/Relay.........$50.00

Yaesu FT-480R 2 Meter All Mode Transceiver........$275.00

Yaesu YS-2000 FT-101 Matching SWR/Power Meter.......$90.00

Yaesu YO-101 FT-101 Matching Scope........$80.00

Yaesu FV-101Z FT-101ZD Matching External VFO.........$100.00

Yaesu FF-501 TVI Filter.............$20.00

(2) Yaesu Landliner Speaker/Phone Patch........$50.00 each

Nye - Viking MB-V-A 3000 Watt Antenna Tuner.........$500.00

" It sells NEW for about $900.00"

Ten Tec Model 4229 Antenna Tuner $170.00

Henry 2K Classic Console Amplifier 10,15,20,40,80 meters.........$975.00
Pick Up Only in Los Angeles........
"It sells NEW for about... $2000.00"

Heathkit SB-221 Amplifier.........$525.00
10-80 meters, nice condition

PAL 120+ 12 Volt Tube Amplifier........$99.00

PAL KW-1 SWR/Watt Meter.....$40.00

Heathkit SB-614 Scope.....$100.00

Mirage B-108 2 Meter Amplifier 10 watts in 80 watts out.....$75.00

Bird # 43 Wattmeter.....$175.00
"It sells new for $309.00"

Bird 100C 100 Watt Element for 100 - 250 MHz.....$50.00

Bird 250H 250 Watt Element for 2 - 30 MHz.....$50.00

Bird 1000H 1000 Watt Element for 2 - 30 MHz $70.00

Bencher Keyer BY-2.....$70.00
"It sell NEW for $125.00"

Ham Key $40.00

"New In The Box" Alliance Rotor.....$90.00

Astron RS-35M 35 Amp 12 Volt Regulated Power Supply With
Meters.....$90.00

AEA MM-3 Morse Machine, Original box, and Manual.....$80.00

MFJ - 1278 TNC.....$99.00

(2) MFJ-1272B TNC/MIC Switch.....$10.00 each

Heil HM-10-5 Desk Microphone Wired For Yaesu.....$70.00

Gallon Dummyload.....$20.00

1845. Schematic for HP200CD needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-13 01:44:54 UTC
From: n4buq@aol.com
Message-ID: <20020912214454.29682.00002521@mb-bg.aol.com>
Source record: 38819

Does any have a good, readable schematic for an HP200CD audio signal generator from which I could get a copy? Mine is the series that uses 6AU6's and 6CW5's. The copy of the schematic I have is just not very legible and it really doesn't match the unit I have (it shows solid-state rectifiers instead of a tube).

Thanks,

Barry - N4BUQ

The basic scheme is the half-lattice filter; in this case it's
to of them cascaded.

This sort of filter was common when hams started building crystal
filters for SSB, in the fifties. The best place to find information
about them would be articles from that period about making them,
or books like the ARRL "Single Sideband for the Radio Amateur" or
CQ's "Mew Sideband Handbook" that collected such articles. Back then the
topic was new, so the details were all there. It sort of faded
from view, when commercially made crystal filters became available.
You might find things in more recent handbooks again, though ladder
filters have taken over, because there are advantages of their
design.

I think the scheme saw common useage back then because of the
availability of cheap surplus crystals in FT-243 packages (ie,
cases that you could easily take apart). Then, hams would pick
an IF frequency where crystals were commonly available, and then
grind one or both sets to get them on the needed frequency. Of
course, they were starting from scratch and so picked their
IF to match the available crystals. As I said back in July,
you have to use the IF of the Heathkit, and so you aren't likely
to find crystals on the needed frequency. You'll have to have
them made, and I think you'll have to dig deeper in order to
figure out how to order the crystals.

I'm not going to read through the old articles. I do recall
people saying things like the bandwidth of the resulting filter
would be 1.5 times the spacing of the crystals. But that's rough,
and the better builders would analyze the crystals. You have
the reverse problem; you'll have to figure out the spacing before
you order.

One thing, as someone else mentioned back in July. The simplest
solution would be one half-lattice filter, ie two crystals. The

selectivity would be the same as two cascaded sections, but the shape facter would not be as good. It would be cheaper, but if you find the results less than satisfactory, you may have been better off ordering 4 crystals at the same time, rather than risk the second two not matching the first.

The component values will depend on the filter. The input and output load is going to impact on the filter.

Michael VE2BVW

Your comments are not neccesarily correct. Pick any crystal filter frequency
that you want. Then put a mixer on each end of the filter. Build an
injection oscillator having a frequency that will take the IF to the xtal
filter frequency at the input end. Take another output of the same oscillator,
to the output mixer to take the signal back to the IF frequency.

You can use a xtal osc. for the injection oscillator, but if you make it
variable. you get the bonus of getting bandpass tuning and variable IF
bandwidth control at no additional cost.

Don

Hi Pete,
thanks for the info. It has the original mech filters for ssb in both the A and B
IFchannels. I have extracts of an 8054 manual (enough to find the dead tantalums)
and it shows an optional filter board that can be used. Unsure if this was available
for the 8050a.
I have to admit, I like to "scan" and the thumbwheels are a let down, apart from that
a very nice RX.
However I will let it go, I have drake R8 and that isnt too bad either, more suited to
my use, and especially if I can get that much for it.

Thanks again for your input.

If it is working properly, it is worth around $3500. This would be the ball park, if you had the 6kHz and the SSB filters. When I was working at Rockwell-Collins, it was my understanding that they were selling these units refurbed for around $30,000 to $40,000. I picked up a few incomplete HF8054s and HF8010s from the Rockwell Inventory Disposal a few years ago for $5 apiece. I ended up giving them to one of the old timers at Rockwell before we moved back to Chicago. He eventually did get one of them running. The general opinion seems to be that the HF80 series are the best thing that Rockwell-Collins ever put out, bar none. The 851S-1 was an upgraded HF80, using an optical encoder for tuning, instead of the thumbwheels. They had a couple of the 851S-1s in the service center at Rockwell, along with an even rarer receiver, the 451S-1. That was one nice thing about working over there; I got to play with some pretty cool equipment.
On a final note.....I would probably keep that 8050; it is a great receiver!

You call QMX Crystals in Texas and tell them what frequency and what
resonance and what load capacitance. You give them a credit card.
Crystals arrive.

ICM also makes excellent crystals but for a lot more than QMX charges.

And then you'd better be sure that you've picked the frequencies of
the new filter and the oscillator so it won't cause problems elsewhere
in the receiver. And you'd better make sure that the added mixers won't
overload much, and the whole thing doesn't add overall gain to the signal
chain.

My point was that the original poster needs to understand the circuit
and what the components are doing before ordering crystals. And costly
as buying crystals may be, it ultimately is a better solution than
adding two whole extra mixer stages (and an oscillator) to a receiver
simply because a filter of suitable bandwidth is on another frequency
than the present IF.

I beg your Pardon?

The Heath SS-9000, and probably most other radios with IF shift controls
do pretty much as you describe. You aren't breaking any new ground here!

What the designers of these radios (with IF shift's) did is analyze the
various sources and calculate the mixer products, and hopefully place them
where they wouldn't be noticed. DID YOU?

Heath did a fair to poor job of making sure that their receivers were free
of internally generated spurs. Your adding yet another IF frequency, and yet
another VFO will certainly add more spurs to a radio that already has
more than a few doozies.

As to my operating preferences, etc. I haven't used my license for rag
chewing for nearly 20 years. Can't find anyone I want to chat with all
that much. After nearly 30 years as a Ham, I am not sure that I will
bother to renew in '04 when my ticket comes due.

73,

Chuck

I have acquired a dealers remanent of an IRC snaptrol kit. This kit is called the DS-25 Master Packer and I have six of the 24 drawer cabinets (I suspect the complete set had more than six cabinets).

If this would be of use to anone I am willing to enter into a discussion on trade or sale (read this as saying I have no idea of what it is worth to sell). If there is no interest here I'll put it up on that E site to see if anyone is interested.

The approxiamte units left in the kit are
CR sections 140
CR-T 35
CF 60
CF-T 4
Bias Control 10
WF 10
WFT 3
WR 4
Numerous bushings and shafts
Limited number of switches

If you are interested contact me and we can discuss, but please have some idea of what it is worth to you.

Jim

Re, Chuck's comment.... "After nearly 30 years as a Ham, I am not sure that I will
bother to renew in '04 when my ticket comes due."

May I suggest you renew it even if you believe you will not use it right now? I let my license go for a second time in the 70s. Now, however, I have some interest again and am preparing to re-license again. It's worth having the license just to be able to test things on the air instead of to a dummy load..... and you never know when you might change your mind.

I am selling a hard to find Bird model #74 6 position "N" connector coax switch, called the COAXWITCH. Designed for commercial service. Has minimal insertion loss. Pull out, turn and push in type switch handle. Sure locking and tight connection. It is new and unused in original box and packing with instructions.

Pictures at:
http://mywebpages.comcast.net/mnowlen/bird-74-front.jpg
http://mywebpages.comcast.net/mnowlen/bird-74-back.jpg
The cardboard is part of the packing and has never been removed.

Useful Freq Range: DC to 10 GHz
Max RF Voltage: 500 VRMS (Note: this is 5KW at 50 ohms)
Atten to unused Channel: 75dB

Frequency VSWR Loss (dB) Max RF Power Rating (Watts)
100 MHz - 0.02 850
1 GHz 1.06 0.09 200
4 GHz 1.3 0.22 75

Original cost is near $500.

$175 + Shipping

Figure Shipping Wt @ 5 lbs from zip 20191
I ship via USPS or FedEx. FedEx Ground is usually the least expensive.

Shipping Estimates avail at
http://www.usps.com
http://www.fedex.com

or email me with location and zip code.

Thanks for reading.

Well, you can always buy random crystals at hamfests, then open up the
cover, remove the element, and polish it down with jeweler's rouge and
Comet cleanser to get it up in frequency to where you want it. You can
skew quite a bit.

The last time I did this, my mom got very angry about my making a mess in
the sink, though. Now that it's, well, more than a couple decades later,
I can afford to spend $15 each for custom cut crystals.

Source record: 38714

> I am trying to locate a fine old receiver, the National NC-240D.

Martyn,

If you find a receiver without a speaker let me know,
I have a speaker for the NC-240d that's for sale.
It will also work with the NC-200, the only difference
is when it's used with 240D it has metal feet and with
the NC-200 the feet are removed.

It's in nice shape, good original paint and grill cloth.
There is a small chip out of one of the feet on the back
of the speaker.

Price is $150 plus shipping.

73, Ron KC4YOY

The price was in the post, third paragraph from the end. Here is a copy:

--------quote of post---------------
From arthures@magpage.com Sat Sep 14 08:46:11 2002
Date: 14 Sep 2002 02:28:51 GMT
From: Arthur E. Sowers <arthures@magpage.com>
Newsgroups: rec.radio.amateur.boatanchors
Subject: (attached jpg) F.S. 12 vdc Dow Key coax antenna relay

The attached jpeg file is of one of two Dow Key coax antenna relays for sale.

The label says Dow Key Microwave and the number stamped in the box under the logo is "9051" and to the right, the P/N stamped into the box is 60-2204. The rest of the label says "Coaxial RF & Microwave Switches, FSCM 00471, Ventura, CA, USA."

All the connectors are SO-239 and there is a slight bit of tarnish where the metal was not covered by a coax connector. There is no corrosion or rust anywhere else. I have not looked inside, but last time I activated the relays, they made and broke connections as they were supposed to. They never had high power levels of RF going through them.

They were never stored in a place where temp moved over extreem ranges or humidity ranged very high or low.

There are short lengths of wire soldered to the terminals (The white plastic insulation posts surrounding the terminals are sometimes subject to melting if your soldering iron temperature is high). These relays were used very very very little. They are DC, not AC, and if you look at the metal cover on the solenoid, it says "12 VDC" and they do work on DC (you may appreciate this if you ever had AC relays that chattered and hummed all the time).

They were purchased at full list price (can't remember but it was a lot) back about ten years ago.

I have two of them. Both are for sale. Depending on interest, I may be willing to sell just one but prefer to sell both to the same party (in the interests of keeping shipping simplified).

Price to you: $20/each, $39 for both, plus shipping (USA only, USPO money order only). Net weight about 1/4 pound/each. Packing may add another 1/4 lb/each.

Please indicate your interest AND name and mailing address in first email, and any special or preferred shipping method if other than US PO priority mail or flat rate (whichever is cheaper).

Please, only contact me by email.

writes:

>Having said that, the value of a 75A4 is in the eye of the beholder. I had
>one for a number of years and did not really like it.

I had a 75A4 that I bought back around 1965/6 at the Greyslake, IL hamfest for
$675. It had the stock AM and SSB filters. I paid quite a bit more later to
add the CW filter. While it was a nice RX to operate, with good freq readout,
it never struck me as very sensitive or "hot." And the audio wasn't all that
crisp, either on SSB or AM. I really intended to use it for CW.

I liked the passband shift tuning, but I had and still have a Drake R4 that
does the same thing for a fraction of the cost/size/weight. Of course it was
fun to tune the passband and show people the whole PTO assembly rocking back
and forth like a drunk in a rowboat.

A K6 offered me $1200 for the set, so I jumped on that. It turns out there is
a fairly standard, accepted set of mods done to the front end (different tubes,
complete rewiring of sockets, new R values) that really jazzes the sensitivity.
I didn't feel like doing the mods right away, certainly not whne the buyer was
willing to.

So if you want to *use* an A4, do the mods. Oh yes, there are audio section
mods too.

BTW, I still have a 51J3 (388?) and it isn't all that "hot" either. A good
radio otherwise. And Collins could have used a flywheel in the tuning.

Just got one of these to restore. This is the second one I have seen
in the UK and both had had their CRT assemblies removed so making
a replacement seems a place to start. Condition otherwise seems fair
and should subject to a few repairs and a case repaint be reasonable.
Also missing audio clipper plug in (bypassed) and PA compartment top.
Anybody know if there any acknowledged experts on these on the web.
I have a (poorish) copy manual.

Jonathan Butler G4JOW.

Speaking of the Texas, there will be a living history weekend there the
weekend of Sept 20th. We will be having reenactors from both sides of WWII
in and around the ship. There will be gun drills onboard, treating of
"wounded" and processing of prisoners.

The Texas is the only battlewagon to survive from WWI and WWII. She was the
flagship for the Normandy invasion as well.

Barry,

I don't see any carbon composition resistors being sold by any vendors.
If it says "film", it isn't the old style carbon composition style which
looks
proper in an older chassis.

The bank could be giving you a hard time because the western union money orders are probably a lot cheaper then what the bank gets for their own money order. That way they give you a reason to use their money order next time.

Doesn't US Postal Money orders charge a fixed rate? Therefot if you are send a small amount of money you pay more for the money order than the amount that you are sending.
I needed an international money order for a few dollars one time and the money order cost me more than I was sending.

Mouser indeed has carbon comps, 1/4 and 1/2 watt only. Look up p/n
30BJ500-470k for example.

Hi Bill

I did a search on their website for carbon comps and all that
came back were film styles. I'll try again...

Pete

Hi,

Anyone have an SP600 meter (dark burt orange color dialface) for sale?
The windings on mine just opened up.

Thanks,
Gary

1916. FS;Yaesu FR101SD

Newsgroup: rec.radio.amateur.boatanchors

Just received this in a trade and need to pass on. A working FR101SD
receiver with 80, 40, 20, 15, CB, and all 4 10 meter xtals on board.. You
can add 160, 60, 31, 25, 19, 16, 13, 11, meter and four other xtals if you
want.
Has some small chips in the paint, however not to bad. A money order for
$165
plus shipping in conus only. If you are interested, please e-mail me direct.
Tnx----Doug ddswl@centurytel.net

Pete,

As others have stated, Mouser does indeed have 1/2-watt and 1-watt carbon comp resistors. I have bought them and they are indeed carbon comp -- not carbon film (they have those too). I haven't priced them against SurplusSales, but I'll bet they're much cheaper.

Good luck.

FOR SALE - Several Heathkit items:

Heath SB-610 monitor scope for the SB-series rigs. Front panel looks
excellent with all original knobs. Everything is there inside. Outer
case has a few paint chips as is common for these items. Sold as-is
for $65.00 plus shipping.

Turner 350 mobile microphone ceramic hi-impedance, like new,
with original box.
Great hand mic for use with any tube transmitter or transceiver.
Also comes with original owners manual and warranty card.
Very nice condition with coil cord, PTT etc.
Same mic as used on the Heath HW-12 series only white.
Will sell for $30.00

Astatic D104 desk microphone in nice condition. Non-amplified type.
Nice felt on the bottom. Base could maybe use repaint but not bad.
Comes with a nice coiled cord and the Heath type two prong
plug attached and ready to go. Will sell for $40.00

Heath RF-1 signal generator with both cables for RF and modulation.
Excellent condition $25.00

Heath AF-9A Audio Signal generator in excellent condition $25.00

James Millen Company Grid Dip Meter.
Model 90651 GDO mint in the original Millen carry case.
Best looking one you will find anywhere.
Available for $125.00

Shipping additional on everything.

E-mail me to arrange purchase.

FS CERAMIC/WIRE WOUND RESISTORS
I have a nice lot of 75 wire wound/ceramic resistors. They are
different values and wattages. All checked and marked. this is for the
whole lot.
They are all pretty good size,high wattages. Just what you need
for a good stout amp.
i have a pic.
30.00 + shipping or make me a offer.

FS 2 BIG Neutralizing Capacitors
Two neutralizing capacitors for controling the stability of that
big amplifier project your planning, These are VERY NICE AND BIG.

Capacitors stand 6" high and disk diameter is 2". Both caps are in
very good condition and I would rate at a 8+. There are no pits on the
aluminum or chips on the ceramic.
20.00 each +shipping

1945. ME-297 Battery Info Help ?

Newsgroup: rec.radio.amateur.boatanchors

From: Michael Melland <w9wis@charter.net>
Message-ID: <uo9gmucemnmu71@corp.supernews.com>
Source record: 38618

I just received a NIB AN/USM-223 (ME-297) FET multimeter.

I know that the six original mercury batteries (BA1312=NEDA1100= 1.35v Eveready E1 cells) are no longer obtainable.

I've been told that on later ME-297's the military switched to 2 ea 4.5v Energizer 523's after some sort of modification..... and that there is another mod to allow use of ordinary alkaline AA cells.

Anyone know what I need to do to use the Energizer 523's or AA's ?

Thanks,

Mike

Not really a boat anchor, but I thought the people here might have an idea of what's liable to go on old clobber.

I bought a Roberts RM50 (1976 according to google) radio today, and whatever band or input it is
switched to, the radio only produces a loud buzz. The volume is constant irrespective of the volume control setting. I'd be grateful for any pointers on what might be up with it. It's a low buzz, (not sure if it's 50Hz or not - 50Hz is UK mains electricity frequency for any Americans wondering why I'm on about it).

Source record: 38626

I've had one for several years. Had to replace only the red test lead, it was brittle and cracking, no problem with the black lead. Here is what I did that requires NO modification at all to the meter.
I use a CR-1 / 3N 3-volt cell and a 1.5-volt Alkaline "N" cell for each side. I machined a small aluminum spacer to increase the length for a snug fit. Place all three items observing correct polarity inside a piece of tubing, I used heat shrink tubing, and place in position. I placed a small piece of thin foam on top to help keep it in place. Replace the cover. Work fine, last long time. It takes longer to describe than to do.

Downside: You do have to fiddle with both Ohms adjustments when changing ranges. Accuracy seems to be within original spec.

1954. FS: SWAN 14X DC Supply for Swan AC 117X Series supplies

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-15 21:38:43 UTC
From: Larry Johnson <larryj@teleport.com>
Message-ID: <3D84FD04.ED4A722F@teleport.com>
Source record: 38627
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

FS: Swan 14X DC Supply. No model number is shown on this supply, but looking at the "Swan Universal Power Supplies" manual, it appears to be a 14X Supply. It converts a Swan 117X, 117XC or 230XC to 12 volts DC.

From the manual:

"A DC Module attaches to the back of the AC supply, and converts it for 12 volts DC input. The model 14-X DC Module is for negative ground systems. The matching AC supply, model 117-XC or 230-XC, may be converted easily to 12 volts input by attaching the 14-X DC module to the back. This provides for portable or emergency operation from a 12 volt battery. There may also be times when it will be desirable to operate temporarily in an automobile such as during a vacation trip, field day, or emergencies. The 117-XC can be set on the floor or front seat, and with the 14-X attached it becomes a 12-volt power supply, complete with speaker."

This unit appears to be in good condition, but I don't have a Swan/supply to test it out. $25 plus $8.50 shipping CONUS. A copy of the manual with schematic and installation info is included.

Larry

1955. Re: recommended preamp?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-15 22:37:41 UTC
From: AJ Sanderson <ajsand@nospam.com>
Message-ID: <am32k1$cm5$1@slb5.atl.mindspring.net>
Source record: 38628
Cross-posted to: alt.ham-radio.mods,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Actually, I was off on my initial 8-12 dB loss. It is more like 4-6 dB. The in-line device is an interference canceller, similar to the MFJ model, except home brewed. There is some loss, but I found that the orientation of the noise antenna makes a difference in the amount of total loss. It seems to work great on computer screen noise, but the power line noise I really wanted to eliminate is not even touched. Maybe the noise is too broadbanded (when the noise occurs I can hear it on all the Ham bands) . The Icom blanker won't eliminate it either, but the noise blanker in an HTX-100 10 meter rig eliminates it almost completely! I agree with posters that a preamp would definitely do more harm than good. However, my immediate goal is to get rid of this noise!

Anyone the newsgroup trolls disagree with.

They will argue that it is an "illegal CBer", but they attach the label
quite freely to anyone who disagrees with their antisocial tactics within a
newsgroup.
LEGAL CBers and radio Amateurs have often been given the label "keyclown".

You will notice that the post makes accusations of pimping and drug use, and
is nothing more than a string of insults hurled at anyone who will take the
time to read it.
Some "antikeyclowns" have even been caught promoting illegal activity
themselves, which leads me to believe that their whole "pro-legal" stance
is fake, they just want to cause arguments on newsgroups. One of them has
made several attempts to spread the anger to a UK group, but has just been
blocked by most of the users.

Regards,

Peter.

1957. Vibroplex Weights

Anytime! That is a very good receiver; if I didn't have several other
receivers already, I would definitely buy it. My "favorite of the moment"
is my Racal 6790/GM.
Good luck on your sale.

Pete

They seem to vary from sample to sample. I've had both 75A-4s and the R-388 series of receivers. Some of them had an MDS of less than .1uV, while others were "deaf" until you injected a 2uV signal. This was after alignment. I don't know if it was the cathode resistors changing value over the years or not. I have done some refurbs on old tube equipment, including changing the old bypass caps, and changed value resistors, with good results.
I remember reading an article about the R-388 series several years ago, whereby the author informed that one of the resistors in the voltage divider for the AGC circuit would change value. That alone could make the receiver dead above 15MHz. One clue to this problem would be if the gain increases, when turning the I.F. gain control down. You could actually "peak" that gain in this manner.

The noise eliminator should wipe out power line noise as well - assuming
that the source is close enough that it can be received by your sense
antenna.

If it can, then you must be doing something wrong in adjusting either
your phase or gain of the inverted signal.

You may view most of the equipment on my web page....

http://radioleo.tripod.com/leo/

THIS IS A NEW POST !!!!!!!!!!!!!!!!!!!! NOW PRICED SEPARATELY...

I have a list of some NEW goodies, hope you like them.................

Yaesu FT-102 Transceiver, & Yaesu MD-1B8 Desk Microphone...$460.00

Yaesu FV-102DM External VFO...........$175.00 SOLD.......

Yaesu FC-102 Antenna Tuner.................$175.00 SOLD.......

Yaesu SP-102P Phone Patch/Speaker.....$100.00

Yaesu FT-757GX II Transceiver
Yaesu FRB-757 Amp/Relay.........$425.00

Yaesu FT-707 Transceiver, hand microphone $285.00

Yaesu FC-707 Antenna Tuner...........$150.00

Yaesu "Brand New In The Box" FV-707DM External VFO...$175.00

Yaesu "Brand New In The Box" MR-7 Rack for the FT-707....$39.00

Yaesu "Brand New In The Box" FRB-707 Amp/Relay.........$50.00

Yaesu FT-480R 2 Meter All Mode Transceiver........$275.00

Yaesu YS-2000 FT-101 Matching SWR/Power Meter.......$90.00...SOLD

Yaesu YO-101 FT-101 Matching Scope........$80.00 ...SOLD

Yaesu FV-101Z FT-101ZD Matching External VFO.........$100.00

Yaesu FF-501 TVI Filter.............$20.00

(2) Yaesu Landliner Speaker/Phone Patch........$50.00 each

Nye - Viking MB-V-A 3000 Watt Antenna Tuner.........$500.00

" It sells NEW for about $900.00"

Ten Tec Model 4229 Antenna Tuner $170.00

Henry 2K Classic Console Amplifier 10,15,20,40,80 meters.........$975.00
Pick Up Only in Los Angeles........
"It sells NEW for about... $2000.00"

Heathkit SB-221 Amplifier.....$525.00
10-80 meters, nice condition

PAL 120+ 12 Volt Tube Amplifier.....$99.00

PAL KW-1 SWR/Watt Meter.....$40.00

Heathkit SB-614 Scope.....$100.00

Mirage B-108 2 Meter Amplifier 10 watts in 80 watts out.....$75.00

Bird # 43 Wattmeter.....$175.00
"It sells new for $309.00"

Bird 100C 100 Watt Element for 100 - 250 MHz.....$50.00

Bird 250H 250 Watt Element for 2 - 30 MHz.....$50.00

Bird 1000H 1000 Watt Element for 2 - 30 MHz $70.00

Bencher Keyer BY-2.....$70.00
"It sell NEW for $125.00"

Ham Key $40.00

"New In The Box" Alliance Rotor.....$90.00

Astron RS-35M 35 Amp 12 Volt Regulated Power Supply With
Meters.....$90.00

AEA MM-3 Morse Machine, Original box, and Manual.....$80.00

MFJ - 1278 TNC.....$99.00

(2) MFJ-1272B TNC/MIC Switch.....$10.00 each

Heil HM-10-5 Desk Microphone Wired For Yaesu.....$70.00

Gallon Dummyload.....$20.00

> antenna.

I can eliminate computer and monitor noise completely, but it won't touch the power line noise. Of course, I've only been using a 5 foot piece of wire as the cancelling antenna. Perhaps if I went with a larger antenna, I might get results but then I don't want to start cancelling the signals I want to receive.

> If it can't, then you must be doing something wrong in adjusting either
> your phase or gain of the inverted signal.

The power line noise is apparently some distance away because no adjustment will affect it.

Yep, Macservice had some of these a while back for $1K, and they dont let
anything go cheap.
They come up from time to time at RAAF Auctions for around $300-$600 as-is

Hi,
where were these comments when I sought a market value a week back? The only response I got was a fellow in the US who indicated a value of US$3750. Given I had heard of these selling for up to US$5k I took that as market then dropped a little off.

So what do you reckon is a realistic market value?

1975. Ebay question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-16 10:35:15 UTC
From: "Joe S." <joe@schlatter.org>
Message-ID: <am4c7k02iuk@enews2.newsguy.com>
Source record: 38546

The following may be sour grapes on my part -- but -- here goes.

I am a novice on Ebay and have a question about how it operates.

I have recently bid and lost on a ham radio item (twice) and on a book.

The ham radio item is a small accessory that I really do need. I asked a few experts and determined that a good price would be $75.00, $100.00 if I were desperate. I watched Ebay for four months and did not see one.

Then, a month ago, one appeared. I bid, was outbid, and bid again. I was the high bidder until literally the last minute when an individual who had not bid previously outbid me. Oh well, I figured, luck of the draw.

Two days later, an identical item appeared, offered by another seller. Same thing happened. I was the winning bidder up to the last minute. Only this time, I was ready. My bid was $100.00; at the last minute, a bid of $102.50 popped up from an individual who had not bid before. I was able to put in a bid of $125.00 -- it was not enough and I lost.

The same thing happened to me on a book that I wanted. In this case, while the ham radio item was somewhat rare, the book was not -- there are several of them on Ebay right now. I bid what I thought was an outrageously high bid -- I was the winner until the last minute when someone who had not bid previously won the item.

Is this just the luck of the bid?? OR, is there a function on Ebay where a buyer can say "I want this, I'll pay anything, make me the winner no matter what."?

Just wondering.

--

Regards,
Joe S.

hey joe
i think there is software out that works with ebay to allow someone to watch and
auto bid on items
this is one reason i dont use ebay i would rather see a listing on a webpage or
new group and give the guy what he is asking
than play the bidding game
i dont know how well it would work if you did the "buy it now" feature on ebay
but if i where you i would go to www.qth.com or www.qrz.com or www.vhamfest.com
orwww.eham.net
all of these places have free online classifieds and look around or place an ad
for what your wanting
good luck

1981. Fs: Heath ham station, Hammarlund, manuals, more

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-16 12:49:56 UTC
From: kilokat7 <"Kilokat7 at BulbCollector dot com">
Message-ID: <uobkpkg4ft6rca@corp.supernews.com>
Source record: 38554

For Sale: Boatanchors Galore

Complete vintage matching Heath Ham station consisting of the following:

-Heathkit Apache model TX-1 HF transmitter. Physical condition good with very minor paint flaws on top of perforated metal case. Face plate is nice but appears to be missing dial glass however this may be dislodged inside the cabinet. Power cord is cut, all tubes are present, microphone jack replaced with mini jack - should be replaced. Operating condition unknown, does not appear to be any mods done to the transmitter except for the mike jack but then again I've never it apart. Overall a very nice and clean Apache that probably doesn't require much to be put back into action.

-Heathkit Mohawk RX-1 HF receiver. Receiver is in nice clean operating condition, good faceplate, paint, etc. Receiver has been modified with an external non-documented power supply that is connected to the unit via heavy duty Amphenol plug and socket.

-Heathkit SB-1 (think that's the correct #) single sideband (SSB) adapter unit. Unit is in very clean condition with original patch cord to mate to the TX-1. Operational condition unknown, looks like new.

-Heath matching wood speaker, painted in the same two tone green color scheme, good paint, works fine.

-(3) original and (1) copied Heath manuals will be included for the receiver, transmitter, and side band adapter as well as a large schematic and parts layout of the Apache.

These were purchased locally with the intent of getting into amateur radio. Time and space now prevent me from pursuing this interest. Asking $450.00 for all listed above, too heavy and cumbersome to ship, pickup only at my house located in West Michigan, three hours NW of Detroit or 3 hours N of Chicago.

I also have a Hammarlund #105-TR in clean but unworking condition with Hammarlund matching speaker, Hammerlund crystal CB channel switching unit, and original service/operating manual. This is a communications receiver with a "built-in" CB transmitter. The channels are controlled by the crystal unit. All for $100, pickup only, will not ship.

Also of interest, an original Heath DX-60 transmitter condensed manual, will sell for $15 shipping included. I also have a rough photocopy of a Hallicrafters HT-9 transmitter manual, free to anyone who wants it. Just mail me a self addressed double stamped envelope to the address below, email me first though to verify I still have it at the email address shown below. Last but not least, a Sams Photofact Folder for a Hallicrafters 30-50 Mhz

S-82 receiver, $10 including shipping to anyone interested.

Last, I have a National NC-173 communications receiver, unworking, missing bottom cover plate, needing new paint but definitely restorable, for $30 pickup only.

Detailed pictures of all above items are available upon request, don't hesitate to email questions. Thanks for reading.

This is a physically nice looking vintage SSB exciter and it is very original. There is a partial manual with it. It came from an estate sale and has not been tested but is complete and original inside and out. Price: $110.

Well Brain since you have only been around for a
short while I'll fill you in. The "Keyclownbuster" is a
Ham named Doug Adair N8WWM. He was flooding
the newsgroup a year or so back on a daily basis with
the same foul language accusation and insults. He has
lost his AOL account, Concentric, UUnet now he's
working on another one.
Now what I find strange is, that Doug and a couple
of others are ham operators, now just because they are
hams doesn't mean that they are morally right, but they
wouldn't and couldn't talk like this on the ham bands, let
alone on the cb or for that fact in person.

Joe,
On a popular item it really doesn't do much good to bid until the last minute. Your 'competition' can see your bid and simply outbid you. All the action takes place in the last minute, or last few seconds on a desirable item and thats why esnipe is so popular. Let it do its work and go off and do something else.
There's no luck in the bidding. It always boils down to who will pay the most.
-Bill

Joe,

It's called sniping, and it's legal and happens all over the world
in auctions. You can do it with software, or just be patient and
bid at the last minute.

Bottom line - you MUST bid the MOST YOU WANT EVER
TO PAY... That means if you REALLY want it, bid accordingly
at the last possible minute. If the item is at $100, and you MUST
HAVE it, bit say $250. Chances are you'll get it. But if someone
'under you' is sniping it at $260 you'll LOSE. And if they snipe
it at $245, YOU will have to buy it at about $250 - the amount
of your high bid.

Nothing magic, nothing illegal. Just how auctions have always
worked since they began. "If ya can't stand the heat...." seems
to apply here.

Good luck.

David

Joe
The first reply was right on. E bay is a huge market remember that.
If you really need the item then you must sit there and be prepared
to enter a bid at the last minute.

May I suggest you post a WTB item in this/or appropriate NG for the item
desired.
Lots of people read these and you might go as far as setting a price
you are willing to pay. Very likely you will get a response.
Also if it's an older manufacturer then sign up on that list at QSL.NET
and
post a want. Might be more efficent .

Got a unit that has a fried xformer and doubt If I can find
one priced reasonably.
However, I wondered about rewinding it. Never did that and
am curious if anybody has done it recently. Years ago it
was fairly common.
Any good reference books on the subject and especially wonder
about material sources proper copper wire and winding insulation .
Any ideas where to start? If you can reply direct do so please
Tnx

Source record: 38565

Joe,

The same thing used to happen to me all the time. Now, if I really want something, I try to find it at a decent "buy-it-now" price or email the seller BEFORE any bids are placed, and ask him how much he wants (if "buy-it-now" isn't offered). I find that there is a 50/50 chance that I will get the item I want using these methods, which is a lot better than the 1/1000 chance I'll get it in an outbid war! Of course, the disadvantage is that the seller will ask the highest amount possible for the item and he knows you'll pay it if you really want it, but that's the way it goes I guess. Also, sometimes there is an alternative to Ebay called "search engine finding". I know it sounds silly, but using the common net search engines (or even some of the not-so-common ones), you can many times find the item you're looking for at a very reasonable price and skip Ebay altogether. It can take a LOT of patience to find an item this way, but it's worth it. I especially do this with books and Amazon will pay off many times!

Oh well, sorry to ramble, but this is just my two cents...

AJ

You'll find that posting wants on these groups brings out more greed
than you will ever see on eBay. I posted for a Heath QF1 Q-multiplier
once, and got offers all well OVER twice the going prices on eBay!

EBay has bargains, you have to patient and play the game. There's
always another one out there.

Pete

> Must be in very good condition and work properly. Larry WA2PZI

I don't think an SB-303 exists in excellent condition. I've been buying and restoring them. I own 5 now.

There's two problems. The big one is the LMO drive. I've gotten two radios to the point that the LMO drive feels right, very smooth but Heath's design is flawed. The LMO drive needs shims or thrust bearings to keep you from applying pressure to the drive ring which puts stress fractures on the dial.

The second problem is cosmetics of the front panel. Some of my SB-303's show wear on the lettering. In one case, the letters are oxidized and show cracks when you look at them closely.

I'm trying to bring these to better than display models but it is slow going and I only have a couple hours a week to devote to the radios.

I will be looking for project radios with all filters to bring back to life. I don't need any now as I am booked up.

2003. FT: Hallicrafters SX-101X

I have a Hallicrafters SX-101A reciever. Was a mate to a HT-37.
Good points:..100% electrical. Receives well on all bands. USB/LSB/AM/CW. No problems. Cabinet is in very good condition. No dents or dings. Front panel in very good shape, markings sharp and clear. Overall a nice looking receiver.
Bad Points: 6.3 lamp burned out in the 20 meter segment of the dail. I may have a replacement. I have'nt looked in my junk box. The front mounting screws is missing. I think I have them in the same junk box but not sure. The cabinet has been repainted a gray and not the Hallicrafters original black. There is a retaining ring missing from the AVC switch. Should be an easy replacement.
The "pointer reset" and the "notch depth" knobs are not original but a good replacement and looks good. The original knob "cracked".
I have discribed it to the best of my ability.
I am looking for an AM transmitter. 50-150 watt range.
If your interested contact josuha@charter.net

Thanks to all who responded -- VERY helpful.

I am looking for an AM crystal filter for my Heath SB-303.

I'll visit www.esnipe.com as well as the other sites suggested -- and I'll
be patient.

Right now, I am homebrewing a filter but I still want the original Heath
filter.

Thanks again.

eBay is an open auction that millions of people participate in.
This means that when something sells on eBay, it sells for the
absolutely highest price that anyone, anywhere is willing to pay at
that moment in time.

The stuff about sniping is just baloney and sour grapes. The fact is,
the item sells for top dollar no matter how the game is played. No
matter how you play it.

When I wanted an SB-200, I put in a very high bid, $350, and got it.

When I wanted an SB-104A, I did the same thing. Later I sort-of wanted a second SB-104a and bid medium. Didn't get it, even though I was bidding for real and up to a fair amount.

Prices are soft now. The depression that started on January 14, 2000 is in full swing and lots of folk are dumping their toys for cash.

The nature of a giant auction means that the prices are as high as anyone anywhere is willing to pay.

In the last 6 months, I have purchased a dozen items, the SB-200, SB-104A, 4 SB-303's, a Tektronix LCD dual trace digital storage oscilloscope, a couple Heath extender boards, an SB-102, some manuals, parts. The total amount is well under $2,000. More than half of that is in the Tek and the SB-200.

I don't mind paying $150 for a working solid state SSB receiver that cost $389 in 1970 for a box of parts.

At some point, I might be selling these radios back through eBay. At that time, I expect that someone will pay me the highest price anyone, anywhere is willing to pay for the item. That's only fair.

Many times the deal goes bad. I've been following Heath sales and have seen the same items show up again. I have also been contacted by sellers to take items that the high bidder declined. Some folk get carried away by the bidding process and end up legally bound to buy something that they're not sure they want.

As a bidder, I also play a game with the other bidders. Many people believe that others bid to even numbers such as 100, 150, 200. Believing this, they will bid or set their proxies to 101.25 or 200.75 to just edge out the competition.

Since I frequently bid early and high, I sometimes see others "feeling out" my bid. For example, a fair price for a nice SB-102 with HP23 PS and SB-600 speaker might be $200. Some folk might proxy bid $200.50.

I've seen others bidding 166, 171, 181, trying to edge above me.

I don't bid 200.50. I bid 197. What happens then is that someone else wins the bid but they pay top dollar. I win fewer items but tend to pay less than average. All that means is that I have to participate in more auctions.

Since the "round number" for an SB-102 w/ PS is about $200. If there is a bidding war, hey, YOU can have it.

If it turns out that $197 is a winning bid, very likely no one has run the price up anywhere near close to $200. Very likely, I'll get it for $150.

It's strategy.

Odd numbers on the high side of the "round number" wins more bids but tends to pay much more than odd numbers on the low side of the "round

number".

Odd numbers on the low side win far fewer bids but when they do, it's because no one else was bidding.

The reason to set the number close to the "round number" is that if the SB-102 w/ PS is about to close at $110, guaranteed that someone will try to steal it for 115, 121, 126, 131, near the last minute.

In that case, my proxy of 197 will dishearten them.

You're not going to "steal" an item, such as an SB-102 W/PS for half price. There are enough bottom feeders (and shills) around to prevent that. You can get bargains if you are patient but expect to pay a fair price.

My drake r4c was working just fine and the next time I turn it on the volume needs to be turned up to the max to hear the strongest CW stations. Sounds better in SSB and AM but is deaf on CW. The CW filter in the radio is the .5mhz. WHen the volume is up, you hear a loud hum...

Any ideas??

Do the cw filters ever go belly up?

Please email me directly at paul.werfel@stonybrook.edu

Hello,

I've just acquired a RME-69 receiver with an external speaker.
The radio itself is in great shape, but the speaker needs to
be refinished, having been repainted several times over the
years.

Can anyone tell me what the original color of the speaker was?
Better yet, any pictures of one on the web?

Thanks!

Dan

hi... mitch, w4oa here at vibroplex...

we have weights! square, round, large, small....

but... there is no weight that i know of that will slow a bug
down to ~5 wpm... for that you need our vari-speed
or bug tamer... but even those items will only slow a
bug to ~10-15 wpm... the reason???? well, the bug
was designed to start where a hand key leaves
off, at about 15-20 wpm...

check our website out... www.vibroplex.com we have
parts lists for most of the more popular bugs, and of
course for our current production models...

Perhaps you have some comments.

I have a half dozen SB's and they all feel different. They range from horrible through pretty-bad to absolutely perfect. The absolutely perfect might be a fluke but here's what I did (it took a day).

I removed the plastic dial and cleaned it and the drive washers, paying attention to get dirt and grit out. I spun the washers on clean paper. I used light oil as a cleaning solution.

It seems wrong but I oiled the drive washers.

I aligned the plastic dial, fore and aft. Too far forward and it binds on the hairline. Too far aft (toward the LMO) and the pointer follower drags on the spiral. Strangely, on some radios, it both binds and drags!

With the panel assembled, I engaged the drive washers and the plastic dial. Nope. Slipping.

I tried again, a little more pressure. Nope, it's hard to turn, stiff.

I tried again and a again, aware that each time I did that, it was putting stress on the plastic dial and possibly deforming the drive ring.

Then one time, it was perfect. Locked it down. Done.

The feel is like oil on glass, very light. I also have a weighted heathkit knob that someone made. It adds a nice flywheel effect.

seriously
> about replacing some power supply capacitors.

Duff PSU caps would give a 120Hz hum on all modes. Have a look at the mode switch. If a tube or high-impedance audio amplifier input becomes open (unterminated) then it picks up all manner of crap that is floating about.

The filters should not go tit's up without something happening to them.

Electronic components rarely just pack in for no reason at all. It is nearly always the mechanical joints that fail: Connectors, switches, relays, plug-in contacts, PCB edge-connectors, tube pins, sockets and sliders. Anything that is wiggled by the operator also has a high failure rate, this includes plugs, switches and sliders.

Try applying a gentle shock (light tap) to different points of the chassis, especially near any mechanical device. Wiggle any tubes, connectors, knobs and other pushy-things; see if the sensitivity comes back.

Even if you are not a wireless engineer, most people can localize more than 70% of faults with a little thought and a few minutes without getting mad at it!

I have had problems with the Mode Switch in the 1.5 position. All other positions were fine, but little or no signal in the 1.5 position. Cured with a dose of DeOxit. Same for the Band Switch. I've never seen a xtal filter in a Drake fail in normal use. It might be several minor problems including PS filters if the hum is bad and always present.

> http://www.hammarlund.info/

I think you are right! The broken meter is the same color as on my HQ-120. There were a lot of curious other things about this SP600 unit, including a very messy 51Mc bolt on fixed osc(?) The original tech's notes from 1962 were in the manual. Back in '62, he had mis-reinstalled the fixed osc, reversing the 150V and switched 150V wires (so it never worked.)

Anyhoo, so I'll pursue the white meter. Thanks.

I've been sorting some full years of Electronics Illustrated
to put up on the auction and came upon this from January of 1972:

Video Cassettes- Where Are We?

"...Despite all the blown-up publicity and the big wheels who
predicted a $1 million market for video players....
second thoughts now dominate the scene and all agree that
growth is going to be at a snail's pace. Success can only be
had in the business and institutional market...

(speaking of all the competing standards)

"...The leader here is CBS with its EVR system (which uses
a flying spot scanner), followed by RCA's Selectavision.
The RCA version seems to have a nebulous future indeed.
Some say the RCA system has already been scrapped...."

There just ain't no profit in fortune telling ;-).

The pornography market turned out to be a major factor in
promoting VCR sales. Also the regular movie industry feared
videotaped movies, but it turns out they make money on
sales and rentals of movies after their theater runs are
over.

And 8mm projector sales, too. Ever notice how many garage sales have
the projector, but never a camera...

Popular legend has it one of the major factors why Betamax died was
Sony's frowning on prerecorded porn comming out on the Betamax format.
since the bulk of VCRs ended up playing 'prerecorded' tapes anyway, one
wonders how Selectavision, or LaserDisc would have turned out if,
however politically incorrect, the manufacturers of those systems nudged
the porn industry to produce prerecorded movies...

Interestingly, The developers of DVD didn't make any mistakes - why else
does DVD have multi-angle, zoom, etc, in it? Those are features that
scream "porn"

It's not such a bad idea, the porn industry is huge. I've heard
estimates that it even beats out Hollywood.

Philip Nasadowski <nasadowsk@usermale.com> wrote:

"Popular legend has it one of the major factors why Betamax died was Sony's frowning on prerecorded porn comming out on the Betamax format."

Though it's doubtful that they would have had any say in the matter, since all it takes to make pre-recorded tapes are a master player, one (or more) recorders, and (possibly) the gear to hook them all up. Videodiscs were different in that manufacturing was controlled by the patent holders. (That was true for analog videodiscs, but today anybody can put anything on DVD as long as they pay royalties and abide by the licenses.)

"since the bulk of VCRs ended up playing 'prerecorded' tapes anyway, one wonders how Selectavision, or LaserDisc would have turned out if, however politically incorrect, the manufacturers of those systems nudged the porn industry to produce prerecorded movies..."

AIUI, RCA flatly forbade the release of porn on CED (in addition to RCA, CBS had a pressing plant). The situation with laser disc was somewhat different, since it wasn't controlled by a single company; in fact Pioneer bought MCA Disco-Vision's plant in California (and then gutted it) partly to be able to press "adult" discs that they couldn't make in Japan. (The Japanese censorship laws are so strict in some respects that Pioneer couldn't even bring in 1" master tapes of some *R-rated* American films to be pressed on disc solely for export back to the U.S. This notwithstanding the rather rough adult comic books that are said to be produced in Japan.)

"Interestingly, The developers of DVD didn't make any mistakes - why else does DVD have multi-angle, zoom, etc, in it? Those are features that scream "porn"

Multi-angle could be useful for some sports programming too. (And, perhaps, for 3-D programs that could be viewed on a special monitor -- there are even ways to do it without glasses. Of course that could be good for porn, too...:-) As for zoom, that's a player feature, not a characteristic of the format.

When DVD first came out one of the companies in Miami selling Asian computer parts had a HUGE stock of Oriental Porn DVD on the shelves. So what do you think the first DVD's WERE used for? BTW these were NOT region coded or encrypted either (they were NOT produced by the big movie houses, but by garage shops, assuming that there are garages in Hong Kong).

Yeah I did have one of those RCA CED players. I remember an article in an early 70's TV guide that reported on two video disk systems about to be released. One was the Philips laser disk, the other the RCA CED system. Video gramophone they called it. How come it took almost 10 years for these systems to be released? RCA called their system Selectavision, but they ALSO called used that name on their line of VHS machines too. RCA pumped tons of money into CED and kept the price of software low to attract buyers. The system was not as good as the laser players but much cheaper to own, and the software WAS a bargain! Then Pioneer started doing the same thing. At one time CED and Laser Disk software was cheaper than VHS tapes during a K-Mart blue light special!

If they had released porn, they could have called the players "pornographs" :-)

There was one X rated movie they did release, but it didn't have all that
much porn in it....

I used to work at the RCA Smirnoff labs in Princeton when the CED disc
thing was being marketed. We had a free lending library of videodiscs we
could borrow overnight on reconditioned players we bought real cheap.
We also had oddball test pressings laying around. I heard that the last
pressing of a CED disc was a listing of all the people involved in the
design, development and manufacture of this thing. Retailers were happy
to get rid of it "I want to give this thing a quick kiss goodbye". They wanted
the floor space to sell porn on VHS.....

No, The HQ-105TR was a combo CB transmitter
and HQ-100 general coverage receiver. See QST review Dec '61.
The marketing idea was obviously to get CB'ers interested in short wave
listening, to broaden their horizons, so they may make the leap to ham
radio. Of course the HQ-105TR would work on 10m a.m. with the right
Xtal.

Hallicrafters, in the early 50's had a combo novice c.w. TX/
S-38 class RX. I think they used something like a 50L6 in double duty
as audio amplifier and novice TX power oscillator. It really looked
like a kludge - I don't think many were sold.

NOTE: NO SHIPPING. Read no further if you are NOT
a local to Tacoma, WA and would want shipping.

Hello all,

I just lost my job of 16 years due to the slump in the economy,
(they simply eliminated the department that I was in),
and I'm selling off some big ticket items to stow cash in the
back and try to keep my house. My prices are towards the
upper edge, I know. But I am really getting concerned and
every buck counts. If you are really interested, let's talk. But I
don't think I'm 'out of line' on any items here.

I'm looking at this time for LOCAL PICKUP ONLY in Tacoma,
Washington. If no one comes forward locally I'll put them on
Ebay and deal with shipping at that time. I really don't want
to ship right now if I can help it.

I can email photos if really necessary, but since I'm looking for
a LOCAL buyer I figure it's more practical to visit my shack
and see them in person. But if you live say 100 miles away
and MIGHT want to drive in, I can send photos of what you
want to see. Trying to keep this simple.

1. Heathkit SB-110 6-meter transceiver, less power supply. I
bought this 4 years ago intending to get on 6-meters and just
never did. It worked perfectly at that time, with full output and
good sensitivity. I have not fired it up since. Looks very nice,
and is all original with no mods visible. Good rig, I think.
$275 - exactly what I paid for it, so maybe it's a bargain nowadays.
Pickup only in Tacoma, WA. I MIGHT have the manual - gotta look.
I also probably can dig up a supply for it (at the 'going rate' for
such things - $65 or so or whatever it is these days).

2. Heathkit DX-100 - prettiest DX-100 face I've ever seen. This is
a really nice transmitter, and works very very well. Rock stable,
great CW note, and although I've never tried in AM I have no doubts
that works too. Has original case. Light corrosion on the copper
chassis, but otherwise straight and original. All original knobs,
including the red ones. $300 pickup ONLY. Again, I might have
a manual for this too. I have this paired with my R-388/URR in a
matching DX-100 case, and it's my 'poormans gold dust twins'.
I'm not ready to sell the R-388, but I'm definitlely a poor man now!.
(The R388 is awesome! Neatest receiver I own) Great radios, both.

3. Collins S-Line. I bought this from my Elmer and good friend W7UD, Hank Perozzo, last year when he sold his house to move into a retirement home. I meant to 'keep it forever' but I also meant to keep my house too. The house wins, S-line loses. I have not had this on the air since I got it from Hank - but it was a 'daily driver' for him for 20 years and well maintained. Here's the lineup: 32S-3 transmitter with 75S-3B receiver. The receiver HAS BEEN MODIFIED to essentially make it a 75S-3C model. Hank ordered the extra crystal board and added a front panel switch to select xtal board 2, which is fully crystalled for all the 'good' shortwave bands, including 30-meters CW. Comes with the matching speaker power supply as expected. I do have the manuals, with Hanks notes in them. You will want to see these radios in person, I think, as there are little 'Hankisms' I want to show you. Oh, the receiver has a whole bunch of solid state tube replacements that were all the rage years ago, and it has all the filters, including the 200-hz (might even be the 150 - not sure)
CW filter. Again, I paid Hank $1250 for it last year and only expect to get the same. If I'm crazy high, let me know, but I think that sounds about right. Again, pickup only in Tacoma WA.

4. Very nice Drake C-line - Xmtr, Rcvr, and MS-4c with PS. Excellent condition,
and has the CW filter. Full output, tight alignment, no problems. No mods that
I am aware of, and all original. Forgot who I got this from - a guy named Randy
in the DC area as I recall, who sells lots of Drake stuff, or did anyway. Bought it
in 1997 for $600, but I think I want to try to get $650 for the station if I can.

5. I have MANY MANY other radios. Litterally hundreds. Many many Heathkits,
almost any you can name in the SB era. Also lots of Hallicrafters,
and Hammarlund. But with no job
and slim pickens some of them have to go to put cash away to try to keep my house. Locals - come over and let's talk. You can see a good number of these rigs at www.boatanchors.com - not all there, as the pictures are before
my divorce of 1998 and the 'first big' selloff of gear then. Seems I just wasn't
meant to meander into old age as a boatanchor collector!

Email and I'll arrange to have you come over. Guess I can say I'm home every
day nowadays, emailing off resumes and trying not to get gloomy :-) I live out in University Place, on the West side of Tacoma. Lotsa coffee always available, and good stogies are always welcome :-) Take care guys,

David Ellison WB7AWK

2069. Thanks for the Ebay tips!!!

Few days ago I posted a question about bidding on Ebay -- I am an Ebay beginner and I recently lost bids on a couple of items in the last seconds of bidding.

Several folks educated me about the practice of "sniping." I signed up for Esnipe and put in bids on three items.

The first auction just ended and I won it -- a set of books I had been chasing for some time.

I'm sure I'll lose my share but at least I am now in the game.

Thanks to all who offered suggestions and assistance.

2071. Octal Sockets and more!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-19 00:49:40 UTC
From: Lou <tech@dp.net>
Message-ID: <amb83onof1@news.dp.net>
Source record: 38494

Hello and thanks for reading......

If anyone has a need to replace an Octal Socket such as the tube type CB/Ham gear used for both AC/DC and can't find any locally, I have a few here. They are used, in decent condition. Some have AC cords on them, or some other wire. YOU would need to rewire for the intended rig or other purpose.

Also, have numerous other parts for some older Motorola stuff, and many other things. Far too much to list. But if you ask with your needs, I'll reply.I'm looking to clear out a lot of misc. parts and items. Items pretty well cover a gamut of categories. MOST will be cheap. The shipping is going to be the worst part.

Shipping will be extra and all payments via a Postal or Financial Institution MO only. I "usually" ship same day.
I've dealt with numerous folks on the Radio newsgroups and on E-Bay. Feel free to inquire or check out my profile. I can also supply photos of items of more value prior to purchase to let you see what you're spending your hard earned cash on up front. ALL descriptions of items are to the best of my ability. ALL (even some new stuff) is being sold AS IS. NO RETURNS......

E-MAIL DIRECT with questions...I don't always get to read the newsgroups......

Thanks,

Lou/Tech@DP.NET

Source record: 38496

Yes it can. It will only have one side band though. Tune it up for the normal 1kw input like you would for SSB. Then reduce the carrier so the output drops to 1/4 of what the full carrier out was. Don't worry about what the input power is. You need the 4:1 output power ratio. If the full carrier output power was 600 watts then you want to reduce the carrier to 150 watts out for AM. Don't re tune anything when you reduce the carrier. The final must stay tuned for the full power out as modulation peaks will go that high. Efficiency will be about 25 to 30%. That is normal.
You should have a scope to watch the audio so the negative peaks just reach the base line. That will be 100% modulation.

At 100% modulation with only 1 side band on AM it will sound a little distorted on AM receivers compared to having both side bands. This is due to the receivers diode detector problem. Modulating the rig a little below 100% may sound a little better to the guy on the other end although the added distortion is not that much as it only occurs on audio peaks.

Many years ago, I got a pair of 3-500's at a good price.
Have not needed them yet (may never) and I know that life on a shelf is not
too good for them.
I don't want to throw them in my amp for fear of blowing something up, so is
it worthwhile to
put them on the bench with filament voltage for a while?
Will that have any positive benefits?

OK guys, I've had a few calls and while everybody is thinking .. I thought that I'd try a slightly different angle. Anybody got something they might like to trade for the B-Line. It is complete with factory manuals and boxes and is typical for the vintage radios that they are. R4B T4XB AC4 MS4 and cables.

I like boatanchors and AM gear .. Johnson .. Hammarlund .. National ..

In particular, if you want to get my attention .. NC303 .. HQ160 .. Valiant II .. HQ215 or maybe a 75S1 or 75S3.

Call me or email me 419-433-2930. I live in northern Ohio in Huron, that's about 50 miles west of Cleveland and 50 miles east of Toledo.

None of the ads I've seen describe it that way. The QST product review
(December, 1961) describes it as a "5 watt 10 meter" AM transmitter. Uses a
6CX8.

Novices never had any HF 'phone until part of 10 meters was opened to them in
the '80s. And they are not allowed to use AM there.

How is life on a shelf not good for them? There's nothing in a 3-500Z that will deteriorate over time if they are simply stored at room temperature.

>I don't want to throw them in my amp for fear of blowing something up, so is
>it worthwhile to
>put them on the bench with filament voltage for a while?

I see no reason to do anyhting to them other than to see that they are packed away where they won't be mechanically damaged. Vacuum tubes are not like electrolytics.

2094. need help with homebrew noise blanker circuit

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-19 18:20:30 UTC
From: AJ Sanderson <ajsand@nospam.com>
Message-ID: <amd4h6$8vr$1@slb7.atl.mindspring.net>
Source record: 38516
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,rec.radio.amateur.misc,sci.electronics.basics,sci.electronics.design

I'd like to build a noise gate circuit for my HF receiver, to be located externally between the radio and antenna, but I'm not sure how to wind the toroids. The circuit I'm going to use (unless someone can suggest a better one for HF use) is at
http://www.lwca.org/library/articles/jtreed/gate/gate1b.htm

This uses two FT50-75 toroids and I understand I need to change these to FT50-43 for hf use (1.8- 30 Mhz). For 50 ohm input/ ouptut, how would I wind the toroids using 43's?

Thanks,
AJ

AJ,

Don't be too disappointed if the thing doea not work. I built something like thi some years ago, got only marginal results on a good day. What I discovered was that:

1. The noise phase during positice AC cycles was not the same as during negative AC cycles.

2. There was sometimes more than one noise pulse during a half cycle of AC.

3. The phase of the noise jiggled back and fourth.

4. The noise "pulse"can be very wide; that is, it showed ringing

I would add, however, if you're going to store big triode tubes, such as the
3-500Z's,
you would want to store them standing up. After a while, gravity will have an
effect
on the grid elements and perhaps cause them to sag a bit. Firing them up, after
that
might bring an undesirable grid to cathode or grid to plate short. Totally
undesirable.

From: Edward Knobloch <e.knobloch@verizon.net>
Message-ID: <3D8A402D.F681D09F@verizon.net>
Source record: 38519

My manual for a Henry 3K (about 1966 vintage)
has the following suggestion:

"Before first turning on new amplifier,
remove the rear panel fuse.
Then turn equipment on and run idle for a few minutes.
The 3-500Z vacuum tubes in the amplifier
have special carbon plates and were selected for their
greater power output and rugged dependability.
Used daily, carbon-plate tubes are unsurpassed
in their performance. However, if not used
over a period of several days, a small quantity
of gas may be exuded from carbon plates,
resulting in a slight arcing when equipment
is first turned on, tripping overload relay
and blowing rear-panel fuse." [end quote]

Of course, not all 3-500Z's have carbon (graphite) plates.

Does anyone know anything about "x-bones Antennas."
I have been trying to adjust my SWR on a Hustler 5/8 wave ground plane antenna, it is model G2537. It has been awhile since I have been involved with Radio. I got out of it for a few years, due to multiple problems, but at one time I was heavily involved. It has always been a love of mine. Is the length the key to proper swr adjustment? When using a palomar swr/watt meter with the reverse and forward switch, which one do I use to get the proper read on swr. I hope this makes sense. I appreciate any help you can give and hope to become a valued member of this group. thanks rp

Do a google search for Heathkit SB-200, there are a couple pages
dedicated to it including detailed repair and upgrade notes. I'd avoid
the 220 unless you need that last 3 db. The 30L-1 is nice but I'd
pass at that price.

Here ya go:

These amps are all from the era when 1000W CW/2000W PEP SSB input was the legal
limit. All cover 80-10 without WARC. Where two numbers are specified, the
second number is the later version.

SB-200/201: Pair of 572Bs. Runs 1000W CW / 1200W PEP SSB. Simple and
straightforward. Lots of mods to cover 160, or 6 meters at the expense of
another band.

SB-220/221: Pair of 3-500Zs. Runs 1000W CW / 2000W PEP SSB. Simple and
straightforward. Lots of mods, including softstart and QSK.

SB-230: Single conduction-cooled ceramic/metal tube. Can be very expensive to
retube! No cooling fan - utterly quiet in operation. Not as popular as other
Heath amps.

30L1: Collins design and quality. Runs four 811-As. Runs 1000W CW / 1200W PEP
SSB. Tubes are mounted horizontally, which means that only certain brands of
811-A can be used in this amp.

2112. Re: Heathkit linear amp question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-20 13:19:00 UTC
From: Charley Schwartz <cschwartz@rocko.mit.edu>
Message-ID: <3D8B2044.294CD870@rocko.mit.edu>
Source record: 38535

Hi Joe S:

I have owned several of these amplifiers. I have never had any problems with the SB200 or the 30L1 using the 572B tubes. They both work fine at about 500-600 watts output. The SB220 is also fine but may require a bit of attention to the parasitic suppression. Of the several I have had in the past 30 years I have not had any oscillation problems but other users have.

The SB230 is a different story. This amplifier used a 8875 which is a transverse (radial) cooled ceramic tetrode which is expensive and delicate (about $ 450.00 if you are lucky). The 8875 is rated at a higher power than the axially cooled 8874 or the conduction cooled 8873. The increased ratings is with increased airflow. This tube was only used in the amateur commercial market in the Heathkit SB230 and the Dentron 1200 so it was not popular or readily available in the ham community.

When I used the Heath and Collins amplifiers I had one for each band and they were automatically switched by the transceiver. Later in the life of this arrangement I replaced the SB200s with Kenwood TL922A amplifiers.

I believe the TL922A is superior to any of the Heathkit amplifiers and only commands a few more dollars in the used market (SB220 about $550.00 and a Kenwood TL922A is usually about $ 750.00). The Kenwood construction and reliability impressed me enough to keep the four of them as spares when I replaced the tube type amplifier stacks with the new Yaesu Quadra solid state systems (nice but pricey).

Some parts are still available for the SB-200 / SB220 series. Harbach Engineering used to supply some parts but he has since passed away. His line of retrofits can be found via www.google.com

The SB200 and SB220 are usable on 10 & 12 meters also. The newer SB201 and SB221 were not but could be modified (some are). I do not know of the band switch wafers to allow selecting 10 meters are readily available.

The TL922A did not included 10 meters, the TL922 did. These have the band switch for 10 meters already installed. Some components must be added to the input circuitry to use these on 10/12 meters. Many of the Kenwoods were sold outside the USA where the 10/12 meter restriction on commercial amplifiers does not exist.

Good luck,
Charley W1TE

Source record: 38537

Most of us need to tame our bugs as they were all spec'ed for
25WPM and up.
There are cheap simple non-invasive wgts for both square and round
dit arms.

Square dit arms like Champions and old Lionels
Tire shops use a string of small square 1/4 ounce lead wgts mounted
on double sided sticky tape for balancing after market mag wheels.
Their cross section is the same as the side of the stock Champion
slider. They are free. Shine up, spray with Krylon Clear,
attach to left side with dot of 3M #8B WxStrip Adhesive
available any auto paint store, or whatever.

Round dit arms like Standards and Presentations
Home Depot et al sell pkgs of small machined metal donuts with
recessed set screws in every drill size. These are used to slip over
drill bits to limit drilling depth. Get the one that fits your round
dot arm. Lock it in front where it gives the desired speed range
and use the stock slider to set speed.

Many of us find setting dit time duration with scope to around
50ms sounds best and holds nicely from too slow to too fast.

When choosing an amplifier -- you might want to consider whether they cover the WARC bands 12 and 17 Meters. Although some of the older amps might be horsed up(down) to these bands, a local guru advises BE CAREFUL -- some amps have gone poof when trying this and mods could be extensive.

Personaly, I wouldn't be without 12 and 17M amplifier capability -- great DX bands.

I understand the SB-230 amp uses a 8873 tube
http://www.cpii.com/eimac/catalog/16339.htm
which is hard to find and expensive.

SP-600's, an early plain JX cosmetically 7 and a later JX-26 cosmetically 9+, your choice. Both are working with a full compliment of good tubes & both need more recapping for full functionality & performance. Have original complete manuals, not a copy, also a copy of the most-usual portions sufficient for going through one. Neither have any known mods. Buy both for your rack & go dual diversity? Located Maine, you figure out how to transport, I will help as able, can drive 100 miles. Good ones are getting hard to find.

Very early HRO, determined to be within first 3 mos of mfg, totally original & working, with orig supply (which was the FB-7 supply for these first HRO's). Not "ivory meter switch" (much confusion by some over this), please don't ask. White "S-5" meter. Unusual original grey dial (not silver or black, much confusion over this by some too). 5 coils, bought over time for it long ago by orig owner from whose son I acquired it, 4 black graph & 1 white graph, boxed. Rcvr cosmetically almost perfect, supply cosmetically abt 6-7, original connecting cord & rubber plug deteriorated but working. Still has orig tubes, also complete fresh NOS set available. With an original but slightly later generic National manual covering this & similar prewar models with both 2v & 6v tubes. Correct spkr enclosure carefully & correctly restored by former prominent National collector & historian, with new correct grille cloth & feet, awaiting your spkr. This is a rare and valuable HRO in pristine condition & never messed with, fit for a museum, and a disprover of a few minor HRO myths, give yourself a nice discount but don't insult me too badly. It also needs careful packing & shipping beyond that for your usual nice BA.

HRO 5TA1, from a '40's - '50's ham, with orig supply, orig spkr & orig 5 boxed coils A - E. Cosmetically about 9. Typical ham mods of the period: a useful National one-tube xtal calibrator small subchassis with orig-style switch tastefully added at front to right of S-meter, S-meter adjust pot added on side, and 2 toggle switches & a period jeweled pilot lamp added to 3 corners spkr enclosure. ON/STBY/OFF toggle switch has (I believe) been replaced by non-original longer toggle. Original manual from orignal owner. Rcvr works & looks great, S-meter is fine but appears miswired or misadjusted (maybe the adjustment mod is crap). I have operated it many times on all bands & touched or tweaked nothing in it (you decide whether this is good or bad<BG>). I love it. Take it away before I change my mind, I need the money.

HT-40, all gone through, recapped & burned in for several hours on all bands & modes into dummy, works great, puts out more than it's own meter says. Original manual. One of two small original TVI chokes at

AC line entry missing, easy sub, I didn't bother. Under-chassis fuse added by someone where it is missing to protect pwr iron. I found that the supply was partly miswired since new, the guy operated it like that for years & was happy with it, maybe he fried the choke & thought he might fry the xfmr, go figure. The manual depicts the correct arrg't so clearly that he must've been drunk, oh well. It runs much better correctly wired. Only mod is a neatly-installed phono jack on rear apron for easier VFO connection (instead of sticking it into the front-panel xtal socket). New NOS final, plus strong spare. Cosmetically excellent excpt small scratched area at cabinet top center, minor paint flaws at front inside corners, one tuning knob has a chipped flute, panel perfect. If you know this rig you know it is a simple, reliable, idiot-proof thing that is fun 80-6. It likes strong xtals if you use them. Take it away so I won't be tempted to operate it illegally. If you need a Heath VF-1 that I haven't been through for it, you can have that too, I need your money worse than a dead man needs a coffin.

National NCX-3 rig, complete with both AC supply/spkr & the uncommon original mobile supply. Cosmetically great excpt for AC supply/spkr perforated alumninum grill which could use some de-denting & polishing. One knob looks non-original but close, get the correct one off an Eico scope. Has two neat-looking screws covering panel holes where I believe the once-popular offset mod freqently recommended for the NCX-3 once resided. Put it back in so people won't make fun of you on the air for walking down the band. I listened to it a few times when I first got it but have never operated it in xmt & know nothing about it except no smoke came out. Manual copies for both rig & mobile supply. Have NOS new finals for it, maybe more than one pair, they are yours. Reputed to have excellent AM sound as well. You need this compact & historically pivotal BA more than I do, make me an offer I can't refuse, I have over $350 in it not counting the new extra tubes, take it for less. Put it aboard your boat or vintage car with the mobile supply. I can't eat it, sleep with it or dance with it, it's useless to me but not to you.

Any other question about any of the above answered, IF accompanied by your offer conditional on it. Please don't send mails saying "what do you want for it", they won't be answered. If I owe you a favor from the past, figure it into your offer, this is your chance to get even with me. :-)

TRANSIT NAVIGITATION SATELLITE RECEIVER

This receiver was manufactured by Westinghouse for the US Navy.

Was used with the Transit Navigation Satellite System in operation form the early 60's - 1996.

The Transit Navigation System is the precursor of todays GPS System.

This system was removed from a Polaris Submarine.[illegible] (Possibly the HMS Resolution)

A version of this system was on all Polaris Subs and was used to target the missles and position the sub.

Contition is Mint but I am unable to tell if it is operational as I do not have manuals, cables or other devices that may have been originally included.

What you are bidding on is the main reciever unit.

System is very heavy (1700Lbs) and will require road shipping.

I believe that this in the most hard to find of any military receiver.

Thanks for the visit.

[illegible]

Transit is obsolete, all of its satellites have been decomissioned.

hey ricky
i dont know about the antenna but the SWR meter you set it on forward key the radio in either AM or FM mode and adjust the output to full scale then switch to reverse and that will give you your SWR
now for the antenna to tune most antennas you adjust the lenght the longer the antenna the lower the freq the shorter the antenna the higher the freq
so test the SWR on what freq you want to work then check it higher and lower to get an idea which way you need to adjust it
good luck and happy hamming

Ricky Parker wrote:

Well, you can't say how well the Heathkits are built. They may be solid,
they may be awful.
The 30L1 is overpriced.
You probably would be better to choose from a used Ameritron, Kenwood, or
even Dentron.
Best yet, see if you can get an old Drake amp.
PS..my favorite on your list is the SB230!

I had a pair of Eimac tubes, that I got in the mid 70's. Recently, I installed them in my Henry amp, turned it on and away we went. Not a sign of any problem. These were stored in the upright most of the time. They also survived a move from California to Arkansas in the back of a moving van. Take it for what it's worth. BTW, the only thing in a tube, is a vacuum!

I would like to locate (5) capacitors for an older Heathkit DC power supply I just bought. It is the HP-13 and I opened the case and one of the capacitors had a hole in the end and material coming out of the hole. I have never seen anything like this happen before so I have decided to replace all (5) Five at the same time. The Heathkit part number is: 25-207 and they are 20 ufd @ 500V electrolytic . I would like to find some at the original cost 85 cents each (hi hi) but with inflation I would expect them to be somewhat higher these days. Also, if you might have an old unit for parts I would be interested. Thanks in advance, 73' de aa8wl Sam

>The increased ratings is with increased airflow.

Charley and group,

I double-checked in the QST Product Review, and the SB-230 uses the
conduction-cooled 8873, not the 8875. Instead of a cooling fan, it has a
heatsink! The 8873 can be expensive and somewhat hard to find. A replacement
tube may cost more than the '230 cost new!

The '230 was priced at $370 as a kit in 1976. It was part of the SB-104 line.
Its ratings were 1000W CW, 1200W PEP SSB input. Because of the 8873's low drive
requirement, the input circuit is not tuned, and has resistor swamping.

For the SB-230 -- If I recall -- part of the heat sink configuration was beryllium oxide coupled to metal heat fins (no Fan). The beryllium oxide (nasty Stuff) put a lot of people off. But not a big deal if one observed the precautions and instructions. My SB-230 (used) ran for 10 years before the tube gave up and for me it was not worth the price of a new 8873 -- even in the late 80's. Besides wanted the WARC bands on my new one. With an outboard fan it would do full power all day/night in a contest.

Thaks for the tip, Pete. I did have to replace one of the metal-cased chassis-mounted caps in the AGC circuit, in the process of which I actually figured out how that crazy system works. But I probably didn't ohm out all the resistors.

In older sets (like a National NC-270) I check all resistors, especially in screen and cathode circuits, and always catch some that are double or worse the true value. But the R-388 seemed "new" enoguh that I probably didn't do that, and maybe I really should go thru all that and give it a fair shake. Heck, I don't know if I swapped tubes or not. 73, Mike K. AA1UK

I'd install them in the amp, turn on the filaments, and let them cook
for an hour or so before applying HV, then bring them up first at low
power if you can. Unless one has developed a seal leak they should be
OK. If one has you'll soon know it, the filament won't last long.

If you get a good SB220 you won't be sorry. The very best and most amp
for the money. Most have had some replacement of come timeworn
components such as electrolytic filter caps and bleeder resistors, and
many will have some modifications that are an improvement on the
original design. Downside, good tubes are getting scarce and a bit
pricey, but they aren't fragile, if you operate sensibly they'll last
forever. And they don't work on 160 without the Measures mod.

Point of interest, the 8873 ,8874 and 8875 series of tubes were
electrically identical with differing anode cooling schemes. The '73 was
conduction cooled via a heatsink, the '74 was conventionally radially
cooled by air from the base upward, and the 8875 was transverse cooled,
with air blowing across, through its anode/heatsink which has horizontal
fins .

I've owned an original Dentron MLA2500 for over 20 years and it's my
favorite amp. A very compact desktop amp, it uses a pair of 8875's and
has garnered a reputation for eating them, but mine are still the
original tubes running full outout, tho I long ago picked up a pair of
spares just in case, before they got so pricey. The key is to monitor
the grid current while operating and make sure to keep it DOWN. The
"power grid" tubes are somewhat misnamed, as their grids are not really
that rugged when it comes to drawing substantial current for long
periods of time.
Somebody will probably say "That's not what the book says", and that
will be right, it says 100 ma. maximum, but lots of experience with
these tubes in commercial use has shown me they will run well for quite
a while under serious abuse before cashing in, but they'll go forever if
you treat them right. They need to run on very low, or even zero, grid
current, where they will run virtually indefinitely. I monitor it all

the time and it never indicates grid current flow unless something is wrong. Operating while mistuned or unloaded is murder on these tubes, it causes the grid current to shoot sky high. I believe that is why people had problems. When you monitor the grid current continuously while operating you catch these things before it's too late.
Long as I want an amp I'll probably keep the old Dentron.

Lots of good opinions offered here - here's mine:

I have owned two SB-200s, two Ameritron AL-811H, and a Collins 30L-1, among other larger amps. I would suggest that a good condition 30L-1 is the best choice among the smaller desktop amplifiers. The Heathkits are variable in quality depending upon how well they were constructed. The Ameritrons were good amps but the cost cutting was evident in component quality. There was occasional arcing and one popped resistor in my 811H's.

The 30L-1 is built like a tank, very well designed and so very easy to tune. You can be confident that you are operating within design parameters. Mine has been a rock ever since I bought it. It is so very dependable - not nearly as cantankerous as many "modern" amps and certainly more reliable than most other 30 year old amplifiers. It seems that for whatever reason the old Collins equipment - the 30L-1 included - has generally been maintained in better condition than some other equipment of the same vintage.

Just my to cents worth. I have never owned a Drake amplifier, but if they are as good as other Drake equipment was (is) then you could hardly go wrong there as well.

REALISTIC DX-390
With Mute and Beep Mod!, Manual and Power Adapter, excellent condition, NO BLOWN FETS! -$65.00

GRUNDIG YACHT BOY 400PE
With Mute and Fine Tune Mod!!!, Manual, Original box, carrying case, Wall Adapter, long-wire external antenna,
Hardly used! -$105.00

REALISTIC PRO-2040 SCANNER - Canadian Version
With Descriminator tap Mod, RCA type plug added to rear of unit to connect DATA SLICER which I'm also selling
Excellent scanner, I've decoded ACARS, FLEX, POCSAG paging, MDT, MOBITEX, etc with the data slicer and my PC
I will even include the software. This scanner can receive cell phone transmissions also. Original box, manual,
telescopic antenna and power adapter included. -$125.00

GE SUPERADIO III
High performance AM/FM reception, very clean and in excellent shape, I've dxed stations as far away as Texas!!
on this one. (I'm in Ontario, Canada) -$30.00

BELTEK 23 CHANNEL AM TRANSCEIVER
This one's an oldie, looks like a mid seventies transceiver, couldn't find anything on the web about it. It measures about
12x10x4 in an all metal cabinet, it has a 120v ac as well as connections for 12v mobile. This is a solid state transceiver
and it works. -$15.00

I'm located in SW Ontario, shipping to anywhere in North American is about 8-12 dollars for these items.

Regards.

2140. INFO on Lafayette PF300

I have about 50 untested tubes that I've pulled from junked radios and TVs. I don't want to keep them around anymore so I'm giving them away-you only pay $2 shipping cost for each tube or $25 for the whole box. There is a good 6146 tube here that is $5+$2 shipping or include it in the rest and pay $30 for everything. Each tube is in a labeled baggie. Email boxoftubesfs@yahoo.com. List follows:

I need the male panel connectors for the TCS receiver, transmitter and control box as would be mounted on the power supply and/or the 3 above units. I found a nice set of original cables and I'd hate to cut the connectors off one end if I can possible avoid it (to mate to an HB p.s.). Of course, if anyone has an extra power supply out there, I'd be happy purchase it!!! Thanks much.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-22 04:56:54 UTC
From: k9uw@msworldnet.com
Message-ID: <b44e3c74.0209212056.16f05a34@posting.google.com>
Source record: 38479

Greetings, everyone!

I've been asked to sell a Gonset 2 meter converter in like new condition. Can anyone tell me about this little box, and whether there might be a market for it? I've looked at various boatanchor sites and conducted google searches but came up empty handed.

It appears that the unit was operated in a mobile environment and that it converted 2 meter AM to be heard through one's AM car radio.

Our local club obtained it as part of an estate and we're looking to sell it to raise money for our club station. Is this the kind of device that one throws on Ebay or are there some people I should be contacting directly?

Or should it go in the dumpster?

73, and thanks for reading

Mike

You need to find a Gonset collector who appreciates the
Gonset equipment. The unit has little value to the general
ham population, but it probably has some nostalgia value
to someone who used the device in the 50s, or to a serious
Gonset collector. As others noted, eBay is probably your
best venue for selling it, unless you piqued someone's
interest with your query!

It definately doesn't belong in a dumpster. Value also depends
on condition. If it looks new out of the box, and has the original
manuals, etc., it will command a higher price.

Peter

From: Roger Basford <Basford@btinternet.com>
Message-ID: <Jib8gaABWej9Ew3C@btinternet.com>
Source record: 38258

Hi,

I've just acquired a nice example of the BC-221AF and I have a question for any experts on this equipment.

My model has a 'phones on/off switch fitted in place of the upper jack socket on the front panel. The "mod" appears to be professionally done, the switch and wiring look to be WWII vintage, so I'm curious to know if this is an "official" mod or is it likely to be one done by a previous amateur owner? If the latter, then I'm looking for the appropriate switching-type jack socket to restore the equipment to near original! I understand there were over thirty "marks" of BC-221 built but all the pictures I was able on the Net to find show models with two jack sockets.

Hi MIke,
The key phrase here is "like new"- it will fetch a good price on E-Bay. Be sure to include a picture

The Harley-Davidson shops have been carrying it in Colorado but the one in the Ft Collins area has said that they will soon be out and do not plan to carry it any more.

Might want to stock up if you find a supply left at your local HD shop.

Unless the line has been dropped recently, Pep Boys (auto parts) in Maryland has wrinkle black (only). The can says Plasticote, wrinkle finish, textured spray paint, #217 Black. The gray color has been dropped by everyone, it seems. Also, I think that Antique Electronic Supply has it, too. Hope that helps.. BTW, shipping paint is sometimes problematic. de K3HVG

Pre-heat your work and bake your wrinkle at 160 deg. (if you can get your XYL to agree!!!) until done. With the above paint, it appears that too much paint is not the issue... too little and no wrinkle!!

I always found the experimental aspects of ham radio to be
most enjoyable. The exploration of the many facets of radio
and electronics have always been more interesting than the
"must have microphone - need to be noticed" mentality.

In that case, CW for me was simply one more achievement
experience in ham radio. Those who would treat ham
radio as a mere extension of the microphone, sell it far short.

In order for mental health "professionals" to have a clue of
the actual ham radio experience, they would have to master
it themselves. The cult experience is sadly often the first and
last experience of the newbie, and most easily avoided on
HF CW, where the experience and training transcend personal
issues, where no one even knows how old you are unless you
tell them (or show them).

Where the novice ticket was true entry level, the Tech license
was often a dead-end compromise and an experience in small
time politics and club pecking orders. It's a pity that now
people will have to find Ham radio carefully among those who
have a license to hate hams.

Mine still has the original tubes, and is great for armchair copy on a
noisy band. Excellent choice for a table-top 115v amp.
:
: The 30L-1 is built like a tank, very well designed and so very easy to tune.
: You can be confident that you are operating within design parameters. Mine
: has been a rock ever since I bought it. It is so very dependable - not
: nearly as cantankerous as many "modern" amps and certainly more reliable
: than most other 30 year old amplifiers. It seems that for whatever reason
: the old Collins equipment - the 30L-1 included - has generally been
: maintained in better condition than some other equipment of the same
: vintage.
:
: Just my to cents worth. I have never owned a Drake amplifier, but if they
: are as good as other Drake equipment was (is) then you could hardly go wrong
: there as well.

6LF6: generally interchangable (no changes) with 6KD6, 6LX6, & 6MH6; also (may require minor changes?) 6JS6C, 6KN6, 6LB6, 6LR6

The pinout for the 6KD6 is as follows:

PIN Function
1 heater
2 cathode
3 grid two
4 grid three
5 grid one
6 n/c
7 n/c
8 n/c
9 grid one (tied to 5)
10 grid three (tied to 4)
11 Grid two (tied to 3)
12 heater

Perusing the TM 11-300, et al, it appears that virtually all versions use the phones switch to disable the fil circuit. It appears that the AJ and AL versions (at least) have a a "warm-up" position on the function switch which allows filaments (with phones plugged in) but disables the B+. I don't think your mod is an official MWO, etc. I'll have to look and see if I can find any true, dual-circuit phone plugs.... de K3HVG

Greetings,

Existing BFO transformer (T28 on an HQ-170 or HQ-180) has cracked slug and
is not usable. Need to replace it or rebuild it.

Thanks.

Cheers,

AL

I agree with your comments on the 30L1. We used to drag them around South East Asia in Samsonite suitcases. In the belly of C-130 aircraft, on Huey choppers, In jeeps and sometimes even in APC's. They were indeed tuff !!!.

I found this received at a garage sale this weekend. No documentation came with it, and I am wondering about the tube line-up. The chassis indicates a 6AK6, but there is a 6AR5 in the socket. The tube is marked Knight Kit, so I would imagine it is original. Anyone know if the tube line-up changed during the kit's production?

looks to be that way.

Remember, though - the 6KD6 is 12 pin.
I think the 6JS6C, 6LQ6, 6JE6C are also 12pins.

a 6146 is 8 pin.

you'll have to replace the plug, to use 6146's. (suggested route - not the other way around)

Joe

I'm kinda partial to the heath amps.. I have a SB200 that has been
working fine for years.. A little care in tuning and not abusing the
amp it will last a long time. There are several mods out for it. The
tubes are still available and not to costly. All depends on how much
you want to pay and how much power you want..

The SB220 is a good amp tubes cost more but more power out...

Heath also built a single tube amp the SB1000 I believe.. I have heard
good things about it but no direct experiences.

Google is good.
Google is your friend.

Ggoogle is as simple as;

1) type http://www.google.com (or, even just google.com)
2) in the search box, type what you're looking for.

THAT'S IT! There ain't even a three!

oh yeah, READ THE RESULTS.

Could it be more simple?

Mike, your site says:

Note. I use a Javascript to stop SPAMMERS from harvesting my E-mail address.

Please bookmark my site and check back to see what else I've dug up to list.

I will not waste my web space or your download time with useless graphics or
midi files

Do you not realize that PassionUp, and the other three pop-ups that your site
puts
on peoples screens is howw these people harvest e-mail address?

Spyware, buddy.... You probably went with a company that allows you web
access for free, IF you let this and that happen. By allowing those third party
sites to
scan the rest of the world, and attempt to install it's spyware on our systems
(at least
in my case) that this is how Spam mail is propagated?

What you're doing is good.
Who you're doing it through is bad.

There are several sites out there that give free web hosting, and no spamming or
spyware
goes on.

Host your own site. Use one of the dynamic domain name servers - the name stays
the same
but your ip can change to whatever.

now, I've gotta clean my system out, again.

2216. WTD: Any info on Jim Rogers and/or Black Widow transceivers

Greetings,

I am writing an article on the Black Widow transceiver and it's designer, Jim Rogers. I have only one example of Jim's work, and my own personal ecollections. (Jim lived about six blocks from me in Los Angeles.)

If you have any recollections of Jim, his wife, (who wired every Black Widow) or the Black Widows themselves, I'd be interested and source credit will be given. I don't think Jim ever advertised the Black Widows, but I could be wrong. I'd be very interested in any ads that might have appeared. The years would have been from about 1956-1959. The Black Widow was a California rig, so I'm hoping some of you in 6 land will be able to help.

Harley-Davidson dealers stock it, and a good auto parts place might have
it too. The Harley brand is good but MUST be heated while drying to get
a good even crackle.

Very nice looking Heath Seneca. I didn't check it out into a Dummy Load, but everything comes on ok & all the tubes check out fine. Unit is in very nice condx except for the back of the cabinet which the previous owner had a blower fan mounted. There's a hole where the fan was. Otherwise, the cabinet is very nice for the age of the rig. Pictures can be seen at:

http://www.qsl.net/k2fw/sale_items_4.htm

Please feel free to ask any other questions or for other pixs!

The Seneca also comes along with the original manual.

Asking $120 plus actual shipping via UPS.

Tks for looking,

Steve K2FW

Source record: 38301

I have a Hallicrafters HT-30 SSB/CW/AM transmitter that is in working condition. It was built in the mid 50's to match the SX-100 series receivers with the classic "half moon" dials. Only a few were made and sold for $495 at that time. Knobs are original and not repainted. Because of internal high voltage, it should only be purchased by a skilled operator of older tube type equipment. Manual included. Sorry, only USA sale. $350

I don't know if these bottles act like the tetrodes (4-250-A, 4-400-A, etc.) but they might show a little gas inside the glass envelope until used awhile. An Eimac engineer once told me that their tubes are so "hard" that hydrogen is pulled thru the plate/pin seals to the inside the tube, to be reduced to tantalum hydride thru adsorption when the plates get hot. Good sounding story; but I do know that any blue gas glow inside the glass disappears after running the plates with a little color.

Hi,

A friend is looking for coil forms such as Hammarlund XP-53 1 1/2" diameter; SWF-4,5 or 6 pin; Bud 1 1/4 and 1 1/2 mica filled bakelite 4,5 or 6 pin; Amphenol 24-4P, 24-5P and/or 24-6P polystyrene 1 1/4 form.

If you have any of the above please send me your contact information as well as what you have and I will pass it along.

Thanks,

Doug W3IIY

On mine the A.F. level doesn't have a knob. It is a screwdriver job (to
calibrate the meter on A.F - volume - setting), though I have seen "newer
ones" with a knob, maybe yours is like this.

If there is a fixed mica padder cap, replace it with a fixed
cap of smaller value, with a variable ceramic trimmer in parallel. Use the
trimmer to fine tune instead of the slug. This should get you at least
going again... Had to do it on a HQ145 I own.

Pete

Can't help you there, but you may be able to find a reasonably similar unit
from some other surplus gear. The Racal mater is an Ernest Turner 200uA
movement.

>Also need a manual and the smallest knob (AF level)

The "AF Level" control adjusts the audio line output (connection on the
back). It's usually a screwdriver slot covered by screw-on baekelite
cap.

>
>RX is serial number N371 - any idea of where I can look up a date for it?

Mine's s/n 696 - still working perfectly...meter included :-)

Anytime Mike. I used to work for a fellow that told me that even in equipment that hasn't been used much, those resistors still change value over the years. I don't know how true that is. I do know what you are talking about, concerning the AGC circuit. When the cap in the AGC circuit dries out, you end up with bass frequencies modulating the AGC bus, giving that distortion on bass guitar peaks, etc. Good luck on your receiver; I think that you will like it, once you get it finished.
Another thing that is good to correct is any tuning error in the PTO; if the endpoints are too far off, you won't get good RF tracking across the tuning range of each band.

Pete

I think that most older IF transformers had 1/4 inch tuning slugs in
them. It you find one that is
not long enough just use two of them.

I have no information but I bet there isn't that much to them. If they
have detector diodes inside, get out a good DVM, put some RF into the
things with a dummy load, and see what comes back. I bet you have three
wires being used, one being ground, one returning a voltage proportional to
forward power, and one being proportional to reflected power. Pop the case
and see what is in there.

From: Loren Hunt <ad6zj@amsat.org>
Message-ID: <up475oqhfprg02@corp.supernews.com>
Source record: 38394

Hello,
I was given a Swan SS200 and matching supply and after purchasing the manual I now have it completely functional. I have used it at home and mobile but now it just sits. Question is what to do with it. I was thinking about unbolting the 200W amp and using it with one of my homebrew QRP rigs. If it is a desirable or collectable rig I would hate to separate the subsystems so thought I would check first. I Have not seen any listed on ebay or eham.net so I have no idea if it is rare or just undesirable.

Thanks de AD6ZJ, Loren

Gary,

If you can pick up a Rycom selective voltmeter or a TMC SSB convertor I think you'll be amazed at the quality of ssb from the old military receivers like the sp-600. I use a rycom r-1307a with a 7360 beam deflection product detector with both my sp-600 and r-390a and believe me it puts the high end Icom to shame! Flame jacket on Rice Bucket Lovers. If interested I have run across some old CQ articles where they use a beam deflection tube 6ar8 or equiv that's not quite so rare as the 7360. I'm lucky that I have three spares.

HQ-110 receiver chassis, with all good tubes. Everything is there EXCEPT the power transformer and all esthetic items (case, knobs, dials, etc.) COULD be restored, but most likely is a parts source. But it is complete - IF you replaced the transformer and put it in a good case, you'd have a 110. So it could be used as a 'reverse restoration' project for another 110 with a trashed chassis. This one is really pretty nice. Too good to just strip out for the parts, anyway.

I spread a cloth on a smooth surface and apply Nova plastic polish- then move the meter face in figure 8 patterns. This way, you will not wear an indentation into one area of the meter.

There is a kit from RCA intended for removing scratches from projection TV screens which works beautifully. Cain Electronics in Hampton VA carries it and it's about $20. If it's too badly scratched for that stuff, you can first rub it down with green jeweler's rouge and then use the slurries from the RCA kit to polish that out. A truck stop should carry jeweler's rouge or a good auto parts store should be able to get it for you.

Novus Polish available thru a number of the antique radio outlets does a
pretty good job. I've also used a Canadian product (GT-88) which is the
equivalent to something that was sold in the US 'only on late-night TV'
for shining up old cars in a junkyard, etc. I can't recall the US name
but it is probably commonly available nowadays. It works great.
Check http://www.tubesandmore.com for the Novus polish.

Hi, all...
The S-meter in my Hammarlund SP-600 has given up the ghost. Anyone have one they'd give up for love or money, or know where to find one? Okay, skip the love...
Alternatives might be to swap in a 1-100ma meter, or just swap that movement into the original case. Any advice on that?
Thanks in advance,
Nelson

There are pages of individual pcb schematics and a general chassis
interconnect schematic. What do you need?

There are several venders who stock a reproduction manual.
You really need the entire manual to service this rig.
There's lots of adjustments!

manualman.com and w7fg.com have schematics/manuals.

I've repaired several of these rigs.
Let me know if you have specific quesions.

Source record: 38419

Please don't butcher the rig.
It is both rare and desireable.

Historically, it was one of the first successful (at least technically
speaking) all soild state rigs.

It was priced about double that of other Swan rigs. The pricing plus
the lackluster marketing by Swan meant that they sold very few - only
200 or so. They were made around 1975.

Plus, unless you use that amp with a proper ALC circuit, you'd
probably end up blowing up the finals.

BTW a couple of SS200's have definitely been on eBay. In good
condition with the supply, they bring around $300 to $500.
If you pull that final amp, the rig would be virtually worthless.

Most forms of fine abrasive mixture should work on hard plastic. If trying something not specifically made as a plastic polish, you might want to first try it on a inconspicuous spot, in case there is some sort of undesired reaction. I have used paste silver cream/polish; because it's what I had.

You don't need that junk! What you need is to get the signal right off
of the bridge and pitch all the additional stuff. It should have a
pretty standard bridge and detector in there, right?
--scott

Send me one and I'll take a look at it. I'm a government agency.
Well, not right now since it's after five.

2312. Who does 'Foam-in-Place' packing in Tacoma, WA area?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-27 02:24:53 UTC
From: Dave <boatanchors@hotmail.com>
Message-ID: <3d93c07f$1_2@news.meganetnews.com>
Source record: 38435
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

Hello all,

I have some BIG radios to get ready for shipping - DX-100's and the like.

I've heard that some 'pack and ship' places are now doing walk-in 'Foam in Place' packaging for folks, where they shoot the polyurethane goop into a plastic bag surounding the radio for maximum protection.

I've seen guys listing radios for sale with '$20 for Foam in Place packing' added to their shipping cost - seems a fair cost to me for such good packing.

Does anyone know who does this in the Pacific Northwest? Tacoma, specifically. I did a Google search but the search terms are too broad to really narrow anything down.

Any help out there?

thanks,

David Ellison WB7AWK

You might talk to a packaging supplies company that sells the raw
materials for this, and find out if any of their customers offer this
to the public. The Thomas Register (also online) would help find them.

I used to work for a small manufacturing company which had this setup
out on the loading dock.

There is also house insulation done in a similar way, maybe this would
be worth pursuing.

I had to clean many power supplies years ago when the "Foam in Place" had entered improperly sealed power supply storage bags. What a mess. This was during the Mid 80s, and the power supplies were for commercial networking chassis. I had nothing to do with the improperly sealed bag, but they took several "electronic techs" to help clean the power supples.

Be sure that the item is sealed air tight.

It does take some practice to get reasonably good at it, and to take
care of the equipment to get good results. A place that has their
people doing 82 different tasks at once may not be the best for this.

As the other poster mentioned, it is very important to wrap your gear
well to keep the foam out of it. It is amazing how just a couple of
drops of the foam mix can expand inside an unrestricted space.

Hi,
I have a Clegg 99 and just made a homebrew dummyload.
I have an old "CB" swr meter that I would like to convert to read 6
meters. Anybody know of a possiable conversion for this. I'm trying to see
how much stuff I can homebrew or modify to get the station on the air.
So far spent..$20.99 for the Clegg.
$4.00 in caps and resistors.
$.0.00 for 3 element yagi..(old chopped CB antenna)
.45 for lightbulb (dummy load)
$11.00 for 50.400 crystal
Trying to see how much of a "cheap date" I can get..lol
Thanks.............................Jos...

Source record: 38349
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.antiques.radio+phono

FOR SALE:

Multi-Elmac mobile HF tube type receivers. These are pretty hard to find.

1) PMR-7 receiver has ten tubes, double conversion superheterodyne covering
the 160, 80, 40, 20, 15, and 10 meter amateur bands, plus the standard broadcast
band. Designed primarily as an efficient communications receiver for mobile use,
it is also especially suitable, because of its small size, for (1) marine and aircraft
installations; (2) portable operation; and (3) as a fixed station or monitoring
receiver. It is not intended as a converter to accessory to another unit, but a
complete receiver, employing a separate power supply and speaker as described
in the manual. Every effort has been made to furnish the user with an extremely
stable receiver of rugged construction, compact layout, and high sensitivity.

Very collectable...requires a power supply (See below)
Unit is in good condition. All original knobs - looks to be complete.
I have not fired it up as I do not have a way to do that easily.

The external dimensions of the PMR-7 receiver, including the control knobs are:
height 4 5/8", width, 7", and depth, 11 1/2". The depth behind the panel is 9 7/8".

Available for $75.00 plus shipping

2) Model PMR-6A covers 160-10m ham bands.
Very collectable...requires a power supply (See below)
Unit is in good condition. All original knobs - looks to be complete.
I have not fired it up as I do not have a way to do that easily.
This is the matching receiver for the Elmac A54 and AF-67 transmitters.
Covers 160-10 meters on AM and CW.

Available for $50.00 plus shipping

3) Multi-Elmac 6V DC power supply - presumably will work with either
of the receivers.
Available for $30.00 or for $25.00 with either radio receiver above.

See N9BOR's site for pictures that will give you an idea of what these
radios look like if you are not familiar with them.

And make sure all of the cabinet to chassis mounting screws are in place.
I've received numerous heavy boatanchors that had damage due to missing
rear chassis to cabinet mounting screws not in place. Foam is great, but
the radio must be ready for shipping before packing.

It is amazing how badly a lot of items get packed. I take in a lot of e-bay stuff for a friend overseas. I have to repack nearly everything because of the materials being used. I see a lot of damage because wads of paper are used for packing, or the item is so heavy and the box so flimsy that the item drifts to a side and gets banged up. Some people just don't have a clue.

2345. Re: Who does 'Foam-in-Place' packing in Tacoma, WA area?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-28 17:51:56 UTC
From: Stan <swperk@earthlink.net>
Message-ID: <3D95EC3C.9B337F4F@earthlink.net>
Source record: 38367
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

I feel exactly the same way. I think that *most* people don't have a clue as to how much abuse a package can suffer during shipping. UPS had (and may still have) the following packing guideline:

"Make sure that your item(s) when packed will survive a three foot drop onto concrete."

Not coincidentally, the height above ground of the floor of a UPS delivery van is about three feet. I've seen some drivers, in their haste to get unloaded and on their way again, literally kick packages off the back of their vans onto the ground.

So I continue to be amazed at the number of times I receive a heavy and delicate instrument packed in styrofoam pellets, crumpled paper, or styrofoam sheets as the only protection against damage (not to mention the problem of getting the styrofoam "crumbs" out of all of the nooks and crannies of the instrument because the shipper neglected to put it in a protective bag)!

My packing method for valuable and easily damaged items is:

1) Wrap the item in several layers of bubble wrap, paying special attention to display screens, knobs, connectors that project from the panels, etc. These may require protection with extra wrap, foam padding, or heavy cardboard.

2) Put it in a box just large enough to accommodate the wrapped item (no room to shift) and seal securely.

3) Put this box in a box large enough to allow at least 2 inches of space all the way around (at least 4 inches larger in each dimension). Use small styrofoam blocks to keep the inner box centered, then fill completely with peanuts or other padding for protection.

4) Put an extra shipping label inside and seal the box.

Although it requires a little more time (not much, actually) and an extra box, I've never had anything damaged when shipping it this way. It may not be worth doing for a $50 voltmeter, but it sure is for a $10,000 spectrum analyzer!

Foam-in-place is pretty good if done correctly, but be aware that the packing company can set the foam density to a wide range of values, making it more "squishy" or less "squishy." There is an optimal setting based on the weight of the object being supported, but the packers may not adjust as necessary. Rock-hard packing will protect from puncture

and minor crush damage (if thick enough), but does nothing to protect
against impact shock or major crushes. Conversely, packing that is too
soft will allow the item to shift as it compresses the packing, and then
it may end up resting dangerously close to the side of the packing box
with inadequate protection.

Kind of depends on how much power you want.

For tiny power a 555 timer and a transformer.

2350. ww2 bomber plexiglass

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-28 22:09:14 UTC
From: Robert Mozeleski <moz@ncx.com>
Message-ID: <upcddejmo27d1e@corp.supernews.com>
Source record: 38373

Question i am asking is about this piece of plexiglass. I think it came from a army electronic surplus store back in the late 60's
and might be from a WW2 bomber.
http://userweb.ncx.com/moz/plexi.jpg
At least that is what i think i remember my late father telling me. Would you know of anyone who could tell me if it is indeed
from a plane and possibly someone could use this for a restoration project. It is 18" diameter with 2 flat spots, raised
plexiglass. Looks like i giant dialcover of sorts. Any info or web sites to check out would be appreciated. Thanks...bob

Wal-Mart sells foam isulation in a can for $5 or so.

I used it to ship my FT-890. Find a suitable box, put a 4" pc of 2X4 in the box, put the radio in a plastic bag, place the radio in the box, shoot the foam all around it, let it cure an hour or so, close the box on top, flip it over and remove the 2X4, and send it on its way.

As we are seeing in financial, medical, media, and legal areas, the vast quantities of information available to non-specialists will mean the undercutting of elites. What will teachers do when their students come to class often understanding more about the subject being taught then they do themselves?

2372. FT: Collins 75S-3B/C AM filter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-29 16:29:22 UTC
From: k6sde <sp@m.me.not>
Message-ID: <3D972A6D.A4525DE1@m.me.not>
Source record: 38195

I'd like to trade a plug-in Collins AM filter for the 75S-3B
or 75S-3C for either of the following for the 75A4:

* AM filter, 6 kc
* CW filter 500 cycle

Look at filter information for some pictures and my e-mail
contact information.

If you prefer:
http://home.attbi.com/~h1m/collinsfilter.html

Thanks for looking!

2373. Need NC-303 Pricing Help...More Info

Thanks to all who replied to my previous posting. I have an opportunity to buy this receiver with the XC-303 calibrator. This guy would probably remove the calibrator and sell me the radio for $350. For an additional $150, I can have the calibrator, too. I just want to make sure I'm getting a fair deal. I am inclined to buy this, but would like your opinion first. Thanks a million.

73,
Ed NI6S

Seems a bit steep, but you have two things to factor in:

If the radio is local and you can pick it up, the shipping savings is substantial.
If you can see and try the radio, add a bit more to the value.

Pete

2375. FS: RS31g WW2 German power triode

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-29 17:57:38 UTC
From: arnoldg@c2i.net
Message-ID: <3d973fda.8115594@news1.c2i.net>
Source record: 38198

Hello,

I have one of these very nice vintage power triodes in stock. RS 31g
was made by Telefunken and have some similarities with the RS 237
which is not far from 211.
The heater on RS 31g is 10V 4.8A, anode dissipation is 65W and max
anode voltage is 1600V. The valve is NOS and in its original box. The
price is NOK 910.- or about $ 120.- You can find a picture and more
data, and you can even order it from my web site: www.demostenes.no
Just search for RS 31g.

Regards,

Arnold Goks�yr
DEMOSTENES - N6899 Balestrand, Norway
Tlf. +47 5769 1340 Fax +47 5769 1267
http://www.demostenes.no

Thousands of different valves in stock as well as
sockets,transformers,books,caps,resistors and
other components. Web site is updated every week.
You can order on-line.

<< I am inclined to buy this, but would like your opinion first. >>

It was a good receiver in it's time, but there are much better, modern receivers such as the Icom R-71 (with power supply), for that kind of money.

But if you want it as a collector item, and it's what you want, you should buy it.

Don

2379. Not quite a Vibroplex

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-09-29 21:17:41 UTC
From: really61763164@yahoo.com
Message-ID: <4f893d74.0209291317.4bc5ac51@posting.google.com>
Source record: 38202

Hello
I've come across a strange key, first thought to be a Vibroplex, but
after viewing a gallery of Vibroplex keys this key is obviously not a
Vibroplex. This particular key looks almost exactly like the 'Japanned
original',
except for the square bar (for lack of better terms) at the end where
the key itself is (the square piece that is higher than anything else
on it's base).
I apologize for the lame terminology.

At any rate, this piece is not seperated but molded to the base and
it's a bit wider and round
The front of the key has a plate like a Vibroplex (and in the same
position), bit it's too old and rusted so therefore it cannot be read.
All I could make of the plate - "Radio" in the top left corner and
"Mass" in the bottom right.

I know this is extremely vague, but it would be appreciated very much
if anyone could offer help on identifying this unit.

Thanks

Source record: 38206

Good advice. I cover much the same ground in the article at
http://antiqueradio.org/howpack.htm . I refer sellers to this page *before*
closing the deal, on the increasingly rare occasions when I buy anything
long distance. If they won't agree beforehand to pack to my satisfaction, no
deal.

Someone else in this thread recommended using spray foam insulation from
Wal-Mart. Is that the same stuff used by professional packers? (Not that
"professional" necessarily means a lot :-)

I have a Johnson Pacemaker, but probably a little rough for your
taste. The front panel is nice, but not perfect. The cabinet needs
repainting, the rig needs tubes and I'm sure needs "tech"ing. $200
Near Detroit, Michigan.

I'd trade for your gear - working or project.

I have several pcs of the power output pentode Telefunken EL 153 for
sale. The valves are all NOS and unused. Power dissipation is 40W and
the valve has many similarities to EL 156.
The price is only NOK 400.- each - about $ 52.- Picture and
technical data on my web site - www.demostenes.no Just search for
EL 153 in the left hand corner.

Make that two Pacemakers, in the same shape.

Mine's got all the tubes - it's been on the air, and all of a sudden, the finals cherried up (while in standby) and blew a fuse and probably the bias supply (I'm thinking). That was 10 years or so ago, and now I could probably go in there, and trouble shoot the thing and change out the 6AL5 bias regulator and fix what it took out and make it work again, but I have to ask myself - Why?

Same price as above, from another Jeff :-)

QTH.net, part of QSL.net, which provides many lists and services
to the radio hobbyist community, will fold and go off-line in days
without some financial support from the users.

I just PayPaled them $15- a tiny price to pay for the
wealth of knowledge and fellowship provided by QTH.net.
Any level of contribution is welcome.
Won't you help, too?

From the QSL.net sysop:
There are few bargains left in this world but I see this as one of
them. Please contribute to the funding of this site. I suggest $15,
less than an ARRL membership, less than a nice dinner out with the
family but so important to our future.
The choice is yours.
I can't continue without your help.
If you care to contribute, please do it today.

I thought the idea was that they did not have an open spark and therefore
would not initiate a flame, thereby preventing the radio room from burning
in the first place when it was full of leaking JP-4.

The little AN/PRT-4 transmitters are currently a glut on the market.
Fair Radio has as-is ones for $8 with crystals already in the middle
of the 6M band.

Problem is, there doesn't seem to be any real service info on them.
I have the TM 11-5820-549-12 which claims to be the operator and
organizational maintenance manual, but it is very slim on real service
information and has no schematic.

Anybody got a schematic for these beasts? I'd love to see one. They
are just so neat and compact. I got a couple for hidden transmitter
hunts.

Cross-posted to:
rec.radio.amateur.homebrew,rec.radio.cb,rec.radio.swap,rec.radio.amateur.boatanchors,misc.industry.electronics.marketplace

Really nice capacitor bank with board and eq resistors already
mounted.
It has the screw type filter capacitors. They are mounted on a
commercial made PC board with eq. resistors. It consist of 15 -
1500mfd @ 450vdc
computer grade capacitors in series. There is room for one more cap,
of
which I have a couple of spares 17 total caps. There are also some
extra resistors mounted on the board you could use to add the last
one.
That would give 93 mf at 7200wvdc. That is nothing to sneeze at! Most
of the HARD work is already done for you.
Great for your next high powered project. It will fit in a standard
19" rackmount chassis it is 6" tall 9 3/4" depth
Figure about 25lbs packed weight shipped from 28681 would like 100.00
+ shipping open to offers I could use 2 oil capacitors around 20mfd @
5000vdc each Ok if cap is higher.ni4l@charter.net

What antenna relay are you asking about?

I don't see that you would want to switch anything. The tuner should be left in the line between the transceiver and the antenna so that it benefits both receive and transmit.

Jim:

On the assumption that you don't want to permanently modify the unit by removing the relay, I would simply wedge the contacts closed with some convenient insulator. This will force the relay into the transmit position and allow you to use the coaxial connector input to the matchbox for both transmit and receive with your transceiver.

Just push it into the closed position. Jam some paper in to hold it in
place. End of problem.

Oh and that 275w rating is for AM Mode. You know...full carrier, double
sideband. You can safely times it by 4 for PEP.

I run a 800 w amp through mine with no sweat at all.

Check it out MFJ! No it doesn't mean you can multiply YOUR RATINGS by 4X.

Nobody mentioned MFJ.

Can you re-read the post and follow-ups for
comprehension?

I know that is a big word, comprehension, but
maybe your mom can explain it to you.

Now run along and play nicely, OK?

Comprehension must be defunct. The actual and original message was quoted, by
the in-duh-vidual who stated such claimage.

Allow me to demonstrate:

-=-=-=-=-=-
Check it out MFJ! No it doesn't mean you can multiply YOUR RATINGS by 4X.

-=-=-=-=-=-=-=-=-=-=-

I *CLEARLY* view the words "johnson" and "matchbox" (no "Mighty Fine Junk"
was ever called a 'matchbox'), and THE Johnson Matchbox was INDEED
created to handle 275w of AM Carrier with double sideband, and no reduced

nothing.

I'd say that multiplying the rating of 275 x 4 (= 1100w!) is probably a
conservative
rating, at that.

Well let me explain it to you Gary. It was a jibe at MFJ, a company that produces antenna tuners that are consistently overrated as to their power handling capability. Perhaps it was you who "Ran along and played" when you should have been in English class.

Source record: 38133

Well it looks as though Quecan of Canada is going to try to shaft me on the Sunair GSB-900SC I purchased from them through Ebay.

I paid almost 500.00 for it plus 100.00 shipping. Upon arrival I found that there were problems in the power supply, It had a bad microphone, the power cord was missing, and that nine printed circuit boards were removed and missing.

I attempted to contact them and they avoided me for a couple of days. When they finally did I contact me I was told that it was sold AS-IS and I was stuck with it. I tried to get them to agree in either a partial or full refund or even to just send the boards. So far they have refused to try and correct the situation in any way.

While I can repair the problems in the power supply and even replace the mike cord, I do expect that the radio be complete.

Can I get any of my fellow green radio collectors to contact them and help get this resolved.

The contact person is Christiane Boplduc
813 St-Jacques

> If you've got one, please let me know price and model.

You can probably get by with something less, since the legal output ceiling is 1500w PEP.

Perhaps not, though...

Check out one hams thoughts about Asymmetrical modulation.

Basis is:

Everyone seems to think that in order to modulate a kW, you have to have 500w. This is true, if you're using a sine-wave to modulate the kW with. The human voice is -not- symmetrical, in it's very nature.

Here's the message, from the AM Reflector:

-=-=-=-=-=-=-
I've be working on a document that might be of interest to many folks. With the help of K4KVY, WA3WDR, W5TOB and a month or two of night work I've come up with something good I hope. Anyway here it is.

http://www.qsl.net/wa5bxo/asyam/aam3.html

I hope it is of some use to someone and encourages experimentation.

I have a beautiful Zenith Y600 Transoceanic receiver for sale. It is cosmetically a 8 to 9, and works great. Has the original owners manual with separate schematic and alignment info. The shortwave chart is there and complete. I can send pics if interested. The only flaw I can see is one of the gold inserts is missing. Antique Electronic Supply has replacements for less than $10 for a pair. It works on all bands.
$125 + shipping.
Thanks
Tim
